TINKER TOM'S TALKS.

No. 292

Well, Well!

Here we are again with the old salutation that has greeted the dawn of each New Year since measured time began.

For 292 weeks we've said our little piece and gone back to work—enjoying every day of it—through good times and bad—glad to be of service—to have established and operated for mutual benefit a new Canadian industry.

For your kindness—your patience and forbearance—as well as the business which came our way, we thank you. Every last one of us is lined up to give you Premier quality—lowest price and improved service in 1921—We are ready to do our part in making it

A HAPPY AND PROSPEROUS
NEW YEAR

TINKER TOM

We Believe That:—

A Little
"Straight Talk"
to the Canadian
Plumbing Trade

1. Goods and services must be sold at a profit.
2. "Do unto others as you would be done by" fully defines the ethics under which this industry will flourish most.
3. Proper accounting methods will cut costs, stimulate sales and reduce credit risks.
4. The whole industry, including the contractor, must go after business if they wish to get what they deserve.
5. Local newspaper advertising on the part of every contractor is just as certain to develop business in this industry as in any other.
6. The contractor who operates a modern store, equipped to give service equal to that offered by other lines, is bound to profit accordingly.
7. The chain of discounts from manufacturer, to jobber, to contractor, must be so adjusted that each gets paid fairly for the function performed.
8. Any action taken by one division of the industry, which affects another, is seldom satisfactory unless each division affected is represented in the consideration ahead of such action.
9. The public should be enlightened concerning domestic sanitary engineering, heating and ventilation, the value of these services and the problems involved.
10. Quality—of material, workmanship, and service—will bring lasting approval and increased profits in its train, as irresistibly in this industry as it does in every other.
11. Every contractor, jobber and manufacturer should belong to and attend the meetings of the association representing their respective interests, for only through associated bodies can the greatest efficiency be created in any industry.
12. Sanitary legislation should be modified so that it will not destroy the prestige obtained by the firm of long business experience and place them on a par with the irresponsible.

Plumbers Sell Sanitation

Homes have sanitation or they do not—there is no half-way mark—and civilization cannot progress rapidly unless there is complete sanitation in every household. Thousands of homes are now healthy, happy, and

livable through the promotion of sanitation by the plumbing trade. Yet there are abundant opportunities where Sanitary Equipment is badly needed. Let us continue to build bigger, better business together.

JARDINE and TOLEDO PIPE-THREADING TOOLS

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo has no cams or gimcracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

"Toledo" Geared Adjustable Threading Tool,

Plumbing Supplies Outlook for 1921

Pendulum Will Swing Forward When Public Confidence in Prices Is Established—Big Opportunity in Construction Industry
—Cost Plus Percentage Contract Does Not Stimulate Confidence
—Copper Shows Stronger Tendency

A NUMBER of opinions dealing with conditions in the trade and with particular regard to the business outlook in plumbing and heating supplies have been secured by Sanitary Engineer to give the trade some idea of what manufacturers are planning for during 1921.

Expressing hopefulness for a good year, A. J. Dickey, general manager C. A. Dunham Co., Ltd., manufacturers of heating system specialties, Toronto, gives it as his opinion that public sentiment is the greatest of all sources in determining good or bad conditions, whether it be socially or industrially. He speaks of it as the force that makes the pendulum of business move first one way, then the other.

"Right now," says Mr. Dickey, "public opinion (distrust) is swaying the pendulum backwards, and the reaction caused by many unhealthy conditions during and since the war. How much further the pendulum has to swing no one knows.

"This much is sure, the pendulum will not swing forward again until public opinion (distrust, mainly centred in unstable prices) has changed to public confidence in prices. This cannot come about until every man in business has made a determined effort to improve efficiency, whatever the schedule of prices may be or on whatever level.

Lack of Confidence From Inefficient Production

"The present period of lack of public confidence has resulted from lamentably inefficient production. We have evidence of this in the construction industries possibly to a less extent than in many other lines, but nevertheless real.

"The year 1921 is glistening with opportunities for business in the construction industries. Projects are badly needed. What is now needed to turn these into real projects, *under way*, is confidence in prices. Prices will be higher than the old schedule but they must represent *full values*, on the basis of *efficient production*."

High building costs resulted from lost time, wasted time, and in many cases paying a schedule

of wages that was not earned. This was evident in the erection of buildings as well as in the making of many of the products entering into buildings. When the public feel that they are getting full value for the money invested in new buildings, the industry will hum.

Cost Plus Basis Doesn't Stimulate Confidence

The cost plus percentage plan of contract work is not one that will stimulate this confidence in spite of the claims made that with declining prices the owner would be ahead. The owner is skeptical of the inefficient handling of his work. A straight contract price that secures and gives reward for efficient work is the basis on which public confidence will be awakened in building construction. Whether this comes with 1921, remains to be seen.

Next Year Will be Active

Stating that daily reports received from various sections of the country indicate that next year will be very active in such lines as water, gas and plumbing brass goods, castings and forgings, an official of H. Mueller Mfg. Co., Ltd., Sarnia, Ont., states as follows:—

"As we all know, there is a very great scarcity of houses at the present time, and according to Babson's reports, as soon as spring opens up there will be a great rush to build houses. This will mean, of course, considerable stimulation in lines of business in reference to building, plumbing and other necessities in that regard. Large numbers of architects are quoted as saying that 1921 will see the greatest amount of building that we have ever experienced.

Copper Shows Stronger Tendency

"Copper is quoted at a price considerably less than it has been for years, but at the time of writing shows evidence of renewed strength. The present price is lower than is justified by the cost of production, and it is believed when buyers come into the market with preparations for a good season that next year will see higher prices in copper.

Labor More Efficient

"Labor is becoming considerably more efficient

than has been the case in the past. Men are anxious to turn out as much work as possible to hold their jobs, and we find them in a better frame of mind and not so independent as has been the case in the past. Every dollar spent for wages brings in more than a dollar spent in 1918 and 1919. Wages, including freight rates, will offset to some extent the lower cost as the result of this more efficient labor or greater production on the part of employers.

"Buyers could assure themselves of prompt shipment of orders if they would only place them now, but unfortunately the tendency seems to be to postpone ordering until the last possible moment because, in view of other reductions in certain lines, they feel sure that plumbing goods will drop as well.

"We have tried to influence customers to take advantage of the slump at the present time to place orders for delivery January 1st, or after, but it is not having as great an effect as we would wish. As one writer has put it, all buyers are working along the same lines as the hunger strikers, that is, refusing to buy until prices come down, but in view of the fact that when prices did go up the rise was gradual, so also in this case we look for drops to be gradual.

"All manufacturers in our line are exceedingly optimistic for next year, and look for a flood of orders starting about March or April."

"During the latter part of this year and in fact all through this year, intending builders have held back, hoping for more settled conditions and reduced prices and at the present time there must be a large accumulation of work of this description which has been held back from time to time, and while this condition has reduced business for the latter part of this year, we look forward to greater activity in the early part of 1921," says H. O. Morris, assistant general sales manager of Steel and Radiation, Ltd., Toronto.

"We have great faith in the future, especially so far as Canada is concerned, and do not think there is anything that can stop prosperity in this country."

Pointing out that business in sanitary enamelled goods is likely to remain quiet for a short time yet but will revive on the expected resumption of building, C. A. Lusby, secretary-treasurer of the Amherst Foundry Co., Ltd., Amherst, N.S., states as follows:

"The market for sanitary enamelled goods depends largely on the building operations throughout the country, which, as you know, have been of very small extent during the past year, owing largely to the high cost of materials used in the construction of buildings. Notwithstanding this, business has been fairly good with us along this line, but it has now ceased almost entirely. We think during the next few months business will be very quiet, but when raw materials used in building decline in price, there should be a good demand for

Charge of Collusion Investigated

Roebuck Report to Ontario Attorney-General Says No Grounds for Charge Re Price Agreement Among Supply Houses—Other Charge To Be Investigated

A REPORT regarding the alleged combine in regard to plumbing prices and as to collusion between the Master Plumbers and the Plumbers' Union, in Toronto, has been made to the Attorney General of the Province of Ontario, by A. W. Roebuck, of the law firm of Mackenzie, Roebuck & Gordon, who has been investigating the matter at the request of the Attorney-General. So far this official has declined to discuss the report or what action he contemplates taking. He has pointed out, however, that investigation has shown that the main charge is that the members of the Master Plumbers have endeavored to exert some control over plumbers generally, resulting in some employing plumbers being unable to get men. The charge was made by a member of local 46, that such control was exerted to endeavor to force all master plumbers to become members of the master plumbers' organization.

"This condition may have existed about six months ago but I doubt if it is the case today," said the Attorney-General. "It seems that the complaints were over large jobs and not small ones."

No Complaint re Prices

Hon. Mr. Raney states that Mr. Roebuck has reported that there is no complaint regarding prices charged by the supply companies. The latter was the chief point of contention as far as the

public was concerned, and local agitations for a full enquiry into prices on plumbing supplies were commenced on the basis that the continuation of high prices unnecessarily was helping to restrain building activity. It was thought that because there was uniformity in plumbing supply prices there must be some measure of price understanding or agreement. The anti-combine law distinctly prohibits price combinations of the type that must be formed to make a uniform selling quotation for various classes of plumbing supplies, and no doubt action could be taken if such were proved to exist. Mr. Roebuck's assurance on this point therefore clears the air.

Regarding the other charge of collusion between the masters and journeymen plumbers, it is understood that the agreement between the union and the masters; but which does not appear in writing, is that the association will get first calls on the plumbers. This is one of the points to be investigated and it is possible that a commission will be appointed to deal with this matter, on the recommendation of Mr. Roebuck.

Interviewing a master plumber who is not a member of the association it was pointed out by him that he could now get any plumbers he needed on a big contract but a short time ago he could not. Lack of employment has changed conditions somewhat recently.

enamelled sanitary goods as there is a great need of building throughout the country.

"Regarding stoves and hot air furnaces, business during the past few months has been very good. We find, however, that recently the market has

dropped off almost entirely and we think it will be very quiet along this line for the next few months. Of course, the autumn is the most active season for stoves in any case. We expect business will pick up again during next summer and autumn."

Price Changes in Plumbing Supplies

A comparison of prices of plumbing supplies of the present date with those in effect on January 1st, 1920, shows an average increase of nearly 10 per cent.

The advances have been largest on manufactured goods, and the decreases are chiefly on lead products and ingot metals which are lower in price than a twelvemonth ago.

In the following table 100 is taken as the index figure, and 125 would mean an advance in price of 25 per cent., and tin, which is indicated by the figure 70, has declined 30 per cent.

Montreal Master Plumbers in Convention

Report of Strike Committee—Membership Doubled in Three Years—Practically All Officers Re-elected—Assistance of Plumbers in Framing Montreal Building By-law—Outlook is Bright.

MONTREAL.—The Master Plumbers' Association of Montreal concluded at its annual meeting held in the Builders' Exchange last week one of its most successful years since it obtained incorporation in the Province of Quebec, which was assented to on January 12th, 1895.

Reports from standing and special committees were received. Officers were elected, and a program of activities outlined for 1921. D. A. Bethune presided over a large, representative and enthusiastic gathering.

J. E. Walsh, acting in the unavoidable absence of James Ballantyne, convener, submitted the report of the Strike Committee. He recalled that Local No. 144 of the International Union of Plumbers and Steamfitters had gone on strike on October 5th, and as certain unpleasant episodes had taken place during its course the association had found it necessary to apply on November 5th to Mr. Justice Bruneau of the Superior Court for an interlocutory order of injunction to enjoin the business agent of this local, his servants, agents and employees to refrain from all intimidation, molestation, interference and picketing of the members of the Master Plumbers' Association of Montreal and its servants and employees until the court shall have finally passed upon the merits of the action. Mr. Justice Bruneau immediately granted the required order. Since then the Strike Committee has considered, in consultation with the association's law agents, the advisability of endeavoring to extend the scope of this injunction, as had been successfully attempted in cities in the United States, notably Detroit, but was not yet prepared to report a definite conclusion. However, during the next month some important developments were to be expected.

Secured Police Protection

Further, Mr. Walsh reported that since October 5th the Strike Committee had made suitable arrangements whereby police protection was given to the mechanics employed by the members of this association, and by which plumbers and steamfitters desirous of working for their members should have safe and comfortable transportation provided to and from their jobs to their homes. As a result of the arrangements made, their contracts and jobbing work had only been interfered with slightly and temporarily and specially as the co-operation of the members had secured that their fellow members who were pressed to have work completed by certain dates were amply supplied with the plumbers and steamfitters they needed. For the

future, Mr. Walsh assured the meeting, they need have no fear as the Catholic and National Workers' Syndicate, with whom they had an agreement, and which was being loyally observed by both parties, was increasing in strength and influence daily. The Strike Committee ap-

D. A. BETHUNE

Re-elected president of the Montreal Master Plumbers' Association at the annual convention.

preciated the loyalty of the association in standing behind all their decisions and asked that as its work was not yet complete it be continued. The report was adopted unanimously.

Membership Doubled in Three Years

D. K. Trotter, the secretary, in presenting his annual statement, reported that within the last three years the association had doubled its membership and now included the largest and most reputable firms in the city. The financial statement submitted showed on current account a credit balance of over \$1,700, while all liabilities had been wiped out. Their capital account, which was largely an emergency account, was in a healthy and sound condition.

Next came the report of the Nomination Committee. It showed that its members this year without prearrangement were all past presidents of the association, and that they had devoted much time to the consideration of the claims and merits of members for the different offices. In their work of selection they had proceeded along the lines established in previous years, keeping in view also the by-law which stipulates

that the prevailing majority of the officers and committees shall be French and English in alternate years. But, on this occasion, precedent was disregarded by the meeting, which refused to accept the "slate" proposed, and the officers who had served the association so well during 1920 were with one exception unanimously re-elected. J. P. Linton, who had been second vice-president and had indicated his desire that his name should not go forward for re-election, was replaced by Jos. A. Francoeur. The officers for 1921 are therefore as follows:

Officers

President—D. A. Bethune.

First Vice-President—H. Lavigueur.

Second Vice-President—Jos. A. Francoeur.

Representative to Board of Directors of Builders' Exchange—T. A. Latourelle.

Chairman of Sanitary Committee—Jos. Brunet.

Chairman of Arbitration Committee—L. E. Moulton.

Chairman of Legislative Committee—A. Noel.

Chairman of Apprenticeship Committee—John A. Gordon.

Chairman of Price List Committee—J. E. Walsh.

Audit Committee—Messrs. Walton, Giroux and Daoust.

Trustees—Messrs. Delaney, Charette and Hardy.

David K. Trotter was unanimously re-appointed secretary and the association showed its appreciation of his services during the past year in a very substantial way.

Assistance in Framing Building Bylaws

D. A. Bethune in assuming the presidential chair for a second time, and after thanking the members for the signal honor they had conferred upon him, stated that all their meetings during the past year had been conducted with the utmost harmony and the spirit of brotherly co-operation among the members had never been greater than it was today. During the year now almost past the association had given great assistance to the city authorities in framing a new set of building by-laws for Montreal. The question of an equitable apprenticeship system had been considered and he hoped the apprenticeship committee would before the fall be in a position to submit a plan that would have the unanimous support of all the members. Throughout the year the associa-

tion had stood consistently for the policy of the "open shop."

Outlook Is Bright

The outlook for 1921 is regarded as being very bright, and it is pointed out that while building contractors did not have as much work as they could handle, yet master plumbers have had a very successful year. There was new work to be done and many people also

had a great deal of new sanitary work done in buildings which had been erected some time. With the expected increase in population and a scarcity of houses now estimated at between 5,000 and \$1,000, there is every reason to feel optimistic for the future and the trade anticipates plenty of work for the coming year.

What Other Papers Say

TAX ON MAKING UP STOVEPIPES.

"I wish you would explain in your valued paper," writes a subscriber, "why we small merchants must be taxed and annoyed to the limit of endurance." He carries on the business of plumbing, lighting, heating and tinsmithing, and he received recently from a large manufacturing firm, whose goods he handles, the friendly advice that "if you operate a tinshop or make up stovepipe you are classed by the Government as a manufacturer" and would be required to take out a manufacturer's license, costing \$5. "Until you secure this license," says the notice, "we will be obliged to charge you two per cent. sales tax on all invoices, but as soon as you secure a license and advise us of the number—which, by the way, must be stamped on all written orders—we will only require to charge you one per cent. sales tax. Will you please give this matter special attention, as we do not wish to be under the necessity of charging you the extreme tax of two per cent."

The present sales tax, therefore, entails extra labor and bookkeeping upon the real manufacturer as well as upon the distributor, whom in this instance it was intended to reach. Our correspondent continues:

"Because I employ one tinsmith to make up stovepipe and set up stoves I must pay to the Government a fee as large as a manufacturer who has a turnover of half a million, and I must employ an extra bookkeeper to keep books for this purpose. I pay for a retailer's license, I pay an exorbitant premium on accident insurance to the Government, on a preferred risk, where in fourteen years there has not been an accident; local taxes are also very heavy, but it does not cost all they collect to keep up this red tape. Now I am not complaining about revenue properly collected, but it looks to me as though some drastic action will be necessary to save the small distributor in rural districts."

The incidence of the sales tax as described by our correspondent undoubtedly is unjust to merchants and distributors all over the country, and the only explanation we can offer is that the Government requires to classify those who "make up stovepipe and set up stoves" under the heading of manufacturers in order to swell the list of them and to show what a blessing the protective tariff has been to the people of Canada.—Toronto "Globe."

CANADA'S BUILDING TRADE

Canada's building record for the month of November shows construction contracts awarded in all the cities, towns, villages and rural districts total \$15,399,200, as compared with \$18,169,500, and \$16,995,200 in November, 1919.

The total for the eleven months of 1920 is \$246,859,000, compared with \$181,131,900 during the corresponding months of 1919, and \$94,562,400 in 1918, an increase of 36.3 per cent. over 1919, and 161.1 per cent. over 1918.

In Ontario the contracts for November amounted to \$3,902,800, as compared with \$10,154,800 in October, and \$7,481,100 in November, 1919.

For the eleven months of 1920 the total is \$106,135,500 compared with \$82,431,900 during the corresponding months of 1919, and \$31,983,000 in 1918, being an increase of 28.7 per cent. over 1919, and 231.4 per cent. over 1918.

Where Heating Engineers' Work Ends and Plumbers' Begins

THE following report in an English trade paper deals with an interesting point: "Two of Manchester's municipal housing schemes—one of them the direct labor experiment on the Gorton Mount estate—have been impeded by a plumbers' dispute. It arose over the installation of the central hot water system, the plumbers claiming, as they have done on many other occasions, that as the supply was for domestic use the work was theirs. The heating engineers, however, also claimed the job, and matters reached a deadlock some time ago, so that neither side could proceed. The plumbers also left the other work on the schemes, but after the Manchester and Salford Trades Council had failed to bring the parties to agreement, the plumbers returned tentatively for a fortnight, on the understanding that the Ministry of Labor would take the matter up. Several conferences with a representative of the government department have taken place without avail so far, and the plumbers have not only again left work, but are determined to remain out

until the dispute is definitely settled. They contend that this class of work has never been done by anybody but plumbers, and forms the major portion of their job, in Manchester at any rate. Mr. Harris, the secretary of the Manchester branch of the Operative Plumbers' Union, claims that in all the other city housing schemes the architects have assigned this part of the contract to the plumbers, and that the Housing Committee has promised to do so in these instances—a promise that has not been fulfilled. The plumbers also claim that the work of heating engineers should be confined to the heating and warming of buildings, and that in this particular job they should install the plant and leave the distribution to the plumbers. The heating engineers hold that the dispute should be settled nationally, for where the plumbers' work begins and where the heating engineers' ends is no new question. Perhaps something lastingly conciliatory will result from a conference between the two affected unions, which has been arranged by the Minister of Labor for next week."

METER TORONTO WATER SERVICE

Toronto.—The Bureau of Municipal Research recommends the metering of all Toronto water services. It cites the 1918 consumption of 128 gallons per capita per day as excessive to the extent of about 28 gallons. It suggests that the waste which this involves should be stopped.

A LOST SEWER IN ST. THOMAS

St. Thomas, Ont.—Is there a lost sewer under William street from Wellington street to St. Anne's place of sufficient size to serve all the residents of that section of William street? County Police Magistrate Hunt claims that there is; that an eight-inch sanitary sewer was laid under the street railway tracks along William street several years ago, but, in some manner, was not included in the city's plans.

The Squire, accompanied by J. L. Jones, a new resident in William street, appeared before the Board of Health and reported their discovery and requested that the proposed sewer extension

from the corner of St. Anne's place and William street, along William, to Wellington street, be not carried out. The Board of Health members at the meeting were inclined to be a little skeptical about the matter and decided to call a special meeting in a few days to make a thorough investigation.

FAVORS SEWERAGE SYSTEM FOR ALMONTE

Almonte, Ont.—W. E. Scott, ex-mayor, believes that Almonte should have a system of waterworks and sewerage, and he suggests that steps be taken at once to secure proper information and evolve a definite plan which should be laid before the people next year. He would have a waterworks committee appointed whose duty would be the consideration of the whole matter and all questions pertaining to it.

Montreal.—A safe in the premises of the American Plumbing Supplies Co., 14 Craig St., was blown on Christmas afternoon.

Sanitary Appeal Sells Water Systems

Rural Dwellers Pay Attention to Statistics Showing Better Sanitary Conditions With Water System—Long Hours of Drudgery and Unhealthy Conditions Can Be Eliminated—Water Systems Pay Big Dividends—Farmer Buys Facilities of Less Importance

THE WASTE of woman power is one of the greatest menaces to the rural life of the nation, according to those who have made a study of such matters. A well directed investment in modern equipment for farm homes would prevent a large part of this wastage of the energy of the nation's rural homemakers and it is a very doubtful business policy for farmers to use increased income to buy more land instead of using part of it in raising standards of living so that women and young people will not want to go to the cities in search of more attractive living conditions.

The working day of the average farm woman is 11.3 hours and 87 out of each 100 women on farms have no regular vacation during the year. According to an estimate in 60 per cent. of the homes there is no water in the kitchen and the women must go to the spring or pump and carry all water needed for cooking, bathing and washing. Ninety-six per cent. of the farm women do the family washing, and only half have washing machines. Seventy-nine per cent. of the women depend upon kerosene lamps. Ninety-two per cent. do some or all of the family sewing. Ninety-four per cent. make some or all of the bread. Garden work is done by 56 per cent. and 60 per cent. have churning to do. More than 80 per cent. of the poultry flocks are cared for by women. One-fourth of the farm women help to feed and bed the livestock and 24 per cent. of them spend over six weeks in the year assisting with some part of the field work. All this is in addition to cooking the family meals, caring for the children and keeping a fair-sized house in order.

The installation of running water, a bathroom, a modern heating system, a lighting system, power to run the washing machine, churn and other labor-saving implements would release these women from most of the drudgery which now sends them to bed with a prayer "that their strength may be equal to to-morrow's duties." In other words, the farm home should be as well equipped as the up-to-date barn, which the practical farmer has now come to believe a necessity.

Appeal on Behalf of Women Folk

The use of modern facilities in the barn is equally as much advantage as in the home, but oftentimes a farmer can be appealed to stronger if the question of lessening the strain on the womenfolk and the improving of conditions

GREETINGS FROM THE PRESIDENT OF ONTARIO SOCIETY D., S. & H. E.

From the president of the Ontario Society of Domestic, Sanitary and Heating Engineers.

To the members of our society and members of the craft at large.

It is our desire to express to you, one and all, the wish, upon which our society is founded, viz., Greetings and Goodfellowship to all participating in the plumbing industry (all for one, and one for all).

In this period of unsettled conditions let us unite that we may prepare to weather conditions with least hardship, help the weak and console the erring. Remember, busy times succeed depression as well as night succeeds day. Keep a cool head and have a stout heart.

THOS. J. MINNES.

so the children will not wish to leave the farm are brought into it. There are many farmers of the old school who feel well enough inclined to continue their daily toil as they have always done, without the aid of modern facilities, who would be moved by an appeal based on actual figures as to how the housework could be lightened and lighting and water systems made to pay dividends.

The sanitary appeal is also an important one in connection with the installation of water systems. A farmer recently stated to Sanitary Engineer that if farmers realized the danger of contamination from closets located near the well water, they would be quick to take action towards more sanitary installations.

One Home in Five Has a Bath-tub

An investigation recently conducted by the U. S. Department of Agriculture, after a nation-wide canvass of farmers' homes, showed that while only one home out of every five had a bathtub, nine out of every ten homes had sewing machines. This condition indicates that the true importance of sanitary equipment is not appreciated as it should be. Under the conditions described, the labor-saving and money-saving factor was appreciated and a sewing machine purchased, but the health-saving quality and the improvement of farm conditions were overlooked in neglecting to instal a water system.

It was found that in the barn and for outside work on the farms there were all sorts of equipment and conven-

niences in use. It was in the homes of the farmers' families that the lack of sanitary equipment was found. The following figures compiled by the Department of Child Welfare at Washington show the need for sanitary facilities in the home.

It was found that:

Where water must be carried into the house from outdoors, the death rate of babies is 198 out of every 1,000.

Where water is piped into the house from city services, the death rate decreased to 117 out of 1,000.

Where there are bath tubs connected with running water and sewerage, the death rate decreased to 72 out of every 1,000.

In homes where there are water closets, the death rate is 108 out of every 1,000.

While the statistics given here refer to conditions in the United States, they are equally, if not more, relevant to Canada. Plumbers will not wonder why nine out of every ten homes have sewing machines when they consider how active agents for sewing machine companies have been in canvassing the farmers' homes and how lax has been the effort to educate the farmers along sanitary lines.

Plumbers, in placing these facts before farmers, as sewing machine agents have done, will bring them to the right point of installing sanitary equipment in the home, that is necessary to health, comfort and prosperity.

Buys Articles of Less Importance

The claim is made by some students of economics that farming must be more profitable before farmers can afford such conveniences. It has been proved, however, that the farmer has spent money on facilities which have less value to him than water systems and it is one of the strongest arguments in favor of water systems that their installation can be made to pay dividends in the shape of better living conditions, improvement in the health of every human being and animal on the farm, and the resultant increase in efficiency and production as a result. Many plans to assist the plumber in selling water supply systems have been outlined in Sanitary Engineer from time to time, but these suggestions may be linked up effectively with other efforts.

Farmers during the winter months have more leisure than in the summer and it is therefore a good time for plumbers to go strong after the busi-

(Continued on Page 36)

EDITORIAL COMMENT

PLUMBING TRADE OUTLOOK FOR 1921

AN active year in plumbing supplies is expected next year by a number of manufacturers and jobbers in expressing an opinion as to the trade outlook for 1921. As in nearly every line of business, lack of buying interest has been brought about by a lack of public confidence in prices. People generally do not believe present prices represent a normal level, and until the maximum efficiency is reached in production this distrust will continue. It has had a very restraining effect upon the building industry. It is not expected that prices will go back to pre-war levels as a general decline; on the contrary, prices may well be expected to settle higher than the old schedule, but if they represent full value on the basis of efficient production, then people will buy.

The cost plus percentage contract basis in building is said to rather restrain than encourage building. It indicates that the market for materials is by no means steady, and that someone must take a chance in building under such circumstances. The contractor will not take the chance and the builder dislikes to do so. A straight contract price that secures and gives reward for efficient work is held to be the best basis on which to encourage building. Buyers of plumbing and heating supplies are slow in ordering under such circumstances, but it is expected that if the expected signs of a return to normal conditions begin soon to materialize, that trade will revive. Meanwhile the efforts which plumbing and heating engineers have been called upon to put forth to secure business from existing buildings will help to greater efficiency in business which should bring greater rewards to the trade in years to come when new building adds its usual zest to the business now being secured.

MAKING STRIDES IN SANITATION

ONTARIO has made good strides in the past ten years to insure pure water for domestic use from municipal waterworks systems. The fact that pure water is essential to good health does not indicate much, and its true significance is lost sight of in such a statement. Before the development of the science of bacteriology the association of water with certain diseases was largely conjecture from coincidences of the prevalence of the disease and the use of water from a particular source. The cholera outbreak in England in 1854 was traced to the pol-

lution of a particular well. Recent investigations have suggested that diseases other than typhoid are associated with water impurity, and that a reduction in typhoid rate means improvement in the general mortality rate.

A movement for the improvement of water supplies in the United States and Canada naturally followed laboratory findings, but was handicapped by an uninformed public. The Province of Ontario was affected by the prevalence of the disease in the State of New York, the States of the Middle West, and the flow of population across the boundary. Improved legislation was granted the Provincial Board of Health in 1912, and a renewed effort to improve existing water supplies was undertaken. What has been accomplished places Ontario in a leading position so far as typhoid reduction is concerned. With a mortality from this disease in 1919 of only 5.6 per 100,000 of population, as compared with 31.5 ten years ago, Ontario may be said to be making big strides in sanitation.

INVENTORY AND ACCURATE RECORDS

THE importance of plumbing and heating engineers making a careful inventory of stock on hand at the end of 1920 cannot be over-estimated, particularly in view of prevailing conditions. On an advancing market it is comparatively easy to take profits and the dangers of neglecting records are minimized, but conditions have changed, and buyers are holding back waiting for lower price levels. The condition calls for more attention to records and the cleaning up of stock so that the plumber will know exactly where he stands, and be able to guide buying accordingly in future. In a declining market the stock on hand should be inventoried at actual cost price, or if it has declined, the replacement cost should be noted. Some merchants adopt a depreciation column for depreciation in values. Clean, accurate records are much to be desired in the plumbing trade. They are largely responsible for the success achieved by many in the trade. Bankers are always much more inclined to extend any needed credit accommodation if accurate records are kept. A good bookkeeping system should also be used, and if both inventory and bookkeeping have been neglected in the past it is good now, at the beginning of 1921, to adopt a new policy. A good bookkeeping system is outlined in this issue.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

Article No. 23 of the Series—Illustration 30-31

(Continued from last issue)

THE liquefying septic tank has many advantages over the sedimentation tank owing to the decomposition of part of the sludge which is a great saving in cleansing operations. Still the clarified effluent from a liquefying tank is very much more offensive and stronger, thus it places more work on the oxidizing filtration area caused through its longer contact with the decomposing sludge and the suspended solids in solution which form compounds during the process of purification so that whilst the septic tank reduces to a certain extent one of the greatest evils in sewage disposal—namely the sludge problem—yet again the clarified effluent from a settling tank does not require the same amount of treatments as that from a liquefying tank, but until some other more economical system is adopted for the destruction of sludge, there is little room for doubt that the best and cheapest form of tank installation for small communities is either a well-designed liquefying tank or modified type of same.

The longer sewage can be detained in the tank the greater the destruction of organic matter and the less offensive will be the sludge, so that in practice a limit must be drawn for economical construction on the tank accommodation.

In designing septic tanks suitable for large buildings the constructional design can follow those previously illustrated for private houses except the sizes should be increased (which must be governed by the number of persons this installation has to accommodate).

Fig. 31 illustrates a combined single chamber septic tank and artificial filtration bed, suitable for

FIG. 30

a large mansion where the adjoining land cannot be utilized for filtration purposes. The septic tank is similar to those previously described having concrete baffle walls protecting the inlet and outlet openings. Current breakers constructed of wood can be placed below the inlet baffle wall to break the velocity of the incoming sewage and prevent disturbance of the deposited sludge, if considered necessary, by nailing same to the wooden plugs built in the concrete walls.

QUESTIONS AND ANSWERS

Question.—I have a shop and apartments job containing in all 2516 square feet of hot water radiation. The boiler capacity is one, 1800 and one 100 square feet. The cubic contents of each shop and other rooms are as called for in the architect's lay-out, as per blue prints sent herewith.

I am informed by an expert that boiler capacity is not sufficient and that boiler should be of about 3800 square feet capacity in all.

During cold weather the occupant has to keep shoving boilers and putting coal in the magazine continuously and burning about 50 tons each season, due to having to force the boilers.

Should not this job have much larger boiler capacity than 2,800 square feet?

You will notice that radiators containing only 18 square feet have same flow and return connections as ones from 30 to 60 square feet. Is this not wrong?

Please give me any information you can as to how I can get out of the trouble, as I wish to have job put in first-class working order and to have same operate as economically as to fuel and labor as possible.

Thanking you in advance for this assistance.—Ottawa, Ont.

Answer.—The plan does not give as much information as we should have before giving definite answer to the question asked in your letter. We can, however, consider that the conditions affecting the radiation required are similar to those that might be found in a building of the same size situated in your city.

The cubic content of a room is not a safe basis from which to figure radiation; the exposures and the glass surfaces must be taken into account.

We are assuming that the glass surfaces in this building are of the usual standard proportion to the floor areas of the rooms when the windows are set, and that the desired temperature is 70 deg. above zero when the outside temperature is 25 deg. below.

With the data given on your plans, and with the figures assumed by us, we have reached the conclusion that the boilers installed are quite large enough to heat a building of the size shown on the plans.

It appears that there is more direct radiation set in the store than is actually required.

An engineer making a superficial examination of the building might very easily make the mistake of supposing that the boilers were too small for the load of radiation installed. For the usual way of figuring radiation, the boilers are too small, but in this case it is a matter of having more radiation than is required.

Each store has 531 square feet of radi-

ation. This is about 230 square feet too much.

The radiation in the living quarters is not much in excess of what it should be; but it might be better balanced. The living room has a radiator of 58 square feet; it should have a radiator of 65 square feet. The maid's bedroom has 52 square feet; thirty-eight feet should be enough.

As an example of the unbalanced lay-out of the radiating surface we may compare the sizes of the radiators shown in the living room and in the maid's bedroom.

Here are two rooms, one of which is

lighted by a large bay window; the other has, likely, a much smaller window. One of these rooms has a greater area of exposed wall surfaces than has the other; yet both of these rooms have almost equal areas of heating surfaces in their respective radiators.

The plans do not show the piping lay-out; so we are unable to state if any of your difficulties come by reason of faulty design of the piping arrangement.

The radiator tappings approximate the usual practice for plants of this kind.

The boiler appears to be almost too far from the flue.

We do not think that you should burn more than 40 tons of anthracite (No. 1 buckwheat) coal during the coldest of heating seasons.

NEW PLUMBING GOODS

NEW HUMID AIR APPLIANCE

The condition of the atmosphere of our homes is of such importance to the health of our bodies and vigor of mind, that warming and humidification, two closely allied subjects, are receiving more and more attention as sanitary science advances. The temperature found to be most agreeable to persons not engaged in bodily exercise, viz., persons sitting or lying, is 64 deg. F., provided the air is not too dry. To heat air at 0 deg. F. to 70 deg. F., without adding moisture,

to ensure as near as possible perfect living.

Several devices have been put on the market with varying degrees of success in the past, but most of them have been either too expensive or too complicated in their operation. The Humid Air Company of London, Ont., have just brought out a device that is said to be both inexpensive and simple in its method of operation. (See diagram.)

The "Humidifier," as it is called, carries cold air from outside the building,

causes the air to become "water hungry," and as air demands moisture it will get it from somewhere, and if it is not added will draw it from our bodies, furniture or anywhere it can get it.

Dry air at 70 deg. F. is not as warm to humans as air containing the proper degree of moisture is at 60 deg. F. We have found out just what kind of air is needed for works of art, manufacturing plants and cigar factories for the proper handling of the different products, but have not, until just recently, paid any attention to keeping our homes at the right degree of heat and moisture

passes it into a pan in the smoke-pipe of the furnace, where it is heated and thoroughly humidified by contact with moisture-laden felt-wicks, and then the air, hot and moist, passes through to the living room of the house. The main advantage of this contrivance lies in the fact that it takes its heat from what otherwise would be waste heat. Its makers claim for it the distinction of being the only humidifier in the market that can be regulated to give exactly the desired quantity of humidity to the square foot, neither too much nor too little.

When this inventory is complete, file away with the other papers in the folder.

Labor and Material in Unfinished Jobs

No. 5.—This is an item frequently left out when taking an inventory. It may be that some contractors have not the necessary information to arrive at exact figures for this item. This should not prevent some figures being made up even though they are based upon estimates. If this is done, under-estimate the amount rather than over-estimate it, and use cost prices in all cases. Make records to show how the figures were arrived at, giving the amount of labor and material separately. File in folder with other papers.

Fixtures, Tools and Delivery Equipment

No. 6.—The information covering the quantities of these items will be on the inventory. They should be priced at their present value.

Personal Accounts Other Than Customers'

No. 7.—These accounts will not be found in every office. Frequently the contractor, or individual partners have personal accounts on the books covering withdrawals of cash at various times. These accounts, however, should not be confused with the account representing their investment in the business. That particular account is separate and distinct and, for a single proprietor, should be headed under the individual's name, thus: John Smith, Net Worth Acct. If a partnership exists, there should be an account with each partner covering his investment in the business. These accounts, for a partnership concern, should be titled (Partner's Name), Investment Acct.

Sometimes there are accounts with employees and outsiders for items other than sales. The details of each account should be made up on a separate sheet showing the net balance due, to or from the business. These should also be filed in the folder.

Accounts Owning

No. 8.—Make a list of these, similar to the list of customers' accounts. Be careful to include in it all invoices for material that has been included in the inventory. If there are invoices on hand for goods not received, do not include such invoices in this list, but enter them on the new books after they have been opened.

Go over each account carefully, making sure that there are no items included that you do not owe.

Notes Payable to Banks and Individuals

No. 9.—Make a separate list for the notes owing to your bank and those owing to any individuals. On these lists show the date of the note, to whom pay-

able, when due, the amount and the rate of interest. If this information is not in the office it can be secured at the bank. In any event be sure to include in these lists the amount of every note you owe. File these lists away in the folder.

Your folder now contains all the information necessary for making the opening entry. Now take a sheet of ruled paper with two columns for dollars and cents, known as Journal Paper. Turn to the monthly trial balance sheet in the large binder. Copy all the accounts under the heading assets, also the accounts material and productive labor. If you have any personal accounts owing to the business, as mentioned under heading No. 7, copy the names of such accounts. Next copy the names of all the accounts on the monthly trial balance under liabilities. If the firm owes any account to individuals for items other than regular monthly bills, copy the names of these in also. At the top of the two columns write the words assets and liabilities. The figures contained in your folder are now ready to be entered on this sheet.

In order to make our explanation simpler and clearer we show—over Fig. 1—the statement as it will look when finished. Opposite the name of each account we have inserted the heading number applying to it as given in this article.

If you have numbered each set of papers or sheet according to our headings, it will be of great assistance to you. Now, copy your figures in and foot each column. Be sure your addition is correct.

You will now find that the total of your asset or debit column exceeds that of your liability or credit column. This amount is to be entered in the liability column opposite the proprietor's net worth. If the firm is a partnership this will have to be divided up among the partners' investment accounts, according to the terms of the partnership agreement. After entering the net worth, the totals of the two columns should be entered. Both should be the same. Draw a double line under them.

You now have an exact copy of your opening entry. The next step is to enter it on your books. The entry is made in the purchase journal, using the two columns under the heading, "General Ledger." After the entry is made, write beneath it the following explanation: "To open up new set of books beginning Jan. 1, 1921" (or whatever the date is.) Above figures arrived at from previous books and other information available; for details see folder in files marked Closing Papers—Dec. 31, 1920."

Now turn to the general ledger and post each item to its respective account, being careful to enter it on the correct side—that is, debits on the debit side of the ledger account and credits on the

credit side. After doing this, go through your ledger and add up the debits and credits separately, being sure both totals agree.

Your general ledger is now started. The next step is to open up the customers' ledger. Take the list of customers' accounts from the folder and open up an account with each one. On the first line on the debit side enter as follows: "Jan. 1, 1921, Balance from Old Ledger, \$19.25." If the balance appears on your list on the credit side, make the entry on the credit side of your ledger. After doing this, add up all your balances, and be sure the total agrees with the amount shown in the opening entry on the purchase journal opposite customer's ledger controlling account.

Do the same with the accounts you owe, comparing the total of these with the amount shown opposite accounts payable—ledger controlling account.

If you have been using a loose leaf ledger for customers' accounts and accounts payable, it will not be necessary to open a new account for each customer. Merely rule off the account and bring down the new balance. Be sure that the new balance which you bring down is exactly the same as the amount shown on the list. Accounts which are in balance, or which are being charged off as uncollectible, should be ruled off and filed away, either in a separate binder or in the back of the current binder, so that when you finish every sheet will have an account on it.

How to Close a Double Entry Set of Books and Open Up New Book-keeping System

It is much simpler for the bookkeeper to change from double entry than from single entry. This is due to the fact that much of the required information must necessarily be kept by a double entry method, while such information is usually lacking in a single entry method.

Close your books in the same way you have always done. After this has been done, make a copy of our monthly trial balance form on a sheet of journal paper. Next take your "Final Balance Sheet—After Closing," and transfer the accounts on it to the sheet of journal paper according to the headings appearing on it. In doing this it may be necessary to sub-divide some of your old accounts, such as office equipment, shop equipment, etc. It is assumed, of course, that you have taken care of such things suggested before, in this article, under single entry, as pertain to both systems. Among these are proving the bank balance and taking inventory.

After the pencil copy of the new balance sheet is completed, make the opening entry in the purchase journal, as previously instructed.

The next step is to open up your customers and accounts payable ledger, as outlined for single entry.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

PERSONAL

Galt, Ont.—A. J. Ray, tinsmith, is a candidate for alderman in Ward 3 at Galt in the coming elections.

Toronto.—B. J. Miller, sanitary engineer, was a Board of Education candidate in Ward 5.

Winnipeg.—James Mackie, head of the plumbing firm of James Mackie & Co., Ltd., has been elected president of the Builders' Exchange.

Owen Sound, Ont.—A motion has been adopted to have estimates prepared for storm sewers or other outside work, to furnish work for citizens out of employment.

UNSANITARY CONDITIONS IN TORONTO SCHOOLS

Toronto.—Condemning the Board of Education for spending large sums of money for the education of children in seven schools outside the city limits and erecting new and modern buildings, while no effort has been made to clean up the filth, to install modern sanitary heating and ventilating systems in city schools, ratepayers and parents of children in the Queen Victoria school district met and passed two resolutions calling upon the board to look after the interests of the old ratepayers and residents of the city before going outside of the city's borders to spend its money.

EXPLAIN PT. COLBORNE WATERWORKS SCHEME

Port Colborne, Ont.—The council arranged for Engineer R. O. Wynne-Roberts to address a public meeting and explain the new waterworks and sewage disposal plans which he has developed during the past summer. In his address and explanations, Mr. Wynne-Roberts used numerous lantern slides.

WESTERN ONTARIO NEWS

Architect W. G. Murray, Dominion Savings Building, London, Ont., will receive tenders until January 22 for alterations in connection with new offices for Elliot Marr & Co., including new heating and plumbing.

W. Johnston, of Varna, Ont., is preparing plans for a new residence to be erected in the spring, and is interested in prices of plumbing and heating.

James W. Johnston, of Hensall, Ont., is preparing plans for a new dwelling to cost \$5,000 and is interested in prices of plumbing and heating.

Frank Black, of the Hayes, Ruppell Mfg. Co., Grand Rapids, manufacturers of tanks for toilets, was in Essex, Ont., recently negotiating with the council for premises in which to locate a Canadian branch factory.

Architect W. G. Murray, London, Ont., is preparing plans for the installation of lavatories in a high school and wants prices on equipment. Estimated cost is \$10,000.

GUELPH SEWAGE PLANT

Guelph.—Secord & Co., who had the contract for the construction work in connection with the new sewage disposal plant, have finished part of their work. City Engineer McArthur says that before the plant will be ready for use aerating tanks have to be installed and the old septic tanks cleaned out and new apparatus placed in them. Up to the present \$37,749 has been paid to the Secord Co. on this contract, and the city has purchased machinery and material, bringing the total expenditure so far to \$43,477.

WANT BETTER SANITARY EQUIPMENT IN WIARTON SCHOOLS

London, Ont.—Members of the Women's Institute at Wiarton are behind a move for the installation of better sanitary equipment in the school there and have made an offer of meeting a portion of the cost of installation. It was brought to their attention that a pail of water was kept in the rooms and when anybody wanted a drink it was passed around. There were no indoor conveniences. The women decided to take the matter up in the interest of the pupils' health and it is expected that as soon as the new council is elected some definite action remedying present conditions will be taken.

News of the Maritimes

ATTENTION TO PLUMBING INCREASES WATER PRESSURE

St. John, N. B.—Commissioner Jones of the Water and Sewerage department reports that the average water pressure in the city, as recorded by readings taken in the office of the city water department, shows a marked increase during this month as compared with the record for the same period last year. The commissioner believes the improvement to be mainly due to the efforts of the inspectors of the department, who have been paying special attention to house plumbing. During the summer months two members of the staff were sent out by the commissioner to inspect all plumbing fixtures. Their reports showed that many people were allowing much water to go to waste through defective plumbing, and they were warned to have necessary repairs made. A second inspection was made to see that instructions had been carried out, and the commissioner takes the increase in pressure as evidence of their success.

The following is a comparison of the average readings for the same periods in the two years:

December, 1919, lowest 16, highest 36.

December, 1920, lowest 37, highest 41.20.

AUTHORIZE NEW PLUMBING FACILITIES

St. John, N. B.—The Board of Commissioners of the General Public Hospital, at its semi-monthly meeting held on December 16, authorized the installation of new plumbing facilities in the Epidemic Hospital, and decided to provide some accommodation that might be available for Workmen's Compensation Board patients who wished to be treated by other physicians than those on the hospital staff. The payment of \$1,636.39 was authorized for the installing of three motors to run three dumb waiters. The factory inspector, John Kelly, wrote the board notifying it that its fireman was not a licensed engineer and requesting it to appoint a licensed man. This was done at no greater cost to the board.

In spite of the fact that there are not many big plumbing contracts under way in St. John, all the local plumbers seem to be busy with jobbing work.

Plumbing Oppor

The Trade Extension Bureau of the United States reports the following existing conditions:

17,500,000 homes without Plumbing out of about 22,500,000 homes altogether.

6,500,000 of these homes should be heated, yet 1,500,000 are unheated.

46,300 hardware stores and 48,300 drug stores lack proper plumbing.

32,000 of 38,069 cigar stores have not proper plumbing.

Only 15% of 36,000 confectionery stores are suitably equipped with plumbing.

Only 68% of 15,000 schools have proper plumbing, and but 20% of the hospitals.

Schools and Hospitals! The very places where plumbing conditions should be ideal.

Opportunities for 1921

While these statistics reveal conditions that exist in United States they are suitable for favorable comparison, as conditions in Canada are not better.

The opportunities for plumbing enamelware in Canada are equally great as in the United States. While the population of Canada represents about one-thirteenth of the population in U.S. (Canada approximately 8,000,000, U.S. 105,000,000), there are as many opportunities for plumbers in Canada as in the United States, as there are fewer plumbers in Canada in proportion.

From this we readily deduce that the main factor in Canada's plumbing prosperity from 1921 onward is means of bringing the trade, and through them the public, to a realization of the enormous need of plumbing enamelware in Canada.

The opportunities for the plumbing trade in Canada would be wonderful, if the needs of the Dominion were but 1 per cent. of those so recently found to exist in the United States.

Let us all co-operate to make the lack of plumbing facilities better known throughout Canada!

Tenders, Contracts Awarded; Construction, Etc.

WATERWORKS AND SEWERAGE EXTENSIONS

Cap de la Madeleine, Que.—A privately owned water system has been purchased by the city and will be extended and improved at a cost of \$150,000.

Ingersoll, Ont.—Town Council will have plans and estimates of sewage system prepared as soon as possible to be submitted to Provincial Board of Health.

St. Lambert, Que.—Town Council will deal with waterworks extension plan costing \$40,000. J. R. Beatty, sec'y-treasurer.

St. Catharines, Ont.—City plans construction of trunk sewer in Erie street and section.

Walkerton, Ont.—Work on construction of storm sewers costing \$25,000 for town will be proceeded with early in spring and tenders called.

Westmount, Que.—Sewers will be installed by town in Crescent and Cedar Aves. A. F. Bell, sec'y-treasurer.

WATERWORKS AND SEWERAGE CONTRACTS AWARDED

St. Lambert, Que.—Contract for 8-inch cast iron pipe for town placed with St. John Drydock & Shipbuilding Co., Drummondville, Que. E. Drinkwater, Engr., will receive prices on quantity of 6-inch double gate valves, 6 inch iron pipe, 12 inch, 9 inch and 6 inch vitrified tile pipe and a number of hydrants.

PLUMBING TENDERS WANTED

Montreal, West.—Northmount Land Co., 400 William St., will receive plumbing and heating tenders for two cottages costing \$900.

St. Lambert.—D. S. Bruce, 52 2nd Ave., will receive plumbing and heating contracts for two residences, costing \$16,000.

Ottawa.—D. Shefler & Sons, 348 St. Urbain St., Montreal, will receive plumbing and heating tenders for store costing \$6,000.

Montreal, Que.—B. Despaties, 3315 Christophe Colomb, the general contractor for residence costing \$10,000 for E. N. Normandeau, 308 Gatineau Ave., will receive tenders for plumbing and heating.

Toronto.—G. E. Lyon, 734 Keele St., the general contractor for residence and studio costing \$25,000 for Mrs. F. H. Johnston, 86 Keewatin Ave., will let contract for heating and plumbing.

Ottawa, Ont.—Tenders for plumbing and heating for addition to hospital for Grey Nuns, at a cost of \$300,000, will be called in January. Material required, plumbing \$15,000, heating \$15,000.

Moncton, N. B.—F. C. Jones is erecting stores and tenements costing \$12,000 and will receive tenders for plumbing.

CONSTRUCTION AND RENOVATION

Quebec, Que.—J. J. Seguin, 82 2nd Ave., Limoilou, will erect a store costing \$18,000 at corner of Des Fosses and St. Roch Sts., next spring.

Regina, Sask.—L. R. Steele Co., Toronto, Ont., purchased Wildun Lodge and will alter building at cost of \$25,000. Plans are being prepared. Wm. Haines, Western representative, Merchants Bank Bldg., Winnipeg.

Saskatoon, Sask.—Brown & Vallance, architects, Montreal, are preparing plans for college to cost \$170,000 for Presbyterian College, Saskatoon. Dr. E. H. Oliver, principal, 859 University drive.

Lachine, Que.—Foundations for school costing \$100,000 for R. C. School Commission, 52 15th Ave., will be put in this year and remainder of work will be proceeded with early in the spring. Cardinal & Beauchamp, architects, 26 St. James St., Montreal, U. Boileau, 312 James St., has general excavating and concrete contracts.

Cap de la Madeleine, Que.—Foundations for convent costing \$80,000 for Filles de Jesus were completed this year and balance of work will be proceeded with next spring. Jules Caron, architect, 21 St. Joseph St., Three Rivers.

St. Lambert, Que.—Town Council have granted \$100,000 to St. Lambert Housing Co. to build residences and are also receiving applications for private individuals for loans.

Toronto, Ont.—J. W. Siddall, architect, Confederation Life Bldg., is preparing plans of community club for Northcliffe Club. Building will contain a swimming pool, dining room and dance hall. Bowling greens and tennis court will be provided for.

Toronto.—Erection of additional units to the following schools is contemplated by the Board of Education: Dufferin, 6 rooms; Gledhill, 6 rooms; Hester How School, 4 rooms; Wilkinson, 4 rooms; Glenholme Ave. School, 4 rooms. W. W. Pearce, sec'y-treasurer.

Moncton, N. B.—A. A. Fownes, Union St., is building a residence at cost of \$6,500 on Weldon St., and will receive tenders until December 20th for electrical work, plumbing, heating, plastering and painting.

Winnipeg, Man.—Alex. Melville, architect, 500 Bank of Nova Scotia Building, has prepared plans of alterations and additions to warehouse to cost \$12,000 for Canadian Consolidated Rubber Co., Limited, 89 Princess St.

Ottawa, Ont.—Beach Foundry Co., Broad Street, will receive tenders until December 18 for sub trades except masonry and carpentry, required in erection of foundry costing \$75,000.

Fergus, Ont.—Work will be commenced next spring on erection of fac-

tory extensions costing \$200,000 for Beatty Bros., Fergus, Ont.

Point Grey, B. C.—Twizell, Birds & Twizell, architects, 719 Metropolitan Bldg., Vancouver, are preparing plans of eight room wing for what will eventually be a sixteen-room school. This wing it is estimated will cost \$100,000 and complete sixteen-room structure \$200,000. It is undecided whether tenders will be called or work done by day labor.

Toronto.—Tentative plans are being made for a school to cost \$30,000, of two or more rooms, on the Hamilton Highway near Long Branch Rifle Ranges. Mr. Pashak is trustee of School Section 7, Port Credit, Ont.

PLUMBING AND HEATING CON- TRACTS AWARDED

Toronto.—W. G. Edge, Ltd., have heating and plumbing contract of \$29,400 for Board of Education work.

Moncton, N. B.—T. Johnston Co., Ltd., have heating contract for theatre costing \$25,000 for L. M. Higgins.

Toronto, Ont.—Sheppard & Abbott have plumbing and heating contract for factory costing \$60,000 for the Decalcomania Co., of Canada.

Toronto.—A. Hughes, 350 Coxwell Ave., has plumbing and heating contract for store and apartment costing \$6,500, for W. Headley.

Toronto.—Wm. G. Mimms, 380 Concord Ave., has plumbing contract for garage costing \$50,000 for Geo. A. Morgan.

Toronto.—F. R. Maxwell & Co., 376 Queen street west, has plumbing contract for service station costing \$15,000 for Imperial Oil, Ltd.

Victoria, B. C.—Murray Bros., Vancouver, have plumbing, heating and ventilating contracts for erection of theatre costing \$300,000 for Famous Players Canadian Corp.

Winnipeg, Man.—Cotter Bros. have plumbing and heating contracts for addition to Grain Exchange, costing \$80,000.

Montreal.—J. J. Briard, 1277 St. Dominique St., has plumbing contract for residence costing \$35,000 for E. A. Barry.

Ottawa, Ont.—J. J. Phillips, 1005 Wellington St., has heating contract for residence costing \$10,000 and another costing \$11,500 for D. Arbuckle.

Outremont, Que.—Lalande & Dubleau, 1209 Van Horne Ave., have plumbing and heating contracts for two cottages costing \$20,000 for J. O. Laverne.

Toronto.—A. W. Wilson has plumbing and heating contracts for bungalow costing \$12,000 for Dr. Cook, 114 Glen Road.

Cap de la Madeleine, Que.—P. Ladroix and A. Gregoire, Pont St. Maurice, have plumbing contract for school costing \$8,000.

Cap de la Madeleine, Que.—Massicotte & Freres have plumbing contract for store and residence costing \$6,000 for F. Marchand.

Lachine, Que.—Bruno Pilon has plumb-

ing and heating contract for store and residence costing \$25,000 for J. Theoret.

Toronto, Ont.—F. O. Swan, 1962 Gerard street, has plumbing contract for bank, costing \$17,000, for Imperial Bank. Howard Furnace Co. has heating contract.

Toronto.—Robert Ross & Son, 1349 Queen street west, has plumbing contract for restaurant for Tony Chilco.

Victoria, B. C.—Hayward & Dodds have plumbing and heating contracts for alterations to Lee Block, costing \$15,000, for Canadian Fairbanks-Morse Co.

Walkerville, Ont.—Jos. L'Heureur has plumbing contract for bank costing \$25,000 for Imperial Bank.

Winnipeg, Man.—Argue & Wilson have plumbing and heating contracts for theatre costing \$30,000 for the Garrick Theatre.

Cap de la Madeleine, Que.—Plumbing contracts for four-tenement house costing \$10,000 for Simeon La Point, St. Henri St., are placed with A. Gregoire, Rue St. Madeleine.

Cap de la Madeleine, Que.—A. Gregoire, Rue St. Madeleine, Point St. Maurice, has plumbing contract for four-tenement house costing \$10,000 for Pierre La Point.

Cap de la Madeleine, Que.—Massicotte & Freres have plumbing contract for tenements costing \$10,000 for Wiley St. Cyr.

Toronto.—Heating and plumbing contracts for five residences costing \$6,500 each on Berwick Ave., on Weismiller & MacKenzie Bros., Ltd., 1425 Queen St. West, are awarded to A. Welch & Son, 304 Queen St. West.

Ottawa.—Plumbing contract for six residences costing \$24,000 for Barrett Bros., 260 St. Catherine St., is placed with Gervin & Hodgins, Bank and Sunnyside.

Ottawa, Ont.—Plumbing and heating contracts for residence costing \$5,000 for Housing Commission, 54 Rideau St., are awarded to William Bros., Glenora Ave., and Pease Foundry Co., Lyon St., respectively.

Ottawa, Ont.—Residence costing \$6,000 for A. Davidson, 60 Grosvenor St. Plumbing and plastering contracts are placed with Gervin & Hodgins, Bank and Sunnyside, and T. Patterson, Rosedale Ave., respectively.

Ottawa, Ont.—Plumbing contracts for residence costing \$6,000 for W. A. Crawley, 178 Bethany Rd., are placed with H. Tapp, Melrose Ave.

Banks Should Not Press Merchants Unduly

Should Give Time for Reasonable Absorption of Commodities—Canada in Good Position to Recupérate

PRESSURE by the banks on the business community to hasten liquidation will not be of an embarrassing nature, generally speaking, if the advice of President C. A. Bogert to the members of the Canadian Bankers' Association is followed. Mr. Bogert, in addressing his fellow bankers, discussed the decline in commodity prices, and urged that the banks do not bring undue pressure upon borrowers against commodities for liquidation, but asked them to give reasonable time for gradual absorption of the commodities by the public, thereby avoiding further depreciation and the accompanying disturbance.

On the other hand, the banks are very much interested in speedy marketing of crops, and Mr. Bogert said it was reassuring to know that the value of Canada's exportable food products alone this year would reach very large figures, and growers of products and grain dealers should be offered all possible facilities for the marketing of these products. The fact that Great Britain is now in the market for Canadian wheat was a matter for gratification, while Belgium,

France, Switzerland and Spain had already been buying. The effect of these sales was just becoming apparent, and, although no material reductions have yet been made in the ordinary commercial loans, gradual improvement should take place during the balance of the winter.

As to the prospects for easier money, Mr. Bogert did not look for much improvement in this direction until well into this year, perhaps the summer.

Canada, in Mr. Bogert's opinion, was probably in a better position to recuperate from the war than any other country, with its great resources and steadily increasing volume of products. Many commercial readjustments would have to be made, and those engaged in lines of business holding merchandise which is depreciating in value with falling prices, would have to draw on their profit and reserve. Merchants in some lines of business would have to take losses, but he believed the majority of them had accumulated sufficient surpluses during the profitable war period to provide for these contingencies.

NEW TORONTO MAKES NEW WATER CONTRACT

New Toronto.—Mayor Charles Lovejoy has made known the terms of the agreement between the town and the G.T.R. in regard to the water supply. The agreement is to last five years, and during this period the town will supply the railroad with water at the rate of 10 cents per gallon, instead of six cents, as heretofore. This will mean an additional yearly revenue to the town from water alone of \$7,326.76. It is estimated that a total revenue of \$68,750.70 will be derived by the town from the G. T. R. in the next five years.

MANUFACTURERS' LICENSE FOR MANUFACTURING TINSMITH

A firm of sheet metal workers in Sault Ste. Marie, Ont., writes as follows: "We conduct a general tinsmith and repair shop, installing furnaces (warm air), making cornices and erecting eave-troughing, renewing furnace

pipes and making many different kinds of articles such as could not be made in a factory, as only a small quantity is required of any one kind, also stove pipes, etc. Kindly inform us if such business is taxable and if so under what heading?"

(Answer.) You manufacture certain articles from the raw material, no matter though it is on a small scale, and as such you are classed as a manufacturer, and required to take out manufacturers' license costing \$5.00. A test case is now being made to test the validity of this regulation.

USE NATURAL GAS FOR HEATING

Bridgeburg, Ont.—Mayor Gordon was notified that a special permit will be granted by the Minister of Lands, Forests and Mines, Hon. H. Mills, in view of the intense coal shortage at Bridgeburg, allowing natural gas for heating purposes to be used for a period of six weeks.

Are You Interested in Combination Heating Systems?

An interesting and practical series of articles dealing with combination warm air and water heating systems has been written exclusively for Sanitary Engineer by N. A. Kearns. This has developed into an important phase of heating installation work and such instructive articles will therefore be timely. Watch for the first of the series to appear in January 15 issue of Sanitary Engineer.

How Plumbers Can Improve Collections

A Toronto Plumber Put in a Bookkeeper and in Six Months Paid Off Mortgage Held as Security by the Wholesale—Another Puts Drafts in Bank and Increases Collection Allowance as An Incentive

"DO NOT seek further credit accommodation from your bank, but seek the co-operation of the bank in collecting accounts receivable." Such is the advice to the plumbing trade from the credit manager of one Toronto wholesale firm, in view of the recent increase in the tendency to overlook collection of book accounts with the consequent tightening of available funds and the inability of the plumber to take his cash discounts or to meet his obligations when due.

In this connection the suggestion is made that plumbers take their books to their banker and check over the list of accounts and get the benefit of the banker's knowledge of the various accounts. A decision can then be arrived at as to the best means of collection. An opportunity should be had of stating the true facts of the case to the negligent customer and if he then fails to make even a partial adjustment the plan has been followed with good success of placing a draft in the bank covering the amount in arrears. Some plumbers have followed the plan of offering the banker $\frac{1}{2}$ per cent. on such collections in place of the usual $\frac{1}{4}$ per cent., as an added incentive to arrange settlement.

Speeds Up Action

In connection with this plan it is thought that the customer is more likely to take action on the matter when in the hands of the bank than on reminders from the plumber. Another point emphasized was that seeking the co-operation of the banker in this manner would tend to strengthen the bonds of interest between plumber and banker with the resultant increasing of good faith between them, an advantage to both concerned. Such action is advised firstly in connection with long standing accounts. The plan of offering a discount for cash is being followed by dealers in some communities, but it is not thought to be necessary or advisable except perhaps in some isolated cases.

The volume of plumbing business is said to be well maintained, and the only apparent difficulty seems to be in connection with the settlement of accounts, so that the tradesman will be enabled to carry sufficient size and range of stock to maintain business, and so that he may be enabled to take advantage of cash discounts.

More Pronounced in City

The condition outlined is confirmed by the credit manager of another wholesale firm, who advises that it is more pronounced in the city than in the

rural districts. This is taken to be significant in view of the fact that city plumbers have possibly more facilities for the collection of such accounts.

This official suggests that the trade will find it profitable to devote more attention to the accounting end of their business at the present time. He cites the case of one Toronto merchant whose trade included plumbing, tinsmithing and other such departments and required more attention than could be given by the proprietor. His wife was called upon to look after the store trade, the accounts were neglected and the wholesale firm found it necessary to hold two mortgages on the store property as security. This man was advised that he was doing too much and not paying sufficient attention to the business details.

Installs a Bookkeeper

About six months ago this advice was acted upon and a girl bookkeeper was in-

stalled at a nominal salary. Since that time this business has been put upon a much sounder basis than before. Not only have the merchants' accounts been met readily, allowing him to take advantage of cash discounts, but he has made sufficient to allow him to pay off one of the mortgages against his property. This case demonstrates the advantages of systematic handling of accounts.

Under present conditions when it is more difficult than usual to collect accounts, and when the plumber must keep his business in as liquid a condition as possible the suggestion is made that many of them could profitably install a bookkeeper at a moderate salary to make collections. Customers will soon come to appreciate the fact that they are dealing with a modern business institution and the result will be what the plumber needs to help him safely over the period of readjustment.

Long Period of Depression Is Unlikely

Intervals of Revival May Be Short Until General Lower Level of Merchandise Prices is Reached — Slackening in Wholesale Trade

(Statement made to Sanitary Engineer by P. Howland, President Imperial Bank of Canada.)

PELEG HOWLAND, president of the Imperial Bank of Canada, Toronto, points out that wholesale business was good in 1920, at least until the end of November, and that the year will very likely show satisfactory results to those engaged in it. Business during that period, it is stated, was done with safety and payments on the whole were good. Speaking of the outlook, Mr. Howland states as follows:

"Since the end of November there has been a perceptible slackening as compared with a year ago, and it is anticipated that the coming year will be one of decreased sales. Reports, however, from the country indicate that merchants are not overstocked, nor can I conceive that the wants of the consuming public have been fully supplied. Of course, the reduced returns for nearly all the natural products of the country, which are really the basis of our prosperity, must curtail the capacity to buy, but with the shortage of housing, the needs of railroads that have to be supplied, and the general activities which can only be stopped in part, I cannot see how we can remain in a depressed condition as regards trade for a long period; though our intervals of revival will be, I think, short, until

cheaper labor and greater production per unit bring about a general lower level of prices of merchandise. When a level has been reached that begets confidence, then and only then, will there be an outlet for the full energy and enterprise of the people, and the return of what we call prosperity.

"It is to be hoped that in the period approaching, our Governments, not only the Dominion, but the municipal and provincial, will exercise the strictest economy. I can conceive of nothing that would give so much heart as the beginning of a steady reduction of our huge war debt.

"Can we hope, too, for simpler methods of taxation and the avoidance of those that promote dishonesty, hamper trade, and impose heavy burdens of expense in their operation?

"Also is it too much to expect that Government regulation of business will be avoided and that trade will be allowed to seek its natural channels, unhampered, under which condition it flourishes best. Prosperity comes with the distribution and exchange, in the cheapest possible way, of the products of the different classes of labor."

NEW CANADIAN PATENTS

(Issued for Plumbing and Heating Goods)

No. 206,388. RADIATOR.

Hugo Helbig, Racine, Wisconsin, U.S.A.

A radiator structure composed of a series of plates arranged in pairs, and provided with zig-zag channels in their side faces, which are parallel to each other in the corresponding plates of adjacent pairs, and oppositely inclined in intermediate plates, with the angles formed by the zigzag channels of the opposing plates of each pair overlapping, and the successive pairs of plates being arranged in spaced relation between their margins to provide a water passage.

A radiator structure composed of a series of plates arranged in pairs, and provided with zigzag channels in their side faces, which are parallel to each other in the correspond-

ing plates of adjacent pairs, but offset therefrom to provide air passages between the plates of one set intermediate of the passage in the next set, said channels being oppositely inclined in the plates of each pair with the angles overlapping.

A radiator structure composed of a series of plates arranged in pairs, and provided with zigzag channels in their side faces, which are parallel to each other in the corresponding plates of adjacent pairs, and oppositely inclined in intermediate plates, with the angles formed by the zigzag channels of the opposing plates, of each pair overlapping, and the successive pairs of plates being arranged in spaced relation plates being formed of sheet metal, each pressed to form said zig zag channels in one side face and corresponding ridges in the opposing face of the plate, said ridges being adapted to serve as deflectors in the water channel.

No. 206,259. WASTE PIPE CLEANER.

Louis Klarmann, North Bergen, New Jersey, U.S.A.

A tool of the class described comprising a threaded rod, a cone-shaped corkscrew-like member fixed to one end thereof, a collar mounted on said rod, at the rear end of said member, links pivotally connected with said collar, a nut having threaded engagement with said rod and provided in its periphery with an annular seat, a collar mounted in said seat and

loosely engaging said nut, links pivotally connected at one end with said collar and at their other end with said first-mentioned links intermediately of their end, and means connected to rotate said nut for opening and closing said links.

A tool of the class described comprising a threaded rod, a cone-shaped corkscrew-like member fixed to one end thereof, a collar mounted on said rod at the rear end of said member,

links pivotally connected with said collar, a nut having threaded engagement with said rod and provided in its periphery with an annular seat, a collar mounted in said seat and loosely engaging said nut, links pivotally connected at one end with said collar and at their other end with said first-mentioned links intermediately of their ends, an inverted U-shaped member having the free ends of its arms fixed to said nut, an actuating rod connected with said U-shaped member, and a tubular casing surrounding said nut actuating means and carried by said rod.

A tool of the class described comprising a threaded rod, a cone-shaped corkscrew-like member fixed to one end thereof, a collar mounted on said rod at the rear of said member, links pivotally connected with said collar, a nut having threaded engagement with said rod and provided in its periphery with an annular seat, a collar mounted in said seat and loosely engaging said nut, links pivotally connected at one end with said collar and at their other end with said first-mentioned links intermediately of their ends, an inverted U-shaped member having the free ends of its arms fixed to said nut, an actuating rod connected with said U-shaped member, a flexible tubular member enclosing said nut actuating means, and a U-shaped member extending transversely through said rod connected to support said tubular member.

No. 206,341. FLUSHING DEVICE FOR WATER CLOSET

The Crane Company, Chicago, Illinois.

The combination of a closet bowl having a shelf provided interiorly with a walled flushing passage and formed therethrough with a vertical straight-way opening intersecting said passage, a flushing valve casing having its outlet portion constructed and arranged in said opening for direct communication with said passage valvular means for said outlet portion movable in said casing in the opening and closing the

ends of said opening, and valve actuating means mounted on said shelf whereby to actuate said extension.

The combination with a closet bowl provided with a rearwardly projecting horizontal shelf having centrally within it a walled flushing passage, the upper and lower walls of said shelf formed therethrough with co-axial openings above and below said passage, of a flushing mechanism therefor comprising a valve casing embodying a basal inlet portion below said shelf and an upper portion having a closed top and a side outlet providing direct communication with said flushing passage, said upper portion insertible upwardly to extend through said openings, securing closure means on said casing designed to adjustably engage said upper and lower walls about said openings, valvular means for said outlet and inlet portions extending upwardly beyond said closed top, and valve actuating means mounted on said shelf independently of said casing and said flushing passage.

The combination of a closet bowl having a shelf provided interiorly with a horizontally disposed wall flushing passage and formed therethrough with a vertical straight-way opening terminally intersecting said passage and its walls, a flushing valve casing having inlet and outlet portions, the latter being constructed and arranged for direct later communication with said passage, valvular means for controlling said portions, and including a stem extending upwardly beyond said shelf, securing means on said casing for securing the casing in the opening and closing the ends of said opening, closure means for said casing comprising end members arranged to position said valvular means, and a stem actuating member carried by said shelf rearwardly of said casing.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

THERE is a downward trend in the price of many plumbing lines, and it is expected that there will be a gradual lowering of the prices of some goods which have been holding firmly.

A comparison of prices of plumbing and steamfitting supplies with quotations in effect a year ago show an average advance over last year's prices of nearly ten per cent. The lines that show the greatest reduction are lead products and ingot metals.

Among the declines since the last market report are bar iron and steel, black and galvanized sheets, ingot metals, and waste materials. Some makes of valves are lower, and

some unions have been reduced in price. Lower prices on brass goods are expected, and new lower quotations on range boilers are probable in a few days.

Price lists on radiators and hot water boilers are withdrawn, and new lists may show some advances, it is stated.

At the present time there are many wholesalers and manufacturers taking inventories, and with travellers off the road business is quieter. There is a general feeling, however, that there will be a revival of demand early in the new year and that an increase of building operations is probable throughout the Dominion during the coming year and will mean bigger and better business.

MONTREAL

MONTREAL, Dec. 30.—The changes in prices of plumbing supplies are in a downward direction, and enamelled wares which recently were advanced have declined in price again. Lower prices are quoted on sheets and plates, bar iron and steel, solders, ingot metals and waste materials. Pipe fittings, too, have been revised with some lower prices.

The price lists of radiators and boilers have been withdrawn, and it is thought that higher quotations may be made on these goods.

Pipe prices are maintained, and there is a certain shortage in some sizes still, though the demand is less at the present time. There is a slow movement of compression goods, conductor pipe, range boilers and closets, and prices are holding unchanged.

Business on the whole is quieter, but this is expected at this period of the year.

Expanded Metal Lath Moving Freely

Montreal.

METAL LATH.—Expanded metal lath is greatly in demand and is moving quite freely. Many large new buildings that were late in being closed in are taking quantities of this material now, and prices are as follows:

PAINTED	
26 ga., per sq. yd.	0 42
24 ga., per sq. yd.	0 48
23 ga., per sq. yd.	0 57
Galvanized is 11c per sq. yd. extra.	
Trade discount 10%.	

Corrugated Iron Quiet; Prices Unchanged

Montreal.

CORRUGATED IRON.—There have been no changes in prices on corrugated iron, and the sales, owing to the season,

are slow. Raw materials are down considerably and it is expected that before long prices of corrugated iron will be revised considerably.

Corrugated Sheets—	Per 100 Sq. Ft.
No. 28 gauge	11 25
No. 26 gauge	12 00
No. 24 gauge	18 75
No. 22 gauge	22 25
No. 20 gauge	26 50
No. 18 gauge	32 75
Less 7½%.	

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

Few Sales Noted in Conductor Pipe

Mon'treal.

CONDUCTOR PIPE.—Owing to the season of the year conductor pipe is moving very slowly. There has been no change in prices, but a revision can be looked for in the near future, as there

is a tendency for prices to go to a lower level.

PIPE (Conductor) Plain

2 in., in 10-ft. lengths, list.	8 00
3 in., in 10-ft. lengths, list.	9 70
4 in., in 10-ft. lengths, list.	12 80
5 in., in 10-ft. lengths, list.	17 50
6 in., in 10-ft. lengths, list.	21 30
Add 25% to the above list.	

Steady Demand For Soil Pipe

Montreal.

SOIL PIPE.—There is a steady demand for soil pipe, and sales are very fair. Prices continue to hold firm and quotations are as follows:

SOIL PIPE (medium and extra heavy)—
2, 3, 5, and 6-inch, 5% discount.
4-inch, 10% discount.
8 inch, add 20% to list.

FITTINGS—
2 to 6 inch fittings, 20% discount.
8-inch, plus 20%.

Oakum Sales Are Reported Fair

Montreal.

OAKUM.—The demand for oakum continues to be fair at this season of the year. Price is unchanged and it is quoted at \$4.75 per 50 lb. bale.

Prices of Fittings. Are Revised

Montreal.

FITTINGS.—There is only a fair call for fittings at this time, but the demand is entirely seasonable. There have been some changes in prices, which are downward. Quotations are as follows:

PIPE FITTINGS

Lower Prices Expected on Cotton Waste

Montreal.
COTTON WASTE.—Cotton waste is moving slowly now, but it is to be expected at this particular time of the year. Prices are unchanged, but with the mills placing new contracts in the near future, in view of the lower costs of raw materials, waste is expected to sell at lower prices. Present quotations are as follows:

No Change in Price on Range Boilers

Montreal.
RANGE BOILERS.—Prices remain firm on range boilers. Business is quiet, and it is expected it will continue so for another three or four weeks' time.

RANGE BOILERS—	
Standard	Ex. Heavy
30-gallon	\$15 00 \$18 00

Closet Sales Are Dull at Present

Montreal.
CLOSETS.—There has been no improvement in sales of closets, and at the present time manufacturers and dealers are stock taking. It is expected that there will be a revision in prices of Vitro closets in a few days' time to a lower level. Present quotations are as follows:

Closet, standard outfit	\$34 00
Do., with post hinge seat	35 00
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	37 00

Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25

Prices on Radiators Continue Firm

Montreal.
RADIATORS AND BOILERS.—It is rather significant that manufacturers of radiators and boilers have during this week sent out a circular to the trade withdrawing prices on January 1st, 1921. This might be taken at this time to indicate that there will be revisions in prices downward, in common with other lines. We do not believe, however, that this will be the case, but rather that the dealer who holds off expecting to secure lower prices will not only experience difficulty in securing supplies but will pay prices prevailing at this time. The costs of production are known to have advanced to very high peaks with little prospects for being lowered in the near future. In arriving at selling prices it has been noted that manufacturers have not advanced these on a corresponding percentage to the rising costs, and though production costs have increased since selling prices were changed last these were unchanged owing to the popular prejudice against further advances and the expectation that prices would abate. We are informed that though the workmen are now receiving big wages they will be demanding a further large increase after the first of the year. Just what action will be taken is impossible to say at this time, but the indications are that prices will not be lowered for quite a while. In the meantime the following list prices are being quoted.

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in.,

New Prices on Enamelled Ware

Montreal.
ENAMELLED WARE.—Prices have again been changed on enamelled ware, and it is to be noted that the revisions are downward and quite a reversal of form to the last changes. Business continues quiet, with stock reported as being in good shape.

Sinks, roll rim, 18x30 in.	19 55

Iron and Steel Prices Are Lower

Montreal.
IRON AND STEEL.—The situation of the iron and steel mills in the U. S. A. is now reflected in the revised prices that are being quoted locally. During the last few years the independent mills were oversold and some buyers paid big premiums to get priority shipments. These mills are now seeking business and are making prices to stimulate business. It is not expected, however, that there will be any big or continued changes in prices downward, though there may be slight concessions later.

Single reeled machinery steel	6 80
Spring steel	6 00

Scrap Metal Market

Dull at Present.

Montreal.

OLD SCRAP.—There have been further declines in prices on some lines of old scrap, with little business offering at this time. Toronto prices are regarded as too high yet and will decline further. It is expected, however, that there will be a good movement in these lines during the first quarter of 1921, and that there may be a firmer tone to prices.

Dealer's Buying Prices

Automobile tires	0 75	1 25

Ingot Metals Are

Reported Quiet

Montreal.

INGOT METALS.—Prices if anything are rather lower, and as matters are it is impossible to say what levels they are going to. The question of costs does not enter into the matter at all. While

they are certainly cheap the fact has no bearing on the situation at present.

TIN.—Owing to the holiday season in London this metal is very quiet, and there is not likely to be any change until after the first of the new year. The price shows a little weakness and is quoted locally at 42c pound.

COPPER has touched a new low level, and it would appear that prices will be still lower. Local prices are "Electro," 19c, and "Casting," 18¾c pound.

LEAD.—There has been no change in the price of lead and it is quoted at 7¼c pound.

SPELTER is easier in price and is being quoted locally at 7¾c pound.

ANTIMONY.—There is nothing new to report on this metal and the price locally is 8¼c, which is unchanged.

ALUMINUM is very quiet and the price remains the same as previously quoted at 35c pound.

TORONTO

TORONTO, Dec. 30.—The chief feature of the markets is a slight reduction in the price of closets. Anamelled ware is standing at the reduction announced in the last issue of Sanitary Engineer.

There is a downward tendency in many lines of plumbing supplies, and some makes of valves are reduced. Some unions are lower in price. Bar iron and steel continue to show easier quotations and sheets have been reduced in price. Pipe, however, shows no change, and there is still a shortage in the smaller galvanized sizes. Ingot metals continue to have a downward turn but trading is quiet. Scrap metal markets are very dull and weak and prices are nominal at present.

Business on the whole is quieter, but scarcely more so than is usual, and many manufacturers and wholesalers are stocktaking at the present time, and travellers are off the road.

Pipe Movement Less,

But Prices Hold

Toronto.

WROUGHT PIPE.—The demand for pipe is smaller now, but a fair sorting up is still reported. Stocks have been low and are gradually getting into better shape, but some of the smaller sizes are somewhat scarce yet. Prices are holding firm without change, and across the line pipe is the one steel product that a two price standard still prevails on, as the independents' prices are down to the Steel Corporation levels on practically all lines except pipe, although some price cutting has been reported recently there.

With a continued recession in raw materials the tendency on pipe should be downwards from now on.

List No. 46 is still in effect and is as follows:

LIST NO. 46
Standard Butt Weld Pipe
Per 100 Ft.

Pipe Fittings Quiet;

Dart Unions Reduced

Toronto.

PIPE FITTINGS.—There have been no further changes in the quotations on pipe fittings, except that dart unions have been revised in price and are now easier. From ¼-inch to 2-inch are now

20 per cent. off list, and 1/8-inch and 2 1/2-inch to 4-inch are less 8 per cent. Galvanized are 30 per cent. above black prices.

Supplies of fittings have improved and there is little talk of shortages now. Sales are smaller now and are mostly sorting up orders.

Present quotations are as follows:

PIPE FITTINGS

Cast iron fittings	Net
Plugs	15%
Bushings	17 1/2%
Unions 1/4" to 2"	30%

Compression Goods Lower; Some Valves Reduced

Toronto.

COMPRESSION GOODS.—There is no change in bath cocks or stop and waste cocks. Some lines of valves are reduced in price and new quotations made. The demand for compression work is lighter at present. Wholesalers stocks are in fair shape, and though prices generally are holding on these lines many look for a gradual lowering on brass goods in the near future. Announcement is made of a reduction in prices of all brass goods used in the plumbing trade by the Association of Brass Manufacturers in the U.S.A., and although Canadian prices do not always follow the trend of those in the States, it is an indication of the way the market is tending. Present quotations are as under:

Compression work, standard	25%
Fuller work, standard	30%
Bath cocks, compression	25%
Do., Fuller	28-30%
Flatway stop and waste cocks, standard	25%
Roundaway stop and waste cocks, standard	16%

Quick opening	28%

Bar Iron and Steel Show Easier Prices

Toronto.

BAR IRON AND STEEL.—Business is quiet in iron and steel, and wholesalers are generally stocktaking. Many of the mills are reported to be closed down and orders being few it is expected that a large percentage of them will not resume until the middle of the month.

Prices are holding at the recent decline and little change is expected at the present.

Quotations are the following:

IRON AND STEEL

Common bar steel, 3-16 in. and lighter	\$ 5 50
Common bar iron, 3-16 in. and lighter	5 50
Common bar iron, 1/4 in. and heavier	4 75
Angle base	6 00
Horseshoe iron	6 00
Tire steel	5 95
Band steel	5 50
Spring steel	12 75
Mining drill steel	28 00
Common cast tool steel	20 00
Sleigh shoe steel	6 00
Norway iron	15 00
Toe caulk iron	6 70
Hoop steel	7 50

Slow Movement of Sheets; Prices Decline

Toronto.

SHEETS AND PLATES.—Little that is new is noted since the last report on sheets or plates. Business is lighter, but this is not unexpected at this period of the year. Inventories are being taken by many at present and stocks are reported to be light.

There is a range between high and

low quotations, and it is possible to get better figures for quantities.

While the sheet mills report a reduction in operations there are some mills that are still at full or nearly full capacity. The latter are those operated by the Steel Corporation and many of the independents have closed down recently until early in January, and it is stated that many of these are short of orders and may remain shut down for a longer period.

The tin plate market continues weak with little buying.

Present quotations are as follows:

BLACK SHEETS

14 gauge	8 35	9 30
16 gauge	8 40	9 40
18-20 gauge	8 45	9 45
22-24 gauge	8 50	9 50
26 gauge	8 55	9 55
28 gauge	8 65	9 65
3-16 in. plate	6 50	7 00
1/4 in. boiler plate	5 50	6 00

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

GALVANIZED SHEETS

	Premier	Apollo
10 3/4 oz.	9 90 11 30	10 00 11 35
U.S. 28	9 50 10 80	9 60 11 05

16	8 90 10 30	9 00 10 45
12 and 14	8 75 10 15	8 85 10 30

An extra is now charged on galvanized sheets, 10 3/4 oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Corrugated Sheets Quiet; Prices Holding

Toronto.

CORRUGATED SHEETS.—The demand for corrugated sheets is seasonably quieter now, and little business is expected for the present. Prices are holding unchanged, but an easing of prices may be possible later it is thought.

General quotations are as follows:

Corrugated Sheets—	Per 100 Sq. Ft.
No. 28 gauge	12 00
No. 26 gauge	12 75
No. 24 gauge	12 75
No. 22 gauge	22 25
No. 20 gauge	26 50
No. 18 gauge	32 75

Less 7 1/2%.
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

Fair Sales Lead Products; Prices Steadier

Toronto.

LEAD PRODUCTS.—Sales of lead products though smaller are reported to be seasonably fair. Prices have been reduced with the declines in primary markets and this may have helped sales. Lead is stated to have been a little more active in outside markets, but is still unsettled. Some look for lower prices yet on lead, but on the other hand the bottom is thought to have been reached by others.

It is claimed by some of the leading lead producers that at present prices lead would be selling at a loss if it were not for the fact that most lead ores contain a certain amount of silver on which there is a fixed price in the States.

No further changes are recorded and prices are the following.

Lead pipe, list, per lb.	0 14½
Lead waste pipe, list, per lb.	0 15½
Do., over 8 in., list, per lb.	0 16½
Lead pipe is subject to discount of 10%.

10-in. 7 70	18-in. 16 00
12-in. 9 16	
Add 25% to the above list.	

Conductor Elbows Holding Unchanged

Toronto.
CONDUCTOR ELBOWS.—With conductor pipe there is a smaller demand for conductor elbows just now and sales are light.

Prices are unchanged and 50 per cent. is quoted above list.

ROUND CORRUGATED OR CRIMPED ELBOWS	
2 inch, list	\$1 90
3 inch, list	2 20
4 inch, list	3 60
5 inch, list	9 00
6 inch, list	10 50
Add 50% to above list.	

Soil Pipe Quiet; Revision Expected

Toronto.
SOIL PIPE AND FITTINGS.—Sales are lighter on these now, and little business is expected during the next month or so. No changes are made in prices, but revisions are expected.

Following are present quotations.

SOIL PIPE (medium and extra heavy)—
2, 3, 5, and 6-inch, add 10% to list.
4-inch, net list.
8-inch, add 20% to list.

FITTINGS
2 to 6 inch fittings, 20% discount.

Boiler Prices Will Be Lower

Toronto.
RANGE BOILERS.—A seasonable demand is reported on range boilers, but sales are not large at present.

Prices on range boilers are being revised, but new quotations are not issued yet. An easier price is quoted on the 30 gallon standard electric welded boiler which is being quoted at \$13.50, or a reduction of \$1.50 from previous quotations.

Prices are the following at present:

RANGE BOILERS—	Standard	Ex. Heavy
30-gallon	\$15 00	\$18 00
35-gallon	18 00	21 00
40-gallon	20 00	23 00
52-gallon	25 00	29 00
66-gallon	35 00	40 00
82-gallon	42 00	48 00
100-gallon	55 00	65 00
120-gallon	70 00	80 00

Boiler Tubes Unchanged and Quiet

Toronto.
BOILER TUBES.—No changes have been made in quotations on boiler tubes. Sales are light at the present and stocks are said to be sufficient for all normal demands. Following are quotations:

BOILER TUBES—	Per 100 feet	
	Seamless	Lapweld
1 inch	\$28 00	\$.....
1¼ inch	32 00
1½ inch	33 00
1¾ inch	35 00
2 inch	35 00	30 00
2¼ inch	38 00	32 00
2½ inch	46 00	36 00
3 inch	54 00	45 75
3½ inch	70 00	49 00
4 inch	96 00	63 00

Stove Pipe Prices Are Unchanged

Toronto.
STOVE PIPES AND ELBOWS.—Some deliveries of Canada plate improved the stove pipe situation to some extent, but the demand having fallen off the shortage is not felt as much as it was.

Prices are holding and are as follows:
Stove Pipes—Made up, 6 in., common, \$23.57 per 100 lengths; bright, \$29.45; 7 in., \$26.09; Bright, \$31.22 per 100 lengths.

Stove Pipe Elbows—6 in., Light, \$3.15 doz.; heavy, \$3.65; 7 in., light, \$3.50; heavy, \$4.09.

Mild Weather Affects Heater Sales

Toronto.
STOVES AND RANGES.—The shortage in stoves is reported to be less pronounced now, and the continued mild weather down almost to the end of the year has been responsible for a falling off in the demand. This, and the fact

that merchants are not stocking up to the same extent as in previous years, and are buying from hand to mouth has enabled manufacturers to accumulate a little stock in foundry and warehouse. There are some reports of cancellations in heating stoves, but other manufacturers state that they do not amount to much.

Prices are holding strongly and little expectation is given of any change during the present season.

No Changes in Radiator Prices

Toronto.
RADIATORS.—Sales of radiators are reported to be lighter, but there is said to be a seasonable amount of business doing.

Prices are unchanged and lists and discounts are the following.

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.

38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 34% for hot water and 35% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 34%.

Oakum, Small Demand and no Changes

Toronto.
OAKUM.—There is a small demand for this product now, but sales are lighter and prices are holding unchanged.

Quotations per 100 lbs. are as follows: special No. 1, \$20.40; U. S. Navy, \$21.60; plumbers spun, \$9.50. Small quantities extra.

Stillson Wrenches; Discount Now 40% Off

Toronto.
STILLSON WRENCHES.—The present discount on Stillson wrenches is 40 per cent. off list which is as follows:

	Each, List
6 inch	\$2 00
8 inch	2 25
10 inch	2 50
14 inch	3 50
18 inch	5 00
24 inch	7 25
36 inch	13 50
Less 40%.	

Linseed Oil, Turpentine and White Lead Holding

Toronto.
TURPENTINE, LEAD & OIL.—Prices are steadier on white lead in oil, turpentine and linseed oil and present quotations are the following: White lead, pure, per 100 lbs. in less than ton lots, \$18.55. Turpentine \$1.70 per gallon in less than barrel lots. Raw linseed oil \$1.30 per gallon in smaller quantities than barrels. By the barrel quotations are 15 cents less.

Scrap Metal Market Dull and Weak

Toronto.
WASTE MATERIALS.—The scrap metal market continues to be weak and dull. Dealers have not been pressing for sales and buying has been small.

MUELLER DOUGLAS FLUSH VALVE FOR LOW DOWN WORK

The body is of high quality red brass—uniform in thickness, with clean core work. The seat is reinforced by a bead, to prevent distortion and to insure a perfect cut-off.

Double guide for bottom wire always seats the float properly. Accurate tapping and machining insure perfect action of the *MUELLER* Douglas Flush Valve, No. A1-1275. The float is of highest quality rubber.

Prices upon request. Mail orders given prompt attention.

H. MUELLER MFG. CO., Ltd.
SARNIA, ONT.

Water, Plumbing and Gas Brass Goods
and Tools.

American Factory at Decatur, Illinois, U. S. A.
Branches, New York and San Francisco

Mueller Metals Co., Pt. Huron, Mich., Makers of "Red Tip"
Brass Rod; Brass and Copper Tubing; Forgings and Castings
in Brass, Bronze and Aluminum; Die Castings in White
Cast Iron and Aluminum; also Screw Machined Products

Quotations are very largely nominal. Wrought iron scrap and stove plate are holding fairly firm, but red and yellow scrap are weaker. Heavy lead scrap has moved downward. There is little business reported and quotations are the following:

Ingot Metals Dull With More Declines

Toronto.

INGOT METALS.—The markets are still very dull in all ingot metals and though activity is usually not expected at this time of the year the continued decline in all primary markets together with a disinclination on the part of the buyers to carry any more stock than suffices for their immediate needs is responsible for the extreme dullness in all markets and little business.

It is pointed out that at the present rates of exchange Canadian markets are at a low level and compare favorably with American prices.

TIN.—Buying has been negligible in this metal lately. The slump continues in outside markets and London values touched low levels for the year despite the efforts of the Malay Straits Government to hold up the market by accepting all Straits tin at an equivalent of £235, c.i.f. London, which is higher than the market price in London.

Quotations locally are at 44 to 46 cents per pound.

COPPER.—This metal remains dull and there is a downward trend reported everywhere. There has been a drastic curtailment in production during the past few months, but the output for the year is expected to exceed that of last year.

Quotations remain unchanged here at 19 cents for casting copper.

LEAD.—This metal is marked by declines in all markets. While a trifle more enquiry is reported it is still dull.

Prices are lowered again and \$7.00 is now quoted.

SPELTER.—Lower quotations mark spelter this week and it is down 25 cents to \$7.75.

ANTIMONY.—Dull without any change is the report on antimony and quotations remain from 8 to 9 cents.

ALUMINUM.—This metal continues dull and unchanged in local markets, but

prices are lower on U. S. markets and are the lowest they have been there for five years. Quantities of both sheets and manufactured aluminum goods are

being imported into American markets, principally from Germany it is stated.

Prices here are unchanged at 37 to 39 cents.

WINNIPEG

WINNIPEG, Dec. 30.—Prices of plumbing and steam-fitting supplies are remaining very steady here, and little change is expected for a few weeks.

There is a likelihood, however, that cast iron fittings may be lower in price very shortly. Malleables seem firm at present. Pipe stocks are getting better all the time, and with demand as small as it is at present they should be in good shape before long. Pipe prices still remain the same.

Business is very quiet in all plumbing lines at the present time, but better conditions are looked forward to in the course of a few weeks.

Enamelled Ware

Now Quiet

ENAMELLED WARE.—There is still a small demand for baths and lavatories.

As announced in last issue of Sanitary Engineer prices were advanced to the wholesaler, but they are expected to decline again.

Pipe Is Unchanged;

Tendency Lower

PIPE.—There has been no change made in pipe quotations although the feeling is that the tendency is for lower prices.

Stocks are improving in wrought iron pipe, and before long if the demand is no greater than it is at the present they will be in as good a shape as at any time.

Quotations are the following:

Date Effective Sept. 29, 1920.

Cast Fittings

May Be Lower

PIPE FITTINGS.—Business is quieter in these lines and no changes have been made up to the present in prices, although there is a likelihood of cast iron fittings being reduced in price before long.

No change seems forthcoming in malleable fittings.

Sheet Demand Small;

Revisions Likely

SHEETS AND PLATES.—Sales of sheets and plates are smaller now and merchants are only buying in small quantities.

Prices are expected to be lower and with little business offering quotations are apt to be nominal.

Black Sheets—10 gauge, \$10; 12 gauge, \$10; 14 gauge, \$10; 16 gauge, \$10.35; 18 gauge, \$10.40; 20 gauge, \$10.40; 22 gauge, \$10.45; 24 gauge, \$10.45; 26 gauge, \$10.50; 28 gauge, \$10.65.
Galvanized Sheets—16 gauge, \$12.35; 18 gauge, \$12.50; 20 gauge, \$12.50; 22 gauge, \$12.65; 24 gauge, \$12.65; 26 gauge, \$12.80; 28 gauge, \$13.40; 10½ oz., \$13.80.

Range Boilers

Now Quieter

RANGE BOILERS.—There are fair sales of range boilers just now though the demand is quieter.

Prices are unchanged but a lower tendency is probable.

Following are quotations here.

30 gallons	15 00
35 gallons	17 50
40 gallons	20 40
52 gallons	27 20
66 gallons	35 00
82 gallons	48 00
100 gallons	62 00
120 gallons	77 00

SANITARY APPEALS SELL WATER SYSTEMS

(Continued from Page 17)

ness. A canvass of every farmer in the district by mail and by personal call should be productive of many good prospects. Some definite plan outlining the advantages of water systems, and if possible a model showing such a system in use as compared with conditions before its installation, will help to sell the prospect on the idea.

Morrison Valves

Your customers know the excellent reputation of Morrison Products and buy them readily.

Morrison Valves are specified on nearly all drawings for important contracts.

In every feature of design Morrison Valves are abreast of modern engineering progress.

These reliable fittings are made from perfect patterns, cast with the greatest skill, insuring evenly distributed material in the walls.

James Morrison Brass Mfg. Company

Sell *Westco* Tankless Water Systems

Running Water Badly Needed in Rural Districts—The Westco Fills the Need

Every farmer or rural resident having electricity on his farm or premises is a splendid prospect for the Westco Tankless Water System. Running water is one of the most urgent needs in the country to-day.

Farmers everywhere are demanding a good water system—and the Westco fills the need perfectly. There is big money in it for you. The field of operation is enormous. There is the whole of the vast rural areas, and suburban and outlying parts of cities and towns. It is a proposition replete with possibilities.

The Westco requires no storage tank—water is pumped direct from source of supply to taps. Entirely automatic; open tap, pump starts; close tap, pump stops.

Simple to understand, and is self-lubricating. Inexpensive to buy, maintain and operate.

No gears, no valve, no belt—only one moving part in the entire system—the impeller.

Above all—thoroughly reliable.

Westco Pumps, Limited
707 Yonge St., Toronto, Ont.

Agents Make Good Profits

Our agents are making splendid commissions. The farmer is deeply interested to begin with, and the talking points of the Westco are without number. You, too, can make good money selling this water system.

TWO GREAT GUILDS

ONE hundred years before Columbus landed in America, there was established in England a guild of gold and silver smiths who, through pride of craft, established a mark whereby when a housewife bought silverware and saw on it the word "Sterling" she made her purchase with absolute assurance of value received.

Five centuries have passed since that mark was established. To-day it still remains an unerring guide throughout the English-speaking world, and woe betide the man or firm who misuses this mark "Sterling." The police of the world stand back of it.

Only six short years ago there was established on the North American Continent another guild of craftsmen—another body of men with pride of achievement—the guild of Advertisers, Advertising Agents and Publishers.

They, too, adopted a hall mark to designate an honest product in the business in which they were engaged.

Sentiment, genius or instinct guided the adoption of the three great foundational letters A.B.C. as their insignia. In one respect alone did these two great guilds of craftsmen—separated in birth by over five centuries—differ. One determined the fineness alone, and left the purchaser to measure the weight. The other determined the weight but gave such specific information as would enable the buyer to determine for himself the degree to which that fineness applied to his own particular business.

A.B.C. stands for Audit Bureau of Circulations, and Audit Bureau of Circulations stands for absolute honesty in the preparation and presentation of circulation statements. The advertiser who buys space in a publication whose circulation is audited by the A.B.C. knows exactly what he is getting.

Sanitary Engineer and all MacLean Publishing Company papers are members of the A.B.C.

Harmonize With Decorative Effects

The value of STEEL Lavatory Partitions in Schools,

Factories, Industrial Plants and Public Buildings, needs little argument to the Sanitary Engineer or Plumber.

Their fireproof, indestructible and hygienic qualities are readily recognized.

One point that must be driven home is that

DENNISTEEL
Made in Canada

Steel Lavatory Partitions

can be harmonized without difficulty to most elaborate wash bowls, urinals, showers, etc. The steel surface takes the enamel smoothly and can be easily decorated to white, marble, porcelain, or other harmonizing effects.

We Also Make:

Steel Shelving, Lockers, Cabinets, Bins, Stools, Chairs, etc. Ornamental Iron and Bronze, Commercial Wirework of ALL KINDS, General Builders' Ironwork.

Premier Meighen Discusses National Issues in MACLEAN'S

The Rt. Hon. Arthur Meighen, Prime Minister of Canada, has written for January 1st MACLEAN'S a forceful exposition of his platform and policy.

HE discusses the bi-lingual issue, the tariff, reconstruction, the growing unrest and unemployment — but he avers that the tariff is the "one great issue of our domestic politics."

"Why is it the issue?" queries Mr. Meighen. "It is the issue, I think, because the enemies of the Government cannot oppose us on any other."

Regarding the tariff, the Premier tells readers of MACLEAN'S: "We do not propose going any higher *on any single line of articles.*"

"Is Mr. Crerar hedging?" the Premier inquires.

Of Mr. Mackenzie King he says: "He can be quoted on almost every conceivable side of the tariff issue."

Articles by Mr. W. L. Mackenzie King and Mr. T. A. Crerar will follow in succeeding issues.

"The Drama of Our Great Forests"

A BIG INSTALMENT IN JANUARY 1st MACLEAN'S

This stirring story by Arthur Heming is continued in January 1st MacLean's, chock-full of wood-lore, fascinating yarns of the luring, frozen North, and amazing tales of actual adventure. The life history of the Canadian beaver, our national animal, is unfolded in a manner that surpasses fiction, as fact so often does if truly told by a masterful writer—"the beavers—those wonderful amphibious animals of the Northland that display more intelligence, perseverance, prudence and morality than many a highly civilized human being."

Other Big Features

"The Big Time Man."

By C. W. Stephens.

A romantic story of the unromantic business of making bottles.

"Money and Motion Pictures."

By John W. McKay.

A Canadian who filmed "The Miracle Man."

"The Diamond Pickers."

By Madge MacBeth.

The girl detective finds how diamonds disappear by extra-human agency.

"Foiling the 'Free Trader'."

By Kathrene and Robert Pinkerton.

A Hudson's Bay story, where the Indian outwits his white foe.

"The City of Peril."

By Arthur Stringer.

A big slice of this serial of Bolshevistic peril.

"When Toronto Grew Up"

By Col. Geo. H. Ham.

Anecdote after anecdote of the past fifty years in Toronto.

"Margot and Peter Flower."

By Mrs. "Margot" Asquith.

The commencement and course of an amazing eight years' flirtation.

Canadian Representatives

This is a
"Q"
Foot Valve

And it Just CAN'T Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

Do You Read These Advertisements?

Every advertisement in this magazine is worth reading. It is the product of some concern that is using a modern piece of selling machinery—technical paper advertising—to present most effectively to you the leading features of its line.

These advertisers are making it easier for you to buy intelligently with the least waste of your time and theirs. They realize that a sales force can not replace this service at equal cost. They know that advertising is good business, for the manufacturer who does not advertise cannot save the cost of advertising. Consistent advertisers are progressive merchandisers. They are saving your money and their own; and it pays to do business with them.

Don't miss your opportunities. These advertisements are interesting. Some are distinctly instructive, and a glance through them every month will keep you posted on the latest developments in Sanitary Engineer.

Positive Circulators

To Be Used On Hot Water Heating Systems

When the Positive Circulator is in action it forces the water rapidly through the system, so that the hot water is carried to the radiators with only the minimum loss of temperature. It also forces the water to distant radiators where it is sometimes difficult to get gravity circulation. The pump is driven by an electric motor connected to the wiring of a building and is operated by an ordinary switch.

THE old style side arm combination was as inefficient as candle light. It was awkward, a gas-eater, slow, heated more air than water, and, like the candle, it has given place to the new and better way.

M GAS WATER HEATER
Marvel
Gas Heater and Boiler Combined

is delivered on the job completely assembled, and, with the addition of a single gas connection, is as quickly and easily installed as an ordinary range boiler.

It heats water quickly, with little gas. Is odorless, silent, safe. Brings back no complaints, avoids adjustment losses.

Made of extra heavy material. In all sizes. Tested to 150 pounds under working pressure, and guaranteed for two years. It's the best non-automatic water heater made. Write direct, or to your jobber, for prices and literature.

Made in Canada

Sold and installed by plumbers exclusively

Beaver Pipe Cutting and Threading Tools

Beavers are complete one-piece tools with no extra parts to bother you. When you start on a job with Beavers you are sure you have forgotten no dies, bushings or other loose parts.

When you change from one size pipe to another it is not necessary to stop to take out one set of dies and put in another—nor to take out one bushing and hunt around for the correct one. All you need do is: "move the handle."

Order from your own jobber.

Only a VITRO Tank Can Give VITRO Profits and Satisfaction

THE material alone hasn't made the Vitro Tank what it is to the public and the plumbers of Canada.

In fact, a lot of the folks who know Vitro as the name of "the high-class tank," don't even know what it's made of.

They expect a square deal from a Vitro Tank, just as the plumber does, because Vitro Tanks have taught them to expect it.

They expect better service—because the Vitro has always given better service. So that Vitro is not only the name of a material from which a tank is made. It means:

- The **quality** of that material
- the **way** that tank is made
- the sort of **fittings** inside the tank
- the **service** those fittings give
- the **satisfaction** the tank brings to the buyer
- the clear **profit** it brings to the plumber.

The tank that has made thousands of dollars for Canadian plumbers, and won the confidence of Canadian people, is the Vitro—

And the Vitro is made exclusively, in Canada, by

The Electric Weld *The Quality* **Range Boiler**

Remember the Trade Mark

**The Electric Weld
is the
Modern Efficient Joint**

No Rivets—No Leaks

The electric welding on these reliable range boilers produces a perfect fusion, a metal-to-metal joint like a blacksmith's forging, and gives strength to resist strain.

Electric welding is the modern, scientific way of making a seam. The method has replaced the old just as electric lights have replaced

gas and gas has replaced the kerosene lamp and candle. It represents the irresistible force of progress.

In this safe, dependable seam the metal is unweakened by holes drilled or punched. There is practically no seam. The metal is welded in solid union and requires no bolstering up with laps or rivets.

There is Complete Strength in the Electric Weld.

Standard Size—For New Work or Replacement.

They are Fully Guaranteed.

how the fire
strikes
each
section
of this*

FAMOUS "DAISY"

FIRST—The arrangement of the flues is such that the fire must come into direct contact with each section. This is highly important and will be understood by the heating engineer as an excellent feature.

SECOND—The Water Post, connecting the different sections of the "Daisy" Boiler, possesses exclusive features. This places the "Daisy" in a class by itself.

THIRD—In case of accident to any section, the water post feature makes it possible to shut off the broken section and thus permits the remaining sections of boiler to be used. When convenient, a new section may be installed without the necessity of disturbing any of the piping.

FOURTH—The openings in each section of the boiler are equal, so arranged that the burning gases strike the heating surface of each section at right angles. This allows them to absorb a maximum of the passing heat before it enters the chimney.

A Big Field of Prospects for the *Westco* Tankless Water System

In rural and suburban districts and on farms, the need of running water is urgent. The convenience and reliability of the Westco Tankless Water System appeals strongly to those people having electricity available.

These Westco features make strong talking and selling points:

- (a) Requires no storage tank. Water is pumped direct from source of supply to taps.
- (b) Entirely automatic; open tap, pump starts at once; close tap, pump stops.
- (c) Inexpensive to buy, install and run.
- (d) Is vibrationless and silent in operation.
- (e) Has no gear, no belt, no valve.
- (f) Has only one moving part, and is self-lubricating.

But Above All—Thoroughly Reliable.

Westco Pumps, Limited
707 Yonge Street, Toronto, Ont.

Handsome Profits for Westco Agents

Farmers everywhere are demanding a reliable, compact water system such as the Westco. In addition to this huge field of farmer prospects there are the suburban and outlying districts of cities and towns where the hand pump and well are still being used. **Our dealers and agents are making splendid profits.** There are still a few really good territories left open. Write us at once for our selling arrangement and other particulars.

How often do you use a Pipe Wrench?

PIPe wrenches are such common everyday tools that one is inclined to take for granted their usefulness and importance.

Think for a moment of the innumerable jobs where a pipe wrench is absolutely necessary.

Piping systems for efficient lubrication on automatic machines—Turret Lathes, Milling Machines, Hand Screw Machines, etc., could not be assembled without pipe wrenches.

Heating systems could not be installed without pipe wrenches.

Gas furnaces for hardening and a thousand and one other jobs could not be set up without the aid of the humble pipe wrench.

A pipe wrench is the repairman's or millwright's "best friend" and when he gets a good one you couldn't buy it from him.

The GTD Pipe Wrench with its drop-forged jaw—its hardened nut, and bull-dog grip has been proved by many tests to be the strongest on the market.

A GTD Pipe Wrench with its non-slipping, hard-gripping, long-wearing jaws is an indispensable part of the tool-kit of any mechanic, repairman or millwright.

Get one from your nearest hardware store. Insist on "GTD."

TALKING "SPENCER" MAKES MANY A SALE

That could not otherwise be effected

HOUSE SIZE

type of building where Spencers are successfully operating. We manufacture in Canada the Spencer Cast Iron Sectional type of Boilers in ten different sizes ranging in capacity from 600 square feet to 3,600 square feet, and the Spencer for steam is of fire and water-tube steel construction, ranging in capacity from 1,000 to 10,000 square feet, there being twenty sizes.

Let us co-operate with you on the sales in your district. There is a SPENCER for every heating requirement.

Give us your address—NOW.

SOME of the REASONS—

- 1st.—Every Owner of a Spencer Self-Feeding Boiler saves from THREE to FIVE Dollars on every ton of coal required to heat his premises, and is DELIGHTED with the constant service he receives from the Boiler with so little attention.
- 2nd.—This small-sized No. 1 buckwheat coal which the Spencer burns successfully, is always available. The only other known types of boilers that will burn it are the mechanically-equipped boilers, and many factories are now equipping their boilers to burn coal in a powdered condition. Of course the Spencer will successfully burn fuel in the larger sizes.
- 3rd.—The magazine of the Spencer holds a 24-hour supply of fuel. The fuel feeds at a tempered condition in thin fires over the arched grates in exact proportion as the fuel is consumed, thus eliminating waste and allowing perfect control of firing conditions.
- 4th.—Spencer Boilers are known to maintain temperatures for a period of 48 hours in the coldest weather without attention.

THOUSANDS of Spencer Boilers are now in operation in various parts of Canada and the United States. We can refer you to almost every known

"Standard" Pedestal Lavatories, owing to their beauty of design, their durability and their cleanliness, appeal to the owners of the better class of homes.

Plumbers, Health and Sanitation

Health is the most important factor in every home. Good health in the home depends on satisfactory sanitation, and sanitation is the plumber's business. Many homes have up-to-date sanitary equipment, but there are hundreds of homes in which new designs should be installed ac-

cording to present plumbing standards.

If we say that good health depends on perfect sanitation, then there is an unlimited amount of business where new fixtures can be sold to replace the old.

Let's not overlook this during a period in which new work is not plentiful.

How I Came To Join The Shakers

By Booster Biny

Well, sir, if there was anything I used to hate, it was to shake.

That is to say a boiler—not rugs or carpets or dust cloths.

You know every time I used to shake our old home boiler, I'd forget all my religion, and come upstairs mumbling things Mother said were meant to drive mules with.

Then one day Dad swapped in that old tea kettle for a Burnham, with grates that shake half at a

time. Just naturally they shook half again as easy. So I straightway said I had joined the Shakers. After which I joined in on making the Burnham boilers.

That's my job now. That and making you see that the way we make them, is the way a boiler ought to be made; when it's made right.

One of these days you, too, will join the Burnham Shakers. I can wait, but you'll wish you hadn't.

An Apprenticeship System for Canada

J. W. Bruce, International Organizer of Plumbers' and Steamfitters' Union, Outlines Suggested Apprenticeship Plan to Relieve Present Difficulty Through Shortage of Mechanics in Plumbing and Other Trades Connected With Building Industry

APPRENTICESHIP is a problem which is to-day receiving much attention at the hands of master plumbers individually and in their various organizations throughout Canada. It is recognized that unless a sufficient number of young men of good type can be drawn to the plumbing trade its future is jeopardized.

In this connection it is of interest to note that John W. Bruce, International Organizer of the Plumbers' and Steamfitters' Union, laid down an apprenticeship plan at a recent meeting of the National Joint Industrial Board of the building and allied trades in Montreal. In speaking of the plan, Mr. Bruce stated that due regard would have to be made for the climatic conditions existing and the seasonable nature of the industry. Care would also have to be taken, he said, not to overload any one industry with apprentices which the future demands of the trade could not absorb, and protection must be assured to the interests of all concerned. The following plan would, it was thought, help to relieve the present difficulty of supplying a sufficient number of mechanics in the plumbing trades:—

Report of Committee on Apprenticeship

The problem of meeting the demand for skilled mechanics in the building industry is one that merits the attention of those particularly engaged in same, in an effort to reach some conclusions as to how the situation can best be met, and with the best results for all concerned.

In seeking for some causes for the failure to secure the necessary number of boys to engage in the industry, we must recognize the lack of inducements for boys to enter the trades with any degree of assurance that they will receive the necessary instruction that will aid them in becoming proficient mechanics; the neglect of the avenues of education along technical lines; the intermittent nature of the employment offered many boys without any due regard for their welfare; the desire of some employers to use boys during rush period only. The general lack of interest on the part of employer and employee and the consequent lack of knowledge, with no real opportunity for a boy to acquire the training so essential to make a good mechanic, have been some of the chief causes for our failure in the past to meet the situation, and therefore we are suffering

to-day because we have not held out those inducements that are so necessary to encourage boys to enter the various branches of the building industry.

The general conditions arising out of the war, due to the serious wastage of our man power, have now forced the matter to our attention, so much so that we are conscious that this vital matter has been sadly neglected, and if we are to have any relief and bring about a condition that will aim to fulfil the requirements of the industry, we must meet the situation with proposals that will at least lay down new principles based on a solid foundation, to meet the needs of the industry in the future.

We are conscious that we will meet with many objections, and experience many difficulties in attempting to solve the problem. But if we are anxious and willing, and desire to succeed, it will need the hearty co-operation of those who realize the seriousness of the problem, and the necessity of trying to adjust it. So we must be prepared to launch a scheme that can at least merit the support of the present organizations in the building industry.

Must Protect All Interests

In outlining any plan due regard will have to be made for the climatic conditions existing, the seasonal nature of the industry, and protection will have to be afforded boys entering into apprenticeship. It is useless from our standpoint and a waste of time and energy, also a serious economic loss to the community to overload the industry with apprentices, which the future demands of the trade will not absorb, and any proposition advocated shall be within the bounds of safety, assuring protection to the interests of all concerned.

The various schemes in operation in a number of trades, as applied to given localities, are producing good results, and their unification and extension may materially help in devising ways and means to meet the situation. But as a means of placing the question outside the realm of partisanship, and remove the feeling that the claims of the individual organization or trade are dominating factors, we must consider the propositions in a new light by first considering the essential points necessary, and try and solve the problem on a national basis, and one that will meet the demands of the industry.

It appears now that our hopes of meeting the situation lie in a revival of a well-established and defined apprenticeship system; with a very definite objective, under the supervision and joint control of our respective organizations.

National Apprenticeship Council

1. There shall be established a representative body from within the organizations of the building industry charged with the advisory and supervisory functions as set out below. This body to be known as the National Apprenticeship Council of the building industry.

2. The National Apprenticeship Council shall consist of—

- (a) One employer for each branch of the building trade.
- (b) One journeyman from each branch of the building trade.
- (c) Two architects and two industrial engineers.

Who shall be members of their respective organizations and parties to the rules governing the Council.

3. The Apprenticeship Council shall have the power to make such regulations for the conduct of the Council and the appointment of such officers as they from time to time determine.

4. Local councils shall be formed under the authority of the National Council, with power to carry out the rules and objects of the Council as hereinafter set forth.

5. Local councils shall be constituted on the same basis as the National Council, but shall have power to modify the number if in their judgment it is desirable.

6. The National Council shall issue forms of indenture for each trade to be used exclusively by all employers parties to this scheme and apprentices availing themselves of its operation.

7. The boys shall be apprentices to the employer, and the employer shall undertake to give every apprentice the fullest opportunity of efficiently learning the trade—

- (a) In the workshop and on the job.
- (b) By attendance at a technical school for about one-sixth of his time, or not less than two half days each week during the employers' time and without deduction from wages.
- (c) The apprentice shall be bound to attend an evening course at least two evenings each week during school terms.

8. The council shall assume responsibility with the employer for providing appropriate facilities for the apprentice to learn all branches of his trade, and to this end shall become party to the indenture. The responsibility is, however, subject to the right of the council to dissolve the apprenticeship in case of serious default on the part of either parties.

9. The local apprenticeship council shall prescribe the terms and conditions of apprenticeship to the various trades in each area, subject to the approval of

Using Premise Report Card

Report Shows Condition of Fixtures in Every House Worked in—Number Each Piece of Literature—Big Returns in Six Months

EVERY enthusiastic supporter of T. E. B.'s method of co-operation and interchange of ideas submits the following plan for the consideration of the trade.

This man was one of the first contractors to use the T. E. B. premise report card. Up to date he has compiled information from these report cards that is worth thousands of dollars to his business.

The thought occurred to this contractor that there was an immediate use for the report card, in connection with the bill for the work done, aside from that of acting as a guide for circular sales letters. Of course, he could send literature at any time covering new fixtures to replace those that were reported as out of date or defective, etc. To accomplish this he worked out the following plan:

The Plan

Every time a journeyman is sent out to repair a job, he makes a premise report card showing the condition of every fixture in the house. He also makes a note of any appliance or fixture that might be sold in addition to those already installed. This report is handed to the bookkeeper with the charge sheet. The bookkeeper, when entering the charge in the books, makes a note—directly under the charge—of the kind of literature that should go to the customer with the bill. When the stenographer makes out the bill, she encloses the literature thus indicated in the envelope with the bill.

As an example, if the job in question

was the repairing of a range boiler, literature describing a combination boiler and gas heater, or other similar literature, is enclosed with the bill.

The contractor's reason for this is that this range boiler is on its last legs. The journeyman has told the customer that the repair he has made may not prove satisfactory and may not last for the reason that the boiler is decayed, and is likely to spring a leak at any time.

Therefore, by immediately starting a campaign to sell the customer a new appliance of some kind, the literature reaches the customer while in a receptive mood. More than this, the occasion offers an excellent opportunity of obtaining valuable results from advertising pamphlets furnished free by manufacturers.

Literature Numbered

To go with this plan he has developed a chart that shows at a glance the kind of literature that should be sent to each prospect in cases of this kind. To simplify the work, he has assigned a number to each piece of literature sent him by manufacturers, and has constructed a cabinet over his stenographer's desk with a pigeon hole for each circular. These pigeon holes are numbered and indicate the number of the circular. His chart is devised in the following way:

Repairing range boilers—enclose circulars 17-28-39.

Repairing water closets—enclose circulars 28-45-106.

Repairing sink faucets—enclose circulars 6-18-36.

Continued on page 28

the National Council. It shall determine the period of apprenticeship, the rate of wages to be paid, the hours of labor, the working conditions, and all other matters relating to the training of apprentices.

10. The local council shall arrange, where possible, with the local authorities for classes for apprentices, and make arrangements for the hours and period during which apprentices shall attend.

11. Local councils can, for cause, cancel indentures when considered desirable, or arrange for the permanent transfer of an apprentice from one employer to another.

12. An examination board of not less than three members shall be appointed by the council and shall conduct the examinations for apprentices at stated periods.

13. The local council shall determine the number of apprentices which may be necessary in their own area to maintain the efficiency, due regard being given to the possibilities for the future expansion or contraction, and it shall regulate

the admission of apprentices to the various trades in accordance with these conditions, and subject to the trade agreements existing between the employer and employees.

14. In order that apprentices working under the direction and supervision of the council may have the best opportunity of obtaining a wider knowledge of their respective trades, it shall be open to the council by agreement with the employers to arrange for short periods of transfer or exchange of apprentices where it appears that by such transfer the apprentice shall acquire special knowledge or experience.

15. All complaints or disputes arising between employers and apprentices which cannot be settled between the parties in regard to the conditions or work, discipline, wages, or other matters, shall be referred to the local council, who shall have power to adjust such disputes, which shall be binding on all parties, subject, however, to appeal to the National Council.

Heating and Ventilating

Combination Heating Systems

First article of an important series written exclusively for Sanitary Engineer by
N. A. Kearns

THE accompanying drawing shows, in a general way, the various parts of a combined warm-air and hot-water system of heating. "A" is the hot-air furnace, which in principle is simply a stove incased in iron or brick. The cold air enters the chamber, formed between the casing and the furnace; passes over the heating surface of the furnace, and thence into the distributing pipes.

The casing, which is here one made of galvanized iron, is indicated by the letter E. The fire-pot is indicated by the letter B, the ash pit by C, the combustion chamber by Z, and the radiators by D.

The letter G indicates a warm air leader, which conveys warm air to the registers I and I. The register on the upper floor receives the warm air from the wall stack H.

A return cold air face is shown at L. This face allows the cold air to return to the joist lining K. From here the cold air passes to the return pipe J and thence into the heater chamber.

It will be noted that there is an outside air supply face provided. This is shown at M.

The cold-air return face at L is fitted with an alternating valve, set so that when the outdoor supply of cold air is passing through the joist lining the opening at L will be closed. This valve also closes the passage against outdoor air when the supply is to be taken from the room.

Combination Boiler

The combination boiler is shown just above the fire-pot, at F. The water heated in this boiler passes to the cast-iron radiator by way of the supply pipe O. This radiator is shown at N. W is a quick opening valve. V is a wood-wheel air-vent.

The water returns from the radiator to the boiler by way of pipe P.

The expansion tank R is connected to the return pipe P by means of the "expansion pipe" Q.

The vent pipe, at the expansion tank, is indicated at G. The overflow pipe T is to be carried to some convenient drain within the house.

Floor and ceiling plates are shown at U.

Later on, when we take up the re-

quirements of a proper combination system of heating we may specify certain details which are not frequently found in systems of this type, and in doing so we wish to direct the reader's attention to the fact that combination systems have much to recommend them apart

furnace installation: A furnace is set up in a basement where the floor is of earth. This furnace rests on a few bricks, and no attempt has been made to close the joints of those bricks against ground air. Crossing under the furnace there is a tile sewer pipe. This pipe is, no doubt, broken; the smell of sewer gas is forever present when the furnace is in operation.

One dinkey cold air register is set in the hall. This cold air register connects to the furnace-casing by way of joist-

from their relative low cost when compared with all-hot-water or all-steam heating systems.

We do not suppose that there is one man in the heating trade who does not realize that warm-air heating plants have received a great deal of condemnation because of the "cheap" installations that were at one time the rule rather than the exception. In fact, there is hardly a town in the country where some horrible example of a "skinned" job can not be found.

A "Skinned" Installation

Here is a common "skinned" type of

lining and a small cold-air pipe. The area of the cold-air pipe is about one-half of the combined areas of the warm-air leaders; but, even at that, its area is much greater than the effective area between the joists, the space concealed by the joist lining being reduced by the cross-bridging of the joists.

No argument will convince the owner of such a plant that a properly installed warm-air heating system will give any satisfaction. He will refuse to believe that, within certain limitations, there is no system of heating residences that is

PATTERNS FOR SPHERES

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri.

LIGHT AND HEAVY IRON BALLS

WHEN a workman makes a sphere it often puzzles him which method to apply; the zone method or the gore method.

The zone method is the most suitable for all around work. It is easier to assemble, quicker, and is considerably stronger.

The gore method is generally made in so many pieces, that it is hard to put the curvature in the pieces, and this also helps to elongate the sphere from pole to pole, rather than absolutely round.

To set out the belt method, first draw the elevation and divide the body up so the middle belt will be a straight strip.

The other flaring belts are made the same as a funnel or any true flaring article and is described from o in this case. The dished top is set out equal to the radius of the slant height.

These belts must be bumped out to conform to the curvature of outline of elevation. A little edge is allowed; but lines are described so the belts can be held straight.

The circumference of the middle belt is made equal to the diameter of sphere times 3.1416, and is 8. 5.8 inches in this case.

The second belt is made to conform to this girth, and,

after the belts are shaped up, it is often necessary to take up a bit of girth or layout one or the other belts a bit.

This is done so a snug fit is produced, and no buckles are forced in the one edge.

The gore method is very simple, a quarter of the elevation is divided in equal spaces and lines are dropped to the centre line of plan.

The mitre lines in plan are set apart at such widths as you desire.

That is, the ball is divided in say 12 equal parts, then one part would be straddled over the centre line of plan, and this is the gore.

From elevation drop lines to cut these mitre lines as shown. Then pick the girth from 1-6 of elevation and set it off as 1-1 in pattern.

Draw stretchout lines, and from each point in mitre lines project lines to intersect those of similar number in stretchout.

Trace a line through these points and the gore is finished. A small lap is allowed for soldering. Each gore is bumped to suit the curvature of ball.

Enough of these patterns are cut to make the ball, and all are bumped out, rounded out, and the gores are then assembled.

Hints on Seasonable Advertising

The reproduction of some sample advertisements herewith will give some idea of the lines being advertised by others in the trade in all parts of Canada, and will impart some ideas or suggestions which others may incorporate in their local advertising.

A NNOUNCING important plumbing and heating work done locally as the basis of the plumber's advertisement in the newspaper, is a plan which has been followed by some of the most progressive men in the trade. Young & Dunn, Dartmouth, N.S., follow this plan in a recent advertisement, which reads: "The plumbing and heating of the new Emmanuel Church was done by us. These are two of the most important factors in any building. The heating must be right to give the proper

times larger than those from the ears to the brain. Therefore when possible use a picture instead of words, and make the words mere connectives for the picture.

2. Confine the attention of the exact subject by drawing outlines and putting in the divisions; to make certain that all will think about the same thing.

3. Aim for dramatic effects—study them out beforehand. This holds attention.

4. Red is the best color to attract and hold attention, use plenty of it.

5. Use few words, short sentences, small words—big ideas.

6. Tell why, as well as how.

7. Don't be afraid of big type, and don't put too much on one page.

8. Don't crowd ideas. No advertisement is big enough for two ideas.

9. Before you try to convince anyone else, make sure you are convinced. If you cannot convince yourself, drop

Faulty Plumbing Is Costly No Matter How Low the Price

Our plumbing is being built up on a "Quality First" basis, and we intend that every job executed by us will be up to that standard, whether that job be merely some small repair work or the installation of a complete new bathroom outfit.

IF YOU ARE GOING TO BUILD

We will be pleased to quote you a price on the total fixtures you will require and the cost of their installation.

Gas and Steam Fitting Furnaces supplied & installed

Sanitary Plumbing & Heating Co.

Ad. by R. Chestnut & Sons, Fredericton, N.B.

the subject. Don't try to "put over" anything.

10. Tell the truth.

* * *

There are many good suggestions contained in this statement which plumbers can keep in mind when planning their advertising.

* * *

"The Trump of Doom," says an ad. by Shea's Plumbing Shop, Fredericton, N.B., "will sound no louder than that old wornout closet does to the startled ears of your guests who use your bathroom. End this embarrassment for your family and your guests. A — water closet will do this at a cost which is small compared to the satisfaction and comfort it brings."

It is wise in all newspaper advertising to have some definite basis for the ad. and avoid general statements as much as possible. A little study of the plumbing requirements of the home will soon reveal many points which will form the basis of an ad. which will hit home hard to the minds of all who read it. Few people have not ex-

Bathroom Fixtures and HEATING SYSTEMS

We are also well equipped to serve you with goods to meet the needs of certain homes. Perhaps it is the article you have been looking for, for your home: Galvanized cisterns; Out door tanks, all sizes; Oil wagon tanks, Eastern and well pumps. White enamel steel or cast sinks. Arnie Oil burner can be fitted in any range or stove. Anything made to order in the metal line.

McLary, Hecla and New Idea Furnaces Hot water and
Steel and Cast Radiation.

CORNWALL & BLOCK

Ad. by Cornwall & Block, Minnedosa, Man.

reader's interest has thus been secured the advertisement carries a message which bears a good recommendation of the quality of this firm's work.

* * *

The use of clear cut illustrations of up-to-date bathroom fixtures is used by many dealers and there is no doubt of the value of this plan. In this connection a prominent man in the trade makes the following rules as best to follow in planning local advertising:

* * *

1. The nerves from the eyes to the brain are many

perienced the embarrassment such as is mentioned in this ad., and perhaps many have postponed action until a later date and then forgotten to have the trouble remedied. A general advertisement would mean little to such a prospect, but a direct statement such as this will be found to find a few who have been postponing necessary work and to those it will serve as an effective reminder.

* * *

The seasonable appeal is always a strong one with plumbing fixtures. Now that the cold weather is approaching is time to have plumbing work attended to. J. T. Simms, plumber, of St. Marys, Ont., used this as the

Down in the Cellar

Is where SANITARY PLUMBING should begin. The sewage and other pipes should be absolutely air-tight at the joints, the grade so arranged so as to provide a quick outflow. We are skilled at that kind of work. No home where we have done such work has been or ever will be "gassed." Our plumbing work is sewer gas proof.

HENRY E. WHITE & Co

Plumbers and Electricians,
250 COLBORNE ST. Phone Bell 531

Ad. by Henry E. White & Co., Brantford, Ont.

basis of a small advertisement, which states: "We would like to remind you that this is the proper time to have your heating apparatus put in good shape for winter. Plumbing, as it should be done, is the kind of plumbing we do."

* * *

Another good type of advertisement is that used by Barr & Anderson, Ltd., Vancouver, B.C., which deals with a number of different points. It reads as follows:

"Plumbing, when it's a matter of plumbing in a big way, we believe we stand supreme in Western Canada. Hospitals, apartment houses, business blocks, public buildings, the plumbing of buildings like these throughout British Columbia stand as monuments to the efficiency of our work. And there's another point—no job is too small, either, for us to give it our very best care and workmanship."

Here is an effective appeal for plumbing work, both large and small, and backing up the claim of a share of such work with the statement, above referred to, dealing with work already done on well-known buildings.

* * *

"Twenty-eight years of practical experience installing

plumbing and heating systems, coupled with a staff of competent mechanics, places us in a position to give you the very best job it is possible to secure," says an ad. by Vagg, Wilson & Co., Regina. This firm makes use of the argument of long and satisfactory service as its reason for claiming its share of local plumbing business.

* * *

An invitation to come in and inspect a domestic water supply and sewage system is embraced in an advertisement by Jos. W. Chambers, Wolseley, Sask.

Plumbers in rural districts have a very fertile field for the development of sales of water systems, electric light

Teach Your Dollars To Have More Cents.

Increase the purchasing power of the money you spend for fuel to warm your home. There are many ways in which fuel may be wasted. By examining your furnace or heating plants we can tell you whether it is wasteful or economical. This you ought to know.

Young Plumbing Co., Ltd.

systems and sewage disposal systems and right now is a good time to gather in such trade for farmers have harvested a bountiful crop, they have a little leisure on their hands and a little judicious sales talk will convince them that their machinery of production cannot stand the strain year after year without some attention. These modern systems will also help to make the farm more productive, as well as improving the standard of farm life. Arranging a display in the store with the use of model buildings and getting those interested to the store to view such a display, is a good way of arousing interest in such lines.

John Lewis Co., Ltd., Belleville, Ont., runs a series of advertisements with a sketch entitled, "Take a Tip from Torchy." The subject of one of the latest of these ads. is radiators. The ad. says, "Nothing will your comfort mar if your plumbing's up to par." "A radiator that's in good working order radiates good health and good fellowship. Promote the get together spirit in your family circle, always remembering that comfort is the tie that binds."

This is a good subject for ads. at this season of the year and an important point is that dealing with comfort in the home during the cold weather.

COMBINATION HEATING SYSTEMS

Continued from page 15.

in any way superior to that of the warm-air furnace.

Defect of Overheating the Air

With many installations there are certain defects to which we must give some consideration. There is the defect of the overheating of the air; the vitiation of the air by the escape of gas through open joints; and last, but by no means least, the imperfect distribution of the heat.

The overheating of the air may be avoided by the use of a furnace with sufficient heating surface in proportion to its grate area. With a furnace of this type there will never be the necessity of driving the fire so hard that the joints will open and permit gas to escape into the house.

The imperfect distribution of the heat may be overcome by careful location and

proper proportionings of the registers and pipes.

However, there may be circumstances preventing warm air reaching certain rooms, and it then becomes necessary to provide auxiliary heating surfaces for certain rooms that are at some distance from the furnace. Hence the combination of warm-air and hot-water.

The Furnace

Because the greater part of the heating effect of the combination system must come by way of warm air, we must take up some of the principles of warm-air heating before referring to the details of the hot-water part of the apparatus.

In our general description we referred to the cold air entering at the bottom of the heating chamber and then passing on to the distributing ducts.

It is the free passage of the air over the radiating surfaces of the furnace

which is the means of conveying the heat from the fire to the rooms.

The outer surfaces of the fire-pot, radiators and combustion chamber form the radiating surfaces of the apparatus.

Although these surfaces are termed radiating surfaces it should be remembered that the heating is not effected by radiation. The heating is entirely by means of connection.

If the heating surface is not of sufficient area the air will be overheated before it enters the rooms. This surface should be of sufficient area to cool the hot gases to a temperature within 100 degrees of the temperature of the air in the warm-air leaders.

Ratio of Heating Surface to Grate Area

In many furnaces the ratio of heating surface to grate area is not enough. It should be somewhere about fifty to one. This ratio, however, can not be constant,

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

SECTION FIG. 32.

Article No. 24 of the Series—Illustration No. 32

(Continued from last issue)

Fig. 32 illustrates a combined single chamber septic tank and artificial filtration bed, suitable for a large mansion where the adjoining land cannot be utilized for filtration purposes. The septic tank is similar to those previously described having concrete baffle walls protecting the inlet and outlet openings. Current breakers constructed of wood can be placed below the inlet baffle wall to break the velocity of the incoming sewage and prevent disturbance of the deposited sludge, if considered necessary, by nailing same to the wooden plugs built in the concrete walls.

The liquefying septic tank has many advantages over the sedimentation tank owing to the decomposition of part of the sludge which is a great saving in cleansing operations. Still the clarified effluent from a liquefying tank is very much more offensive and stronger, thus it places more work on the oxidizing filtration area caused through its longer contact with the decomposing sludge compounds during the process of purification so that whilst the septic tank reduces to a certain extent one of the greatest evils

in sewage disposal—namely the sludge problem—yet again the clarified effluent from a settling tank does not require the same amount of treatments as that from a liquefying tank, but until some other more economical system is adopted for the destruction of sludge, there is little room for doubt that the best and cheapest form of tank installation for small communities is either a well-designed liquefying tank or modified type of same.

The longer sewage can be detained in the tank the greater the destruction of organic matter and the less offensive will be the sludge, so that in practice a limit must be drawn for economical construction on the tank accommodation.

In designing septic tanks suitable for large buildings the constructional design can follow those previously illustrated for private houses except the sizes should be increased (which must be governed by the number of persons this installation has to accommodate).

EDITORIAL COMMENT

BRIEFS

ALDERMAN F. R. MAXWELL, of Toronto, who is also president of the Canadian Society of D.S & H.E., has been appointed chairman of the local board of health. If more capable sanitary engineers were members of local boards of health it would be greatly in the interests of improved sanitary legislation.

ONE of the best ways to increase the scope and importance of the plumbing trade in Canada is for operators to make practical use of some of the suggestions outlined in this and other issues of Sanitary Engineer. Look over the articles on use of sales letters, use of premise report cards in this issue. Every issue contains a number of such articles based on other plumbers' experiences.

AN APPRENTICESHIP SYSTEM FOR CANADA

ONE of the surest ways of placing the plumbing business of the future on a higher level, the end to which master plumbers of to-day are striving, is to give the apprentices of to-day, who will be the master plumbers of to-morrow, the utmost assistance. The apprenticeship problem has assumed serious proportions in the plumbing trades in recent years owing to the fact that this particular trade failed to attract the right type of young men. The result has been a marked shortage of such help, a shortage which would have been accentuated had the building industry not become practically inactive. Master plumbers, through their organizations, have taken some steps toward solving the problem by taking hold of the material in hand and making it necessary for apprentices to attend a certain number of technical school classes in order to secure the valuable technical knowledge of which many of the plumbers of to-day were deprived. This action is to be highly commended, and the results of such instruction have been quite apparent, but concerted action among all the trades interested in the problem has been lacking.

It is in this latter connection that the report of J. W. Bruce, International Organizer of the Plumbers' and Steamfitters' Union, advocating a National Apprenticeship Council including all

branches of the building trades, is of interest and importance. The application of this plan will insure that the interests of employer, journeyman, architect, engineer and apprentice, will be well looked after. The responsibility is placed on the employer for giving the apprentice every opportunity of learning every detail of the business and for seeing that he attends, both during the employer's time and at night, a school of instruction. Full authority is vested in the National Council for seeing that such terms are carried out and the Council assumes responsibility with the employer for providing appropriate facilities for the apprentice to learn the trade. Members of the Council will conduct examinations.

As a whole, the report of the apprenticeship committee covers all phases of the problem in a very thorough manner, and its application should solve many of the difficulties involved.

AN OUTSIDER SPEAKS OF PLUMBING

WHAT is perhaps one of the most important phases of educational work recommended to plumbers is that having to do with improving relations between the craft and the public as a class. In this connection it is refreshing to read the address made by a university professor before a recent meeting of master plumbers in which he states that the plumbers' charges are not excessive compared with other necessities, and that our forefathers would gladly have paid ten times to-day's costs for such facilities to improve the comfort, health and cleanliness of their times. In order to discourage the common idea that all plumbers' charges are excessive, it is advised that the plumber have enough facts at his disposal that would combat any critic. The plumber can also take credit for his share in the development of plumbing in the past fifty years, pointing out that whereas bathrooms and radiator heating were only in the homes of the wealthy these facilities are now provided for everyone of ordinary means. The nature of the service rendered, period of service (plumbing styles do not vary as do some other commodities) and the cost and maintenance of his equipment and work in every home, are suggested as good points on which the plumber can base his educational efforts.

Sales Letters Build Plumbing Business

Keep Record of Letters Sent—Five or Six Typed Letters a Day
Better Than Lot of Printed Circulars—Some Letter Suggestions

IT would appear that a large number of plumbing and heating contractors are bothered by a misunderstanding about how, when and in what quantity circular sales letters will prove economical and effective business getters.

There seems to be a very general impression that it is not worth while to bother with sales letters except under circumstances where they are sent out in considerable quantity. Nothing could be further from the right idea than this, according to a report by the U. S. Trade Extension Bureau. As a matter of fact, the average, usual plumbing and heating establishment is unlikely to have a list of prospects so large as to require quantity production of these form letters.

In the ordinary case a contractor will have the names of, say, a couple of dozen people who are prospects for new bath room installations; the names of twenty-five or thirty who are prospects for extension or improvement of heating equipment; the names of fifteen or

twenty who are prospects for farm water systems; and a similar number of names in each case as prospects for other equipment, fixtures or service.

The plumbing and heating contractor who finds himself in the situation just mentioned with reference to his list of prospects, will, quite evidently, have no use whatever for the number of form letters that would justify having them printed or otherwise made up in quantity. On the other hand, it is almost absolutely certain that his stenographer or office assistant would have ample time in which to send out, daily, at least five or six of these sales letters, to that number of the contractor's various prospects. There would seem to be no good reason in the world why a contractor so situated should fail to take advantage of this opportunity for building business, either immediate or future.

Keep Record of Letters

The only information required in any case for the sending of circular sales letters is to know who is likely to be a

prospect for some particular thing, and to see that they get a circular letter that would be likely to turn their interest toward the establishment of the contractor sending out the letter. Such a record would, of course, have to include some understandable method of showing who the letters were sent to, when they were sent, and what the letters were about. Any record that will meet this demand will serve the purpose and enable the necessary follow up work to be done intelligently.

If a contractor finds that he has a few prospects listed for different articles and for any reason is unable to have the necessary letters typewritten in his own office, it would be a matter of only a very small expense to get some typist working elsewhere to take care of this limited amount of work after regular working hours.

Good For Small Business Man

This method of promoting business is especially to be recommended for the

A. Plumber & Fitter Co. Plumbing and Heating Engineers

(Date line)

Dear Mr. (or Mrs.)

May the happiest day you have ever known be the dullest you will experience during the next 365. That's our New Year's greeting to you.

Everyone is wishing you much happiness and prosperity during 1921, but it is our earnest desire to make this a reality for you.

A well-heated, comfortable home with a beautiful bath-room, a convenient and easily-cleaned kitchen sink, together with labor-saving laundry tubs and a handy vacuum cleaner, will do more to bring real happiness and contentment than mere words.

These mean a real happy New Year, with no misdirected energy, little effort, time saved, and good health; without which prosperity is a term unknown.

Will you let us make the New Year happy and prosperous for you? Our services are entirely at your disposal. Simply command and we'll obey.

Yours obediently,
(YOUR NAME)

Mr. (or Mrs.)

Dear Mr. (or Mrs.)

We hope you will have a most Happy and Prosperous 1921.

You know your plumbing and heating man is not all bad. We're just human, and being human we sometimes make mistakes, for which we often get cussed and discussed.

But plumbing and heating will go wrong—wear just as anything else about the house—and then a doctor is needed at once. As Doctors of Plumbing we want you to feel perfectly free to call upon us any hour of the day, whenever we can be of the slightest possible assistance to you.

Like other mortals, we are making New Year resolutions. One hundred per cent. service is our motto for 1921. So if that heating plant misbehaves itself, or if Jack Frost gets nasty with your water pipes, you can put your finger on our latch string by calling Main 6000.

All we ask is that you call us when you've got something you are particular about or in a hurry for. You'll receive the best service ever. We are,

Yours to command,

A SALES LETTER A DAY KEEPS THE SHERIFF AWAY

You've heard the old saying that sounds something like the foregoing sentence. In this little remark Old Doctor Business Builder gives you a prescription that's really a wonderful "pick-me-up" for a sluggish order book. In fact, the only way this medicine can be improved on is by increasing the dose and sending several letters, also doing a reasonable amount of other good advertising.

Two letter suggestions for this month, as shown herewith, are a couple of cracker jacks as promoters of general good will. Incidentally, either or both of them will do much to remind the one who gets the letter that you are still in business and able and willing to give them top-notch attention.

Get a jump on your New Year's resolutions and make it a point that you send out letters like these to all your friends and customers. Then just compel yourself to keep the good work up along the same lines, throughout the New Year. You'll be glad you did, when next December rolls around. But Don't, Don't, Don't, Don't expect overnight results. If you do you're sure going to be sadly disappointed.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

TORONTO PLUMBERS' UNION ELECT ITS OFFICERS

At the meeting of the Canadian National Plumbers and Steamfitters Union, No. 146, held in Toronto, the following officers were elected: President, W. Patterson; vice-president, J. Falvy; secretary, A. Wright. The union reports that all members are at present employed, and that the membership has been greatly increased during the past few months. The meeting endorsed a resolution against the practice of allowing American architects to draw plans and specifications for the public buildings in Canada.

HAMILTON PLUMBERS ELECT OFFICERS

Hamilton, Ont.—The Hamilton Society of Sanitary and Heating Engineers held their annual election of officers at the recent regular meeting. The new officers are as follows:

President—A. E. Fletcher.

Vice-President—Thos. Arthurs.

Secretary-Treasurer—P. J. Smith.

STEAMFITTERS SECEDE

Officers of Steamfitters' Union No. 665, Buffalo, N.Y., make public a resolution recently adopted declaring against closed shop regulations and announcing its withdrawal from the international steamfitters' organizations and the American Federation of Labor.

The local will continue its organization and expresses confidence in its ability to maintain present wage scales and hours of labor by increased production.

"The increased production that our freedom from outside dictation will enable us to deliver will mark all the reduction in costs our employers can fairly ask," the resolution states.

ONE - ROOM DWELLINGS UN- SANITARY

Hamilton.—One room dwellings, commonly known as shacks, were roundly condemned by Inspector W. F. Thornley at a meeting of the Board of Health. He urged that the civic bylaws be amended so as to make it unlawful for families to occupy such buildings, adding that living conditions in such an environment were insanitary and improper. Inspector Thornley said there were far too many of these one-room dwellings in the east end of the city. Controller Davis, chairman, said he hoped the board would endorse the recommendation of Inspector Thornley.

PLUMBER CHAIRMAN TORONTO BOARD OF HEALTH

F. R. Maxwell, president of the Canadian Society D. S. and H. E., who was returned as alderman in the Toronto municipal elections, has been appointed chairman of the local Board of Health.

CHATHAM ANXIOUS REGARDING HEAT

Chatham.—Anxiety is being felt on the part of patrons of the Chatham Steam Heating Company regarding the prospects for heat during the balance of the winter. The company serves heat to a large proportion of the people in the business section of the city, utilizing for this purpose the exhaust steam from the plant of the C. W. and L. E.

At the meeting of the directors of the Chamber of Commerce the situation was discussed, and an effort will be made to solve the problem for the steam heat users who have no other way of heating their buildings. The Chatham Gas Co. may be successfully applied to for a supply to tide the users over until the end of the season, and it is probable the Steam Heating Company will erect their own steam plant to provide the service next winter.

INCREASE CALGARY WATER RATES

Calgary, Alta.—Increases in water rates, which will provide close to \$20,000 additional revenue for the department, overcoming the present deficit and providing a start towards a reserve surplus fund next year, were adopted by the city council at the final meeting of the year. The schedules finally adopted provided a compromise on the first recommendations of the commissioners, whereby the flat rate minimum for the year will be made \$10.50 instead of \$9.50, as at present.

RULING UNDER INCOME WAR TAX 1917 RE STOCK DIVIDENDS

The following ruling has been issued by the Finance Department, Ottawa, concerning stock dividends:

"Dividends paid exclusively from profits realized before the 1st January, 1917, may be distributed on or before the 31st December, 1920, without being liable to taxation. Dividends distributed after the 31st December, 1920, shall be subject to taxation irrespective of the time profits were realized."

Attention is particularly directed to the time limit fixed by the above ruling of the Finance Department.

MONTREAL HOUSING LAW A DEAD ISSUE

Montreal.—"The housing law is a dead letter so far as Montreal is concerned," said Chairman Decary referring to the delegation that waited on the Administrative Commission. "The Administrative Commission will not take any further steps in the matter, at least not with the present law," added the chairman.

Maritime News

PLUMBER AND TINSMITH ELECTED TO BOARD OF DIRECTORS

St. John, N. B.—The annual meeting of the St. John branch of the Canadian Building and Construction Industry Association was held in the Board of Trade rooms, with the president, J. A. Grant, in the chair.

This organization was formed in St. John last year, and is affiliated with the Canadian association, with headquarters at Ottawa. The reports of the president, secretary and other officers were read and these showed that the association was in a flourishing condition.

The annual convention of the association is to be held in Winnipeg on January 19, and the president, J. A. Grant, and W. J. Crawford, were elected delegates from the local branch.

The election of officers resulted in the re-election of J. A. Grant as president and John Flood as first vice-president. H. L. McGowan was elected second vice-president, W. J. Crawford honorary secretary, and C. S. Christie honorary treasurer.

The board of directors, which is composed of the officers and one representative from each trade, was elected with the following members of the different trades: S. C. Webb, electrician; F. E. Wetmore, carpenter; H. O. Clark, mason; D. J. Barrett, sheet metal worker; R. E. Fitzgerald, plumber; N. Nonnenian, tilers; J. H. Rullen, painter; J. P. Mooney, general contractors; G. H. Waring, mill, machine and iron workers.

There was a full attendance of members present. The objects of the association were enumerated by the president, who said that they were for the mutual benefit of the members and for the purpose of dealing fairly with the manufacturers, supply men, and with labor.

WESTERN ONTARIO NEWS.

Plans are being rushed and tenders will be called early in March for new main building and two science buildings for the Western University to cost \$1,000,000. Prices wanted on steam heating equipment, plumbing and electrical work. Tenders will be received by Prof. Sherwood Fox, Western University, London.

* * *

In the recent elections at Petrolia, Ont., Joe Landon, plumber for Pollard Bros., was elected as alderman. This is the second time he has been honored by a seat in the council.

* * *

R. H. Waite, plumber, Dutton, Ont., has just moved to new and larger premises north of the Patron block.

* * *

Plans are being prepared and tenders will be called for shortly for a \$50,000 addition to the Sheldon Hotel at Blenheim, Ont. A number of new bathrooms will be installed and additions made to the heating system. W. Allor, the proprietor, wants prices immediately on equipment.

* * *

Elmond Ryall, Olinda, Ont., is preparing plans for new residence to cost \$8,000 and wants prices on heating and plumbing equipment.

* * *

William Tapping is preparing plans for new \$7,000 residence at Ruthven, Ont., and is interested immediately in prices of heating and plumbing.

* * *

Scott Bros. have opened a shop at Kingsville, Ont., and will handle plumbing and heating work.

* * *

Prices are wanted immediately for plumbing and heating in connection with new \$25,000 school to be erected at Kingsville, Ont. Robert Black is secretary of the board.

* * *

The school board at Dashwood, Ont., plans to completely remodel the heating system in the public school and wants prices. G. Koch, chairman.

* * *

John Douglas, of Avonbank, Ont., is preparing plans for a new \$5,000 residence and is interested immediately in prices of plumbing and heating.

* * *

Indications point to the largest building year on record at London, Ont. Men in the trade have been busy throughout the winter and it is an impossibility to secure experienced workmen. Among the work to be commenced immediately is the Sick Children's Hospital, costing \$250,000; Home for Incurables, costing \$200,000; three large buildings for the Western University, cost \$700,000; a \$30,000 children's shelter; three new factory buildings for the Service Motor Truck Co. in Chelsea Green to cost \$250,000; a \$200,000 addition to the factory

of Beatty Bros., and a \$100,000 factory for the London Concrete Machinery Co. Aside from the troubles created by shortage of skilled help master plumbers state that conditions are vastly improved in respect to obtaining materials. In addition to the work mentioned above the contract for the new million dollar hotel has been awarded to the Frid Construction Co. of Hamilton. Prices are being asked on plumbing and heating and also electrical work. Another good sized job likely to go ahead in the spring is a 24-suite apartment block for John Hayman & Sons.

* * *

Ex-Ald. John H. Saunders has again been elected chairman of the Board of Health at London, Ont.

* * *

John Eggett was not only re-elected again as a member of the Board of Education at the recent elections in London, Ont., but was at the reorganization meeting of the board appointed to the two most important committees, the Building Committee and the Industrial and Art Committee.

* * *

The Mack Furnace Co., of Detroit, has purchased the old plant of the Defiance Iron Works at Chatham, Ont., and will remodel it and build additions. Equipment will be installed for turning out fifty furnaces a day.

* * *

A. Skelly has been awarded the plumbing and heating in connection with the \$50,000 addition to the Home for Incurables at London, Ont.

* * *

The Wright Teale Co. has contract for plumbing and heating for new offices for the Elliott Marr Co., at London.

* * *

Tenders will be received February 1 for plumbing, heating and electrical work in connection with remodelling of the London Loan Building at London. Architect W. G. Murray will receive them.

* * *

Plans are being prepared and tenders will be called early in March for a new \$40,000 hydro-electrical building at London, Ont. Prices wanted on heating and plumbing. E. V. Buchanan, general manager.

* * *

W. G. Murray, Dominion Savings Building, London, will receive tenders about February 1 for new heating system for the public school at Glencoe.

* * *

Loretteville, Que.—Municipal Council of Loretteville has asked the Dominion Government to build a large postoffice building to replace the old one.

ASK SPECIAL TARIFF FOR GALVANIZED IRON AND STEEL SHEETS FOR CULVERTS

Ottawa.—R. W. Gladstone, on behalf of the Canadian Iron Ingot Co., which has factories at Guelph and three other

places and makes galvanized corrugated pipe used for culverts on roads, appeared before the Tariff Commission and presented a case on the special galvanized sheets which are his firm's raw material, but are not manufactured in Canada, there is a duty today of 12½ per cent. under an old and unsatisfactory classification. Materials used for gas and water pipes in the city pay only 5 per cent. duty, and here material used for the benefit of the rural communities has to bear a levy of 12½ per cent. To abolish this unjust discrimination, Mr. Gladstone urged that a new specific tariff item should be created for "heavy galvanized iron or steel sheets for culverts used for building public roads." The commission promised all consideration to his request.

BIG BUILDING RUSH IN LONDON

London, Ont.—The greatest rush of building that has ever been known will mark the opening of spring in London. In addition to a large number of the better class of residences tenders will be called shortly for larger work, including a new \$650,000 collegiate; Sick Children's Hospital, to cost \$250,000; factory for the Rawleigh Products Co., \$200,000 addition to Bethseda Hospital \$85,000; new east end Salvation Army hall, \$25,000; new Children's Shelter in South London, \$25,000; addition to factory of the London Concrete Machinery Co., \$25,000, and a new \$50,000 church for the Christian Church congregation. Tenders will be called in March for three new buildings for the Western University, to cost \$1,000,000. The contract has just been awarded to the Frid Construction Co., Hamilton, for the new million dollar hotel and the old buildings on the site are being wrecked. John Hayman & Sons have plans for a new block of apartments to cost \$75,000.

WOULD ELIMINATE STRIKES

Ottawa.—Plans to eliminate strikes and labor disputes in various branches of industry in Canada will be placed before a general meeting of the association of Canadian building and construction industries which has been called for Winnipeg on January 19, 20 and 21. For some time the members of the executive of the association have been engaged in preparing a plan to have wages in the industry standardized by sections through the Dominion. They have also been at work on a standard contract form to be used by all contractors and sub-contractors in undertaking any building work. By the use of standardized wage agreements and building contracts they hope to save the contractors and workmen thousands of dollars by settling all difficulties that may arise without a cessation of work, which usually comes when the building season is at its height. The session of the association is generally regarded as one of the most important industrial meetings to be held in Canada this year.

2,000 Toronto Homes Lack of Ample Space

And 75% of the six and eight room houses of this city are occupied by two or more families.

These are existing conditions as reported by the City of Toronto Board of Health.

The congestion may be even more appreciated when attention is directed to the fact that the vast majority of these six and eight room homes are supplied with bathroom equipment suitable for a single family only.

k Sanitary Conveniences Kind

These facts illustrate needs that may be supplied with bathroom equipment among the six and eight room homes of Toronto, without taking into consideration other requirements within the city.

Conditions in other Canadian cities and towns, without doubt, offer opportunities equally great, as Toronto is probably as up-to-date and as well supplied with bathroom equipment as other cities and towns in the Dominion.

It is plainly evident that there are vast opportunities for business to be had by Sanitary Engineers throughout the country, which can be secured if all members of the trade take steps to awaken the Public to the urgent existing needs and reach out for the business.

Tenders, Contracts Awarded, Construction, etc.

PLUMBING CONTRACTS AWARDED

Ottawa.—Plumbing and heating contracts for six residences costing \$24,000 for Barrett Bros., 260 St. Catharines St., are awarded to J. R. Cameron, 488 Lewis St., and D. Rankin, 291 Sunnyside Ave., respectively.

Halifax.—H. G. Hagen & Co., Hollis St., have contract for heating for Isolation Hospital for Board of Health, City Hall.

Edmonton, Alta.—Reed & Turnbull, 10121 98th St., have contract for installation of plumbing fixtures in Rutherford School, for Edmonton School Board.

Brantford, Ont.—Additional contracts for church for St. Matthew's Lutheran Church are: Heating, Geo. A. Elliott, Jr., 193 Colborne St.; plumbing, R. S. Hope, 217 Terrace Hill St.

Toronto.—George P. Quigley, 12 Elizabeth St., awarded plumbing and heating contracts for three residences for R. English.

Toronto, Ont.—Heating contract for residence costing \$16,000 on Benlamond Ave., for A. Fisher, Church and Lombard Sts., is awarded to Pease Foundry Co., Ltd., 118 King St. East.

Toronto, Ont.—R. T. Hearn & Co., 1369 Queen St. W., have heating and plumbing contracts for duplex residence costing \$19,000 for Mrs. O. Taylor, care of H. R. Watson, architect, 907 Excelsior Life Bldg.

Windsor, Ont.—S. Keyser, 753 Gladstone Ave., is erecting a residence on Hall Ave., and awarded plumbing and heating contracts to Windsor Hardware Co., 518 Pitt St. W.

Winnipeg, Man.—Plumbing, heating and ventilating contracts for Deaf and Dumb Institute, costing \$621,000 for Prov. Gov't., Dept. Pub. Works, are placed with Mowyer Boag, Ltd., Portage Ave. E.

Montreal, Que.—Plumbing and heating contracts for duplex residence costing \$16,000 for R. A. Outhet, 264 Beaver Hall Hill, are awarded to W. H. Bradford & Co., 31 Westminster Ave.

Mimico, Ont.—Plumbing, heating and electrical contracts for residences for J. Ford, Burlington Rd., are awarded to J. H. Doughty, Queens Ave.

Port Dalhousie, Ont.—A. H. Jones, Main St., has plumbing and heating contracts for residence for Malcolm Link.

St. Catharines, Ont.—W. W. Park, 49 Queen St., is building a store for Grand Central Hotel to be occupied by Miss Glass, milliner, 324 St. Paul St. Plumbing and painting contracts are awarded to J. Peart, 36 Queen St., and Begg & Son, James St.

Peterboro, Ont.—Additional contracts for theatre costing \$150,000 for Paramount Peterboro Theatres, Ltd., are: Plumbing and heating, A. W. Welch & Son, 304 Queen St. W., Toronto.

Toronto, Ont.—Plumbing contract for store and apartment, costing \$15,000, for J. Clarke & Son, 258 Main St., is awarded to A. A. Legge, 130 Barrington Ave.

WATERWORKS, SEWERAGE, ETC.

St. Thomas, Ont.—By-law authorizing construction of dam across Kettle Creek, formation of storage basin, sinking of additional wells, changing electric pumps and repairing wall of clear water basin at estimated cost of \$233,000, will be submitted to ratepayers in January. W. B. Doherty, clerk.

Thorold, Ont.—Construction of a sewer in one street is planned by Town Council. D. J. C. Munro, clerk, Thorold.

WILL BUY INSTALLATIONS

Moose Jaw, Sask.—E. J. Heath, Chestnut Ave., a director of Arena Rink Co., will buy lavatories, urinals, wash basins and toilet accessories required for rink, costing \$50,000.

CONSTRUCTION AND RENOVATION

Alliance, Alta.—New tenders for erection of school costing \$25,000 for Alliance S. D. No. 3376, will be called in spring. Wm. McNeill, secy.-treas.

Craik, Sask.—Tenders will probably be called shortly for rebuilding school, which was recently destroyed by fire, at cost of \$75,000. C. M. Trueman, secy.-treas.

Harding, Man.—By-law will be submitted early in February authorizing the erection of a school for Harding Consolidated S. D. E. D. Tuttler, architect, 405 McArthur Bldg., Winnipeg.

Mimico, Ont.—By-law will be submitted to ratepayers on January 31st for approval to issue debentures for erec-

tion of school. M. Holdenby, Chrm. School Bd.

Montreal, Que.—R. C. School Cmsm. will apply to the Legislature of the Province of Quebec at its next session for authorization to borrow \$700,000 for the purchase of land and construction of new schools.

Muenster, Sask.—Construction work on college costing \$150,000 for St. Peter's Catholic College will be started early next spring.

Ottawa, Ont.—Work on erection of theatre costing \$350,000 for Famous Players Canadian Corp., Temple Bldg., Toronto, is held up until spring.

Pollockville, Alta.—Village and County Councils are building a town hall on Center St.

Richmond, B. C.—Two by-laws will be submitted to ratepayers in January, one for \$25,000 for erection of high school at Richmond and another for \$10,000 for four-room addition to school at Steveston.

St. Hyacinthe, Que.—Work on erection of technical school costing \$100,000 for Technical School Bldg. will be commenced early in the spring. G. Gene Richer, architect, 240 Girouard St., is preparing plans.

St. Vital, Man.—By-law authorizing erection of school costing \$50,000 for Woodlawn, S. D., St. Vital, will be submitted on January 19th.

Tillsonburg, Ont.—Public School Bd. contemplates erecting an addition to present public school or a new ward school. A. E. Raynes, secretary.

Vilna, Alta.—Tenders for erection of school for Sunny Knole S. D. No. 3914 will be called in February.

Kilgard, B. C.—F. B. Rogers, Vancouver, B. C., is awarded general contract for erection of a school for Prov. Gov't. Pub. Works, Victoria.

Toronto, Ont.—H. R. Watson, architect 907 Excelsior Life Bldg., is preparing plans for a residence to cost \$20,000 for Mr. Wilgar. Tenders will be called about February 1st.

Toronto.—S. King, 1502 King St. W., will build an addition to apartment house at cost of \$5,000.

Carmel, Sask.—Rev. Father Marscelus, O.S.B., Carmel, will call tenders about April 1st, 1921, for erection of church costing \$35,000 for R. C. Congregation.

(Continued on page 28)

The "Buyers' Strike"

A Term Which Sanitary Engineers Should Refrain From Using—Public Not Organized for any Such "Strike"—Best Way to Resume is to Resume—Keep Watch on Replacement Values.

THERE has been considerable publicity given through daily papers to what has been termed a "buyers' strike." This action on the part of the general public has cut very seriously into the wholesale and retail merchants' business and has put many of them in rather a precarious financial position.

Many merchants have protested loudly both in the press and by personal conversation with their customers against this action on the part of the public. They have pointed out that if the public persist in this buyers' strike, that it will throw many people out of work and thus act as a boomerang to the people who instituted the movement. This argument would be effective if the public were organized and would definitely agree to follow a policy suggested by the merchants. They are not organized, however, and each individual is acting more or less in his own selfish interests. Merchants should recognize this fact.

Nothing Succeeds Like Success

The best way to resume is to resume. Wholesale and retail merchants and manufacturers should forbid every member of their staff to mention such words as "Buyers' Strike." They should give the impression in interviews, in their advertising and in their general conversation that business is O.K. Remember nothing succeeds like success. They should keep their customers well informed with regard to the trend of prices. They may advise them to purchase some lines, and they may even advise them to hold off purchasing other lines. The one thing they should not do is to complain about the attitude of the general public. This merely advertises the buyers' strike movement and tends to extend it.

Keep Close to Bankers

Merchants should keep close to their bankers. They should make all the economies they can and put themselves in a solid financial position, but above all, they should adopt an energetic policy with regard to getting business. Let them put on special sales if necessary, but do not announce that these sales are being put on because the public refuse to buy. Sales can be put on because they need ready cash, or for some other good rea-

son. The merchant must keep his eye on replacement values.

If manufacturers, wholesalers and retailers adopt this policy it will do more than anything else to stimulate business.

The policy as outlined herewith under the heading "Carry On" is one which was advocated in Hardware and Metal immediately after the armistice was signed. Merchants will do well to follow the same policy in view of conditions prevailing to-day.

Carry On

IF you were in a crowded theatre and one man after another arose and assured the audience that everything was all right and just to keep calm; if the actors stopped the play to make similar statements to the audience you would probably feel sure something was wrong and would get out as quickly as you could. Others would follow and very soon there would be a panic.

The same situation faces business men to-day.

The day after the armistice was signed many wholesalers and manufacturers and their travellers began to protest loudly that everything was all right, that prices would not decline, and urged retailers to stock up. We have been importuned from all sides to join the chorus and through our publications to establish confidence in the trade.

We also believe retailers should carry on and buy for their requirements, but it is the business of manufacturers and wholesalers not to be protesting that everything is all right, but to carry on in the ordinary business way. If they want retailers to buy goods, then in the name of common sense let them tell the retailers through the publications they read and have confidence in what they have to sell. If they never advertised before let them take space and in a quiet, business-like way tell the trade what they have to sell. If they do not do this the natural assumption on the part of the trade will be that they have nothing to offer, that they too are panic-stricken and have decided to economize and mark time till better conditions return.

Can you blame retailers for following the example of wholesalers and manufacturers?

We are interviewing hundreds of retailers every week in all parts of Canada and our advice is:

Don't stop the play. Carry on.

Take space in the publications your customers read and tell them what you have to sell in a simple, straightforward, business-like way.

The 1907 panic was caused entirely by lack of confidence.

It is worth millions to Canadian business men to establish confidence. You can do your part at small cost.

COMBINATION HEATING SYSTEMS

Continued from page 18

as the design of the heating surfaces in some cases permits of a lower ratio than this.

When the heating surfaces are arranged so that the air currents are split up into small streams the heating effect will be greater than where the air passes over very hot surfaces and in large volumes.

A warm air furnace should be constructed so that the smoke passages will offer little obstruction to the flow of the gases.

Grate Surface

It is usually the custom of the makers to rate their furnaces according to the number of cubic feet of air that the furnace will heat.

An engineer of experience can be guided by the manufacturer's rating; because such an engineer will use the factor of experience when choosing a furnace. Nevertheless, when unusual conditions arise, such as that where ventilation is a consideration, the engineer must have recourse to a safer basis for his estimate than that of a rating based on cubic capacity.

The rule that we are now giving will fit any set of conditions. It is a rule that may be easily transposed into a few figures when its principle is once understood. This rule is based on the grate surface required to burn the necessary amount of coal.

For ordinary conditions we may assume that the coal consumption will be three pounds per square foot of grate surface in one hour, and that the heating efficiency of the furnace will be about 70 per cent.

The term heating efficiency indicates what proportion of the heating value of the coal is used in heating the building.

When using this method of rating a furnace, everything that has a bearing on the heat loss must be considered and reduced to the terms of equivalent glass surface (E.G.S.).

In the actual figuring of grate areas required, the engineer will find, after a time, that it is unnecessary to go through as many figures as are herein given. He will find a number of short cuts whereby he may reach the same results as those of this system.

To use this rule:—

First: Reduce the cubic feet of air to be heated to E.G.S.

Second: Reduce the exposed wall surface to E.G.S.

Third: Add the E.G.S. of the air and wall to the actual glass surfaces of the windows and doors. Then multiply this sum by the temperature range. This will give the heat loss per hour in terms of B.t.u.

Fourth: Divide the heat loss by the factor of 204. This will give the required grate area in square inches.

The factor of 204 is based on anthracite coal with a heating value of 14,000 B.t.u. per pound; a heating efficiency of

70 per cent., and a coal consumption of three pounds per square foot of grate in one-hour's time.

Now, we shall take as an example of the uses of this method in figuring the grate area of the furnace required for a small residence.

A list of the rooms of this residence are given below, with their cubes; wall and glass surfaces, and exposures.

Living room:—

Cube: 1,359 feet.

Wall: 225 square feet.

Glass: 55 square feet.

Exposure: S.W.

Hall:—

Cube: 693 feet.

Wall: 162 feet.

Glass: 27 feet.

Exposure: S.E.

Dining room:—

Cube: 1,431 feet.

Wall: 225 feet.

Glass: 38 feet.

Exposure: N.W.

Kitchen:—

Cube: 1,107 feet.

Wall: 126 feet.

Glass: 41 feet.

To be continued.

**TENDERS, CONTRACTS, ETC.,
AWARDED**

Continued from page 26

Portage la Prairie, Man.—Wyatt & Ireland, Merchants Bank Bldg., Winnipeg, have general contract for erection of warehouse costing \$6,000 for Prov. Gov't., Dept. of Pub. Works, Winnipeg. General contractors will buy all materials and will sub-let trades.

* * *

Blenheim, Ont.—Tenders will be called early in March for erection of addition to hotel and alterations and improvements, to cost \$50,000 for W. Allor, Sheldon Hotel.

* * *

Kitchener, Ont.—W. H. E. Schmalz, 288 Frederick St., is preparing plans for alterations to bank to cost \$30,000 for Royal Bank of Canada.

* * *

Kitchener.—New tenders for service station costing \$15,000 for Reinhart & Doerr, 192 King St. W., will be called early in the spring. It is expected that work will be started about April 1st. W. H. E. Schmalz, architect, 288 Frederick Street.

USING PREMISES REPORT CARD

Continued from page 14

Repairing lavatory faucets—enclose pamphlet 7-12-36.

Repairing bath tub faucets—enclose circulars 3-15-36-105.

In this chart, every kind of a repair possible is listed and the numbers of the circulars to be sent with the bill are indicated. As an example, in the case of repairing a sink faucet, circular six, which is sent with the bill, is a pamphlet showing a full line of one-piece sinks; circular eighteen is a circular dealing

with combination cocks for kitchen sinks, circular twenty-five is a booklet showing rubber mats for drain-boards, towel bars, soap dishes, pipe cleaning compounds, preparations for cleaning enamel, force pumps, filters and other appliances that can be used around the kitchen sink.

In his letter, he states that accurate tabulation of the results accomplished shows that his plan has developed more profit in the six months he has had it in operation than he could possibly make from four or five large contracts. As can be seen, the system is easy to install, consumes but a very small amount of time, and should be adopted by every contractor who is desirous of expanding his business.

**SALES LETTERS BUILD PLUMBING
BUSINESS**

Continued from page 21

smaller business man. By it, he has the satisfaction of being able to absolutely control his expenditure and base the amount so spent upon the actual possibilities in view for business. In the case of such a sized business the cost of newspaper advertising, or any other form of general publicity, might easily represent entirely too much expense for the business to carry. Under such circumstances it might be very easy for the contractor to badly "overbuy" himself in the matter of expense for advertising, etc.

Another very distinct advantage of circular sales letters, sent out in limited numbers, according to the ideas of this article, is found in the fact that it is a hundred to one shot that the Government, acting as your messenger, will deliver your message directly to the exact party you want it to reach. As a result, if you have picked the party's name with judgment, you have a greatly improved chance of getting back highly profitable return on the investment of, at the most, ten cents, which would be represented by your expense for the individual letter written in your own office; or say fifty cents at the most if some outside typist write it for you.

So, if you happen to have no more than two or three people in your mind who would be prospects for business for any sort, don't let that keep you from making use of such circular sales letter suggestions as are shown herewith, as well as the other material of the same sort that you doubtless receive from time to time through the Advertising Departments of various manufacturers, and the trade press.

Letter Gets In

A two cent stamp will get inside of many a door that would be kept locked to you if you called in person. A nicely typewritten, personal, friendly, intelligent sales letter will often come closer to securing interested attention than you would yourself. If you ever really try this out you will find that it is all true; and that it surely does pay.

NEW CANADIAN PATENTS

(Issued for Plumbing and Heating Goods)

NO. 204,745. FAUCET FILTER

Frank P. Williams, Detroit, Mich., U.S.A.

An attachment for faucets, comprising a barrel, means on one end to filter the water, and means on the opposite end constituting a bubbling fountain.

An attachment for faucets, comprising a barrel provided

with means for clamping the same to a faucet in substantially water-tight relation, means for closing the lower end of the faucet, and a bubbling fountain device in the upper end of the faucet operative when the lower end of the barrel is closed off.

An attachment for faucets, comprising a pair of cylinders adapted to be telescoped together and clamped to a faucet elbow to form a barrel, each cylinder having a closed end except for water opening therethrough, a filter cup abutting against the lower cylinder end, a cap with a flange deeper than the filter cap adapted to fit over the filter cup and a portion of the end of the barrel, said filter cup having an opening therethrough and the said cap having an opening therethrough, the opening through the filter cup being adapted to be brought into registry or out of registry with the opening through the adjacent end of the cylinder for the purpose of cutting down the water passage through the filter and thereby causing the water to bubble through the opening in the end of the top cylinder.

NO. 205,502. STEAM GENERATING SYSTEM.

Lewis Lawrence Scott, St. Louis, Missouri, U. S. A.

In an apparatus for generating steam, a steam generator, means for supplying liquid to the generator, means for supplying fuel mixture for heating the generator, an electrical device for igniting the fuel, means for initiating the functions of the liquid and fuel supply means, and the device for igniting the fuel mixture from a single source of control.

In an apparatus for generating steam, a steam generator, an electrically controlled device for supplying liquid to

the generator, an electrically controlled device for supplying the fuel for heating the generator, an electrical device for igniting said fuel, and means governed by generator conditions for automatically and simultaneously opening and closing the electric circuit to said igniting device, the device controlling the supply of liquid to the generator and the device controlling the supply of fuel for heating the generator.

In an apparatus for generating steam, a steam generator, an electrically controlled device for supplying liquid to the generator, an electrically controlled device for supplying fuel for heating the generator, an electrical device for ignit-

ing said fuel, means governed by generator conditions for automatically controlling the operation of the three devices named, and independent means also governed by generator conditions for automatically varying the relation between the supplies of liquid and fuel.

NO. 205,373. RADIATOR

Maurice Goudard and Marcel Meunesson, co-inventors, both of Neuilly s/ Seine, France.

A radiator for internal combustion engines comprising a number of elements made of recessed or embossed metal plate having at their upper and lower portions distance rings forming supply channels, such elements being clamped together by means of bolts located in the axis of the said rings, the construction being characterized by the fact that the said radiator consists of two groups of the said elements located on each side of a supply conduit fed from a principal cistern forming a reservoir and communicating by means of upper channels or passages with the said supply conduit, the groups of elements being united by lower channels or passages to another conduit fitted with an outlet tube.

A radiator for internal combustion engines such as that claimed in claim 1 characterized by the fact that the upper and lower clamping bolts engage at their extremities in fixed cheeks at the ends of the reservoir so that all the strain is supported by the said cheeks.

A radiator for internal combustion engines such as that claimed in claim 1 characterized by the fact that different elements are so constructed as to fit into one another in the neighborhood of the distance rings so that they are well centred, the elements being formed non-symmetrical for that purpose.

No. 206,436. HOT AIR HEATING SYSTEM.

William G. Felton, Wakeman, Ohio, U.S.A.

In a hot air heating system, the combination of a furnace, a primary jacket fitting about said furnace and being spaced therefrom, said primary jacket having openings formed

(Continued on page 36)

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

SEVERAL reductions have been made in plumbing and steam fitting goods since the beginning of the month, and the tendency seems to be towards lower levels on many standard lines. New discounts quoted on radiators and steam boilers show a reduction in price, and new lower prices are issued on range boilers. Soil pipe and fittings have been reduced in price, and malleable pipe fittings show lower quotations. Corrugated sheets are marked down and new lower lists are in preparation for eave trough. Other goods

showing reductions are: lead pipe and waste pipe, valves, soldering coppers, sheet copper and brass, rivets and burrs, stove bolts, etc. Wrought pipe is holding unchanged, and though deliveries are improved there are only small stocks of the smaller galvanized sizes on hand. Enamelware is quieter and prices are unchanged, with little indication of any revision. This is always regarded as a quiet time of the year, but many report fairly good business for the season, due probably to the exceptionally mild weather.

MONTREAL MARKETS

MONTREAL, Jan. 13.—Many lines of plumbing supplies show reductions this week, the chief among them being soil pipe and fittings and range boilers. Soil pipe is about 10 per cent. lower in price and fittings 20 per cent. Range boilers are reduced on all "standard" sizes. The "extra heavy," only being stocked in the two smaller sizes, also show decline. Radiators and boilers are now being sold at a new lower discount. Pipe deliveries have improved very much in the last two weeks and some warehouses now have all sizes in stock; the scarcity of smaller sizes will, in the opinion of dealers, be well overcome by spring. Although a reduction in the price of closets and enamelware is expected, local prices are still remaining firm. Business continues quiet in practically all lines, but this is experienced every season at this period.

Deliveries of Pipe Improving

MONTREAL. PIPE.—The scarcity which has existed in pipe for some time is improving a great deal, and in the opinion of local manufacturers will continue to do so. Deliveries are now being made on the smaller sizes of galvanized piping, the scarcity being felt more particularly on these. With the winter months ahead, when the demand is not so heavy, it is felt that both manufacturers and jobbers will have a stock on hand and prices will have a tendency to lower a little.

LIST NO. 46 Standard Butt Weld Pipe Per 100 Ft.

Sheets and Plates

Are Dull

MONTREAL.

SHEETS AND PLATES.—The demand for sheets and plates is exceedingly small just now, but this is experienced each year at this season. Stocks are very light and a scarcity is noted in some weights.

NOTE.—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Tin Plate Is In Good Demand

MONTREAL.

TIN PLATE is in good demand at present, due no doubt to the fact that the sap bucket season is drawing nearer. Although some sizes and weights show a scarcity, the size used in the making of above articles is well stocked.

Quotations are as follows: 20 x 28 x 112 coke, \$25.50 case; 20 x 28 x 56 charcoal, \$13.60 case.

Cor. Sheets Unchanged With Small Demand

MONTREAL.

CORRUGATED SHEETS.—There is nothing new to report on corrugated sheets. Prices remain unchanged and demand is light.

Range Boilers

Show Decline

Montreal.
RANGE BOILERS.—A reduction ranging from \$2.00 on the 30 gallon standard range boiler to \$10.00 on the 120 gallon is in effect this week. The least reduction is shown on the 52 gallon boiler, where there is only a decline of \$1.00.

The only two sizes stocked at present in the "extra heavy" boilers are the 30 and 35 gallons. These are reduced \$3.00 and \$2.00 respectively.

New quotations are:

RANGE BOILERS—	Standard	Ex. Heavy
30-gallon	13 00	15 00
35-gallon	15 00	19 00
40-gallon	17 00

Black diamond cast steel, per lb.	0 24½
Common bar iron	4 55
Refined iron, per 100 lbs.	6 05
Mild steel	4 55
3-16 and thinner flats in iron or steel take extra 50c per 100 lbs. over base and regular extra.	
Band steel in scroll bdles., 50c per 100 lbs. extra.	

Radiators and Boilers

Reduced in Price

Montreal.
RADIATORS AND BOILERS.—Following the withdrawal of all prices to the trade previous to January 1st, manufacturers have issued new discounts off the list for all lines of radiators and boilers. These new prices show reductions on all lines, and are due on the part of the manufacturers to realization that although raw materials have not declined, but rather advanced in some instances, a new selling price should be arrived at that will remain unchanged during the coming year.

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
Discount 40% for hot water and 41% for steam.
Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 39%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 50 off list.

Square or sectional hot water or steam boilers, 15-in., list price.

For Ontario Government trimmings add 5 per cent. to list.

Square or sectional water boilers, 19-in to 36-in., 2½ per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., list price. Ontario Government trimmings, add 5 per cent.

Square or sectional water or steam boilers, 48-in., list prices. Ontario Government trimmings, add 5 per cent.

Round steam boilers, standard trimmings, 5 per cent. off. Ontario Government trimmings, list price.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Lead Pipe and Waste

Show Slight Reduction

Montreal.
LEAD PRODUCTS.—A reduction of \$1.00 per 100 pounds is noted this week on both lead pipe and lead waste. Other lines remain unchanged, although zinc sheets also show a decline of one cent per pound.

Quotations are as follows:

Lead pipe, per 100 lbs.	13 50
Lead waste, per 100 lbs.	14 50
Note—Lead pipe is subject to a discount of 10%.

Firmer Tone Noticeable On Waste Materials

Montreal.

SCRAP MATERIALS.—A few changes are noted this week on scrap metals. Wrought iron shows a decline of \$5.00 a ton, and stove plate is reduced \$4.00 per ton. A slight reduction is also noted on scrap zinc. The market is reported quiet, but a firmer tone noticeable.

Dealer's Buying Prices

Ingot Metals Continue Firm, Improvement Noted

Montreal.

INGOT METALS.—An improvement is noted this week in metals. Prices continue firm and the sterling exchange is being regarded with much interest as this has quite an effect on all metals. The exchange has advanced considerably during the last few days.

TIN.—This metal is still holding steady in London. The advance in sterling exchange has had a strengthening effect on it. A steady market is looked for and local quotations are 44 cents.

COPPER.—Copper is decidedly firmer in New York, and with production still being curtailed, the situation is improving. The local price on electro is 19½ cents and on casting 19 cents.

LEAD is showing slightly firmer without much marked strength. The market will, no doubt, be irregular for a while. Local price is unchanged at 7½ cents.

SPELTER.—The London market on spelter is strong, although in the U. S. it is practically lifeless. The price should improve in time, but there is no immediate sign at present. Quotation 8¼ cents.

ANTIMONY.—This metal is stronger in New York where there is some talk of a duty being imposed on Chinese and Japanese imports. Local price is 8½ cents.

ALUMINUM.—There is nothing new to report on aluminum. Local price continues at 35 cents per pound.

TORONTO MARKETS

TORONTO, Jan. 13.—Many important price changes have been made on plumbing and steam-fitting goods during the past two weeks. Range boilers have been reduced and all sizes but one are lower. New discounts on radiators and water boilers show a decline in prices. Soil pipe and soil fittings are quoted at lower levels. Pipe fittings, both malleable and cast, have been revised in price and are lower. Corrugated galvanized sheets have been reduced and lower quotations are being made on eavetrough. Some of these declines have been forecast in Sanitary Engineer in previous issues. Other lines showing lower quotations are lead pipe and lead waste, sheet copper and brass, valves, soldering coppers, rivets and burrs, and white lead in oil. Wrought pipe is holding unchanged and bar iron and steel, sheets and plates are holding at recent declines. Closets and enameledware are unchanged, but are quiet. Business generally, though quiet, is reported by many to be up to the average for the time of the year.

New Lower Prices on Radiators

Toronto.

RADIATORS.—Changes have been made on radiator prices and the discount on the standard radiator is now 40 per cent. for hot water and 41 per cent. for steam. Wall radiators have also been changed to 39 per cent. Business is on the light side on these goods. The new quotations are the following:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 40% for hot water and 41% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 39%

Hot Water Boilers Are Reduced

Toronto.

HOT WATER BOILERS.—New discounts are quoted on King and Royai round hot water boilers and are a reduction. The present quotations are 50 per cent. off list instead of 40 per cent.

Tank heaters numbers 0 and 10 are now 50 per cent off; Nos. 12, 112, 15, 115, at 47½ per cent., and No. 1 laundry 50 per cent.

Stoves and Furnaces Move More Slowly

Toronto.

STOVES AND FURNACES.—The supply of stoves has practically caught up with the demand now, and little is heard of shortages in these lines at the present time. Sales are light and the fact that dealers are usually keeping their stocks at a minimum and replacing goods as they are sold is responsible for smaller orders being received more frequently than used to be the case. Quotations on furnaces, heaters and ranges are holding firmly and little indication is given of any approaching change.

New Lower Prices on Range Boilers

Toronto.

RANGE BOILERS.—As foreshadowed in last issue, range boilers are now lower in price. The new quotations constitute a reduction of from 5 to 17 per cent., the declines being largest on the smaller sizes. The extra heavy boilers are also lower with the exception of the 82 gallon size, which is now \$50 instead of \$48. Sales are reported to be smaller now, but a steady movement is still noticed. Following are the new prices:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	\$13 00	\$15 00
35 gallon	15 00	17 00
40 gallon	17 00	19 00
52 gallon	24 00	28 00
66 gallon	32 00	38 00
82 gallon	40 00	50 00
100 gallon	50 00	60 00
120 gallon	60 00	70 00

Bar Iron and Steel Are Quieter

Toronto.

BAR IRON AND STEEL.—There is very little new in bar iron and steel and business is reported to be quiet. Mills are reported to have been shipping out supplies and little is being consumed now, so that stocks should be accumulating. No price changes are recorded and quotations are as follows:

IRON AND STEEL

Common bar steel, 3-16 in. and lighter....	\$ 5 50
Common bar iron, 3-16 in. and lighter....	5 50
Common bar iron, ¼-in. and heavier	4 75
Angle base	6 00
Horseshoe iron	6 00
Tire steel	5 95
Band steel	5 50
Spring steel	12 75
Mining drill steel	28 00
Common cast tool steel	20 00
Sleigh shoe steel	6 00
Norway iron	15 00
Toe caulk iron	6 70
Hoop steel	7 50

Soil Pipe Quotations Are Lower

Toronto.

SOIL PIPE.—A reduction has been made since the last market report on soil pipe. This was forecast in the last issue of Sanitary Engineer. The de-

clines range from 20 to 25 per cent, according to size. Medium and extra heavy pipe in 2 and 3 inch is now quoted at 10 per cent. off list instead of plus 10; 5 and 6 inch pipe is now 15 per cent. off list; 4 inch, 20 per cent. off, and 8 inch 5 per cent. off list. The declines are due to lower pig iron prices and cheaper markets. Reductions have been made in soil pipe fittings also, and the new quotations are, 2 to 6 inch, 40 per cent. off list; 8 inch, 5 per cent. Previously the discounts were plus 20 on the 8 inch and 20 per cent. off on the smaller sizes.

New quotations are as below.

SOIL PIPE (medium and extra heavy)—

2 and 3 inch, 10%.
4 inch, 20%.
5 and 6 inch, 15%.
8 inch, 5%.

FITTINGS—

2 to 6 inch fittings, 20% discount.

Conductor Elbows

Are Quiet

Toronto.

CONDUCTOR ELBOWS.—Prices are unchanged on these lines and present sales are light.

Following are quotations:

ROUND CORRUGATED OR CRIMPED ELBOWS	
2 inch, list	\$1 90
3 inch, list	2 20
4 inch, list	3 60
5 inch, list	9 00
6 inch, list	10 50

Add 50% to above list.

Revisions on

Eavetrough Prices

Toronto.

CONDUCTOR PIPE AND EAVES-TROUGH.—Reductions are being made on eavetrough and lower prices will shortly be in effect. The demand is rather light for these goods at the present time. Quotations are the following at the time of writing:

PIPE (Conductor)

2 in., in 10-ft. lengths, list	8 00
3 in., in 10-ft. lengths, list	9 70
4 in., in 10-ft. lengths, list	12 80
5 in., in 10-ft. lengths, list	17 50
6 in., in 10-ft. lengths, list	21 30

Add 25% to the above list.

TROUGH (Eave)

O. G., Square Bead and half round. Size in

Per 100 ft.	Per 100 ft.
8-in.....\$6 90	15-in.....\$12 50
10-in.....7 70	18-in.....16 00
12-in.....9 10	

Add 25% to the above list.

Cotton Waste

to be Lower

Toronto.

COTTON WASTE.—Changes are in progress in the price of cotton waste, but new lists will not be ready for a few days. It is stated that reductions of from 2 to 3 cents per pound are being made. A somewhat firmer tone is being displayed in the raw cotton markets.

Corrugated Sheets Show

Decline in Price

Toronto.

CORRUGATED SHEETS.—A reduction has been made in the price of galvanized corrugated sheets, and the decline amounts to about 7 per cent. on 26 and 28 gauges and about 15 per cent. on

other sizes. The 75 cents extra for lighter than 24 gauge and wider than 27 inches is omitted, and the following substituted: for one inch corrugation, 50 cents per square extra is charged. Sales are said to be light now on these lines. Following are the new quotations and they are subject to 7½ per cent. discount:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	10 50
No. 26 gauge	11 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00

Less 7½%.

For 1 inch corrugation add 50c per square extra.

Further Reductions on Lead and Waste Pipe

Toronto.

LEAD AND ZINC PRODUCTS.—Since the last issue of Sanitary Engineer a further decline has taken place in the price of lead pipe and lead waste of one cent per pound, list. Solders are holding at recent declines. Lead has shown the biggest decline of any metal during the past year, and compared with the high level prices reached last spring the present prices show a 50 per cent. drop. It is uncertain whether the bottom has been reached, but it is noted that this week has seen a little firmer tone shown on primary pig lead markets both in the States and in England and slightly higher quotations are made. Many are of the opinion that further declines in this metal are improbable. Present quotations are the following:

Lead pipe, list, per lb.	0 13½
Lead waste pipe, list, per lb.	0 14½
Do., over 8 in., list, per lb.	0 15½
Lead pipe is subject to discount of 10%.	
Lead traps and bends	Net
Lead sheets, 4 to 6 lbs. sq. ft., in rolls, lb.	0 10½
Cut sheets ½c to ¾c lb. extra and cut sheets to size 1c lb. extra.	
Solder, wire, lb.	0 36
Do., strictly, lb.	0 27
Do., commercial, lb.	0 25½
Do., guaranteed, lb.	0 29
Do., wiping, lb.	0 25
Zinc sheets, per lb.	0 18
Calking lead	0 16½

Sheets and Plates Hold;

Small Movement

Toronto.

SHEETS AND PLATES.—Trade is reported to be inactive in these lines at present. Prices are nominally unchanged, although for fair sized orders better quotations may possibly be secured. Some wholesalers are of the opinion that there may be further recessions in sheet prices before very long.

Reports from the Pittsburgh district indicate that there is but little activity in the sheet mills and state that it is probable that less than one-third of the independent mills are running at the present time. English markets are reported to be weaker in galvanized sheets with little export business being done just now.

Quotations here are the following:

BLACK SHEETS		
14 gauge	8 35	9 30
16 gauge	8 40	9 40
18-20 gauge	8 45	9 45
22-24 gauge	8 50	9 50
26 gauge	8 55	9 55

28 gauge	8 65	9 65
3-16 in. plate	6 50	7 00
¼-in. boiler plate	5 50	6 00

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

16	8 90 10 30	9 00 10 45
12 and 14	8 75 10 15	8 85 10 30

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Wrought Pipe

Shows No Change

Toronto.

PIPE.—No changes have been made in pipe prices and quotations are still made from list No. 46, which is attached. Sales are light at present, but there is a very fair demand for the period of the year. This is probably due to the fact that stocks have been low for some considerable time and also to the fact that the smaller sizes of galvanized pipe have been particularly scarce. Improvement is manifest in the deliveries of wrought pipe and there should be a more favorable turn to the market from now on. Prices of the independent mills have come down at last to the Industrial Board levels on American markets.

Present quotations are the following:

LIST NO. 46 Standard Butt Weld Pipe Per 100 Ft.

	Steel	Gen. Wrought Iron
	Blk.	Galv.

Lower Quotations

on Malleables

Toronto.

PIPE FITTINGS.—Changes have been made this week on fittings and malleables are reduced. Class B black are quoted at 24 cents and galvanized at 34 cents. The old quotations were 30 and 40. In class C fittings the new prices are 16 and 24 cents, in place of 20 and 30. Malleable and cast bushings are now 25 per cent. off list, a reduction of 9 per

cent., and union are quoted at 37½ per cent. off list, a decline of 11 per cent. Plugs are 22½ per cent. instead of 15 per cent. There is a fair demand for the season and stocks are now in better shape. Following are new quotations:

PIPE FITTINGS

Cast iron fittings	Net
Plugs	22½%
Bushings	25%
Unions, ¼" to 2"	37½%
Do., ½ in., 2½ to 4 in.	25%

Class B	0 24	0 34
Class C	0 16	0 24

Sales Light on

Enamelled Ware

Toronto.

ENAMELLED WARE.—Sales are light just now on enamelled ware, but some wholesalers state that they have been getting more business than they were expecting, and put it down to the exceptionally mild weather. Prices are holding firm and little change appears to be probable at present. Quotations are being made at 20 per cent. off following list except where net prices are stated:

Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	\$51 40
Bath tubs, 5½ ft.	57 10
All Steel Enamel Baths, 4, 4½ or 5 ft., net	\$16 25
Do., do., 5½ ft., net	17 50
Lavatories—

All above list except lines marked net. Discount 20% off these prices.

Closet Prices Held

at Recent Change

Toronto.

CLOSETS.—While business is quiet on these lines there is said to be a little more activity than usual in these goods. Stocks are reported to be about the average and no changes are announced. Prices are holding at declines noted in last issue, and are as follows:

Closet, standard outfit	\$32 00
Do., with post hinge seat	33 00
Do., white vitro, vitreous china or enamel-iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	12 00
Do., reversible trap bowl, less spud	13 25
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	17 50
Do., white vitro, vitreous china, or enamelled iron tank, with fittings, flush elbow and supplies, seat and cover	19 00
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25

Compression Goods Have Downward Tendency

Toronto.

COMPRESSION GOODS.—There is

said to be a moderately fair movement of these goods in the smaller sizes. Some lines of valves have been reduced in price lately, and it is expected that other revisions may take place shortly. Many look for a downward tendency on brass plumbing goods, and it is noted that large manufacturers of these lines in the States have reduced their prices from the beginning of the year. Following are quotations on some of the principal lines:

Compression work, standard	25%
Fuller work, standard	30%
Bath cocks, compression	25%
Do., Fuller	28-30%
Flatway stop and waste cocks, standard	25%
Roundaway stop and waste cocks, standard	25%
Brass steam cocks, standard	add 10%
Globe, angle and check valves, standard	add 5%

Basin Cocks	
No. 1 and 1. Fuller pattern	30%
Quick opening	28%
Lead pipe, list, per lb.	0 13½

Lower Levels on

Copper and Brass

Toronto.

COPPER AND BRASS.—Some changes have been made on brass and copper quotations and prices are shaded a little. Copper ingots are dealt with under ingot metals. Copper rods ½ inch to 2 inch are 37 cents per pound; soft sheets, plain, 16 oz. and heavier, 37 cents; polished and tinned ditto, 48 cents; tubing, 42 cents. Quotations on brass are: sheets, base, 32 cents pound; rods, base, ½ to 1 inch, round, 29 cents; tubing, seamless, b. se. 39 cents.

Soldering Coppers

Reduced in Price

Toronto.

SOLDERING COPPERS.—A decline of about 16 per cent. has been made in the price of soldering coppers, and the new base quotation is 52½ cents per pound.

New Discount on Iron

and Copper Rivets

Toronto.

RIVETS AND BURRS.—Reductions have been made on rivets and burrs, and the new discount on iron rivets and burrs is 37½ per cent. on black and tinned. The usual extras apply on small quantities. Copper rivets and burrs are now quoted at net list instead of plus 15 per cent. Copper burrs sold separately are unchanged at 50 per cent. advance.

Bolts and Nuts

Show Reduction

Toronto

BOLTS AND NUTS.—Reductions have been made in the prices of bolts and nuts, and the following are the new discounts on some of these lines. Stove bolts are now quoted at 57½ per cent. off list, in place of 47½ per cent. Lag screws are now 20 per cent. off list. Ma-

chine bolts ¾ inch diameter and smaller, 4 inch and shorter, 30 per cent. off list. Ditto ¾ inch diameter and longer than 4 inch, and 7-16 inch diameter and larger sizes, 5 per cent. off list. The new quotations on nuts are for 2 inch and smaller as follows: square, blank, add to list \$2; square, tapped, \$2.50; hexagon, blank, \$2.25; hexagon, tapped, \$2.75.

New Lower Prices on Penberthy Valves

Toronto.

PENBERTHY VALVES.—New and lower prices went into effect on January 1st on Penberthy valves, and constitute a reduction of approximately 15 per cent. New discounts are the following:

Gate valves, 15 per cent.; regrounding valves, 10 per cent.; swing check valves, 5 per cent.; compodisk valves, 10 per cent.

New Prices on Oils and Turps.

Toronto.

OIL AND TURPENTINE.—\$1.50 per gallon is asked for turpentine in 5 gallon lots, and \$1.25 for raw linseed oil; containers extra. In barrel lots prices are 15 cents per gallon less.

Dry Red Lead

Reported Easier

Toronto.

RED LEAD, DRY.—Present prices on genuine English dry red lead are \$14 per 100 pounds in kegs and 16 cents per pound in small quantities. This is a reduction from previous quotations.

White Lead in Oil

Reduced Again

Toronto.

WHITE LEAD IN OIL.—Reductions have been made again on white lead in oil and new prices are \$1.25 per cwt. under previous quotations. The standard pure is quoted at \$17.30 per 100 pounds in less than one ton lots.

Boiler Tubes Quiet

and Unchanged

Toronto.

BOILER TUBES.—Prices are holding unchanged on these goods and demand is seasonably light. Following are quotations:

BOILER TUBES—	Per 100 feet	
	Seam'less	Lapweld
1 inch	\$23 00	\$....
1½ inch	32 00
1½ inch	33 00
1½ inch	35 00
2 inch	35 00	30 00
2½ inch	38 00	32 00
2½ inch	45 00	36 00
3 inch	54 00	45 75
3½ inch	70 00	49 00
4 inch	96 00	63 00

Plumbers' Oakum

Holds Unchanged

Toronto

OAKUM.—No changes are reported on plumbers' oakum, and selling prices

MUELLER BIBBS

For beauty of design, precision in manufacture and quality of materials, **MUELLER** Bibbs are unequalled—whether the construction be Compression, Rapidac, Fuller or Self-Closing.

The anti-spreading device is an integral part of all **MUELLER** Bibbs. It breaks up the whirling motion of the water and delivers it from the spout in a smooth, solid stream.

There is a
MUELLER
Bibb for
every need—
and a need for

Machined Products.

are still \$4.75 per 50 pound bale, and 12 cents per pound for small quantities.

Waste Materials; Dull and Declining

Toronto.

WASTE MATERIALS.—The market is reported dull again this week and lack of interest is keeping the volume of business down. The easy situation in iron and steel industry is causing consumers of scrap to expect lower prices and quotations are more or less nominal. Non-ferrous scrap has been very dull. Prices are inclined to lower levels on account of poor demand. The following are average prices:

WASTE MATERIAL		
No. 2 busheling	13 00	
Stove plate, per ton	19 00	20 00
Scrap pipe	8 00	9 00
eYellow brass	6 00	7 00
Red brass	10 00	
No. 1 machinery cast	24 00	25 00
Heavy melting steel	15 00	16 00
Heavy copper	10 50	11 50
Light copper	8 00	9 00
Scrap zinc	4 00	4 50
Light brass	4 00	4 50
R.Rd. wrought iron, No. 1, per gr. ton	13 50	14 50
Heavy lead pipe	4 00	4 50
Old rubbers, boots and shoes	0 03	0 04
Overseas lumbermen's rubber boots	0 02	0 03
Bicycle tires	0 01	0 01½
Automobile tires	0 75	1 00
Tea lead	2 00	2 25

Ingot Metals Inactive; Tin Shows Firmness

Toronto.

INGOT METALS.—There is not much improvement in the demand for ingot metals, and it is not expected that there will be very much change before the end of the month. An advance of nearly nine cents in pound sterling exchange rates exercised a strong influence on different metals, and tin and copper were among those to be principally affected. Lead shows a considerably stronger tone in outside markets, but there is a reported shortage of supplies.

TIN.—A little firmer tone is noted in tin and the rise in sterling exchange is having its effect on the market. Business however is dull and stagnant. Quotations have advanced to 48 cents.

COPPER.—Unchanged, but a better feeling expresses this metal. In outside markets there is stated to be an improvement in demand and opinion in the trade is that the market had turned the corner. Quotations on casting copper are unchanged at 19 cents.

LEAD.—While a firmer tone is reported in outside markets, movement is slow and a scarcity of supplies is evident, especially in Eastern markets. Local prices are holding at \$7.

SPELTER.—This metal is dull and unchanged, but London reports show an up trend. Quotations are unchanged here at \$7.75.

ANTIMONY.—This is reported as dull and unchanged and quotations remain at 8 to 9 cents.

ALUMINUM.—American markets show a continued easiness in aluminum but very little buying. Prices are held here at 37 to 39 cents.

WINNIPEG MARKETS

WINNIPEG, Jan. 13.—The tendency is for lower prices on many plumbing lines, and it is expected that there will be a gradual lowering on many goods that have remained firm for some time. Steam boilers, hot water boilers and radiators have been marked down in price this week, also black and galvanized iron sheets. Iron and steel are also showing lower quotations. Pipe prices remain firm, but it is expected that there may be a recession on this before long. Business is still quiet but an improvement is looked for in a few weeks.

Iron and Steel

Prices Reduced

Winnipeg.

IRON AND STEEL.—The manufacturers have lowered prices on iron and steel to stimulate trade, but it is not expected that any great change will be noticed for a while as regards sales nor will the prices be altered to any great extent. Following are new quotations:

BAR IRON—Round and Square.		Base
3-16, ¼ and 5-16 inch		\$7 00
¾ to 2 inch		5 75
2 to 3 inch		6 50
3 to 6 inch		7 00
Flat iron, sizes up to 1 x 4 inch		5 75
Do., over 1 x 4 in., up to 6 in. wide		6 50
Black band steel		7 00
Sleigh Shoe Steel—soft and mild—		
Round and square—		Base
3-16, ¼ and 5-16 in.		7 00
¾ in. to 2 in.		5 25
2 in. to 3 in.		6 50
3 in. to 6 in.		7 00
Flat—		
Up to 1 in. x 4 in.		6 25
Over 1 in. x 4 in., and up to 6 in.		6 50

Black and Galvanized Sheets Lower in Price

Winnipeg.

SHEETS.—Black and galvanized sheets are quoted at lower prices this week and are as follows:

Black Sheets—10 gauge, \$8.80; 12 gauge, \$8.80; 14 gauge, \$8.85; 16 gauge, \$8.95; 18 gauge, \$9.45; 20 gauge, \$9.45; 22 gauge, \$9.50; 24 gauge, \$9.50; 26 gauge, \$9.55.
Galvanized Sheets.—16 gauge, \$10.60; 18 gauge, \$10.75; 20 gauge, \$10.75; 22 gauge, \$10.90; 24 gauge, \$10.90; 26 gauge, \$11.05; 28 gauge, \$11.65.

Lead Pipe and Waste Prices Reduced

Winnipeg.

LEAD PIPE.—Lead pipe and lead waste pipe have been reduced in price this week and are quoted at the following prices: Lead pipe, \$12.96 per 100 pounds; lead waste, \$13.86 per 100 pounds.

Dart Unions

Lower in Price

Winnipeg.

DART UNIONS.—The prices on Dart unions have been revised and are somewhat lower. Following are the latest quotations:

¾ to 2 inch, 15 per cent. off list.
¾, 2½ to 4 inch, 5 per cent. off list.

Steam and Hot Water Boilers Lowered in Price

Winnipeg.

STEAM AND HOT WATER BOILERS.—The prices on these lines were withdrawn last week and it was thought

that higher prices would be forthcoming, but this week has brought forward lower prices on boilers and radiators and they are approximately 5 per cent. lower.

WORK ON INFILTRATION

GALLERY PROGRESSES

Moose Jaw, Sask.—Excavation for the southern portion of the infiltration gallery at Britannia Park is continuing and the first fifty feet south of the present pumping well has been piled and excavated to the clay, piling of the next fifty feet is in progress and with continued favorable weather should be soon completed.

The mild weather, with the exception of the few days around Christmas, made it possible for the work to be continued with very little interruption. The past fall has been one of the most favorable for outside construction that contractors have experienced in several years and work has been continued in almost every line.

DESERONTO MAY GET BIG CONCERN

Deseronto.—During the past couple of weeks efforts have been made to interest local capital in the opening of a factory for the manufacture of wire goods, stamped metal goods, automobile specialties, metal fittings, auger bits, wrenches, etc. The promoter's efforts to interest capital here has resulted in nearly \$12,000 being subscribed. Plans are to take over the machine shop and smithy, and secure for extension the old sash and door factory of the Rathbun Company. The company, which is incorporated by letters patent, has a capitalization of one million dollars. Head office will be in Montreal.

NEW CANADIAN PATENTS

(Continued from page 29)

therethrough adjacent its lower portion, a smoke flue leading from said furnace, a secondary jacket positioned about said primary jacket, deflector plates carried by said primary and secondary jackets, the ends of said deflector plates being spaced apart out of vertical alignment with the openings formed through said primary jacket, a fresh air flue connected to the top of said secondary jacket, in vertical alignment with the top of said primary jacket, thus causing the cold air to be first injected on the top of the primary jacket and then deflected by said plates around the primary jacket and pass through the openings in the primary jacket and be heated by the furnace, hot air pipes leading from the primary jacket and cold air pipes communicating with the secondary jacket.

Do You Read These Advertisements?

Every advertisement in this magazine is worth reading. It is the product of some concern that is using a modern piece of selling machinery—technical paper advertising—to present most effectively to you the leading features of its line.

These advertisers are making it easier for you to buy intelligently with the least waste of your time and theirs. They realize that a sales force can not replace this service at equal cost. They know that advertising is good business, for the manufacturer who does not advertise cannot save the cost of advertising. Consistent advertisers are progressive merchandisers. They are saving your money and their own; and it pays to do business with them.

Don't miss your opportunities. These advertisements are interesting. Some are distinctly instructive, and a glance through them every month will keep you posted on the latest developments in Sanitary Engineer.

The Brand that has the Quality

Pipe Fittings

Made in Canada

Brand Pipe Fittings, etc., give a service and satisfaction that will invariably get you re-orders and much new business as well.

Allpriser

The Reliable Price Clerk

Will Save You Dollars in 1921

MANY plumbers and manufacturers know the value of Allpriser and appreciate the reliable information it gives.

For 7 cents a day you can secure positive insurance against costly errors—errors are always unexpected.

Allpriser Service consists of a flex-

ible, leather bound book 7 x 9, of 150 loose-leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest changes.

Allpriser will save you hundreds of dollars in 1921, think it over, and write for interesting literature.

Toronto

Cutter— $\frac{1}{2}$ " to 2"

Use Beavers Threaders and Cutters

They're so much quicker, so much easier, so much handier—so very much better in every way.

If you are a big pipe contractor, adopt the complete family of Beavers—die stocks and square-end pipe cutters. Nothing can pay better returns than such an investment.

No. 25—1" to 2"

If yours happens to be a newer, smaller shop, adopt part of the Beaver family, not forgetting the little Beaverette which threads from $\frac{1}{4}$ -in. to $\frac{3}{4}$ -in. pipe without changing dies—two sets of dies on one cam plate.

JARDINE and TOLEDO PIPE-THREADING TOOLS

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo has no cams or gimcracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

"Toledo" Geared Adjustable Threading Tool.
No. 2 $\frac{1}{2}$. Capacity 2 $\frac{1}{2}$ to 6 in. inclusive.
Weight 120 lbs.

The Publisher's Page

TORONTO

JANUARY 15, 1921

TWO FACTORS determine the value of a paper's circulation to the advertiser—quality and quantity.

The quality may be judged by the methods of obtaining subscriptions.

The quantity may be known absolutely by an independent and expert audit of the circulation records.

Both points are covered by the reports of the Audit Bureau of Circulations.

The advertiser who buys space on a business basis asks for an A.B.C. statement and studies it.

If an advertiser who does not demand an A.B.C. statement conducted the other branches of his business on the same method, he soon would not have any business to conduct.

An advertiser is entitled to the facts. An A.B.C. paper has nothing to hide.

Sanitary Engineer is the only Plumbing, Heating and Tinsmith publication in Canada that has submitted its circulation to the Audit Bureau of Circulations for an A.B.C. Audit.

Practically all good buyers of Plumbing and Heating supplies in Canada are readers of Sanitary Engineer, Plumber and Steamfitter of Canada.

Williams' Improved "Vulcan" Drop-Forged Chain Pipe Wrench

FEW tools are called upon to stand greater strain and harder wear than the pipe wrench. Because Williams' "Vulcan" Chain Pipe Wrenches have withstood every test during years of hard, continuous service under all conditions, they have earned a well-deserved reputation for dependability, and are favorably known the world over. They embody every good feature for which Williams' Superior quality stands.

Made in 8 sizes for $\frac{1}{8}$ to 18 inch pipe. All Flat Link Chains are "proof-tested" on a standard tension machine and "certified." Every wrench is unconditionally guaranteed. Ask for our descriptive Booklet of Pipe Tools.

This is a
“Q”
 Foot Valve

And it Just **CAN'T** Leak

There are more pump troubles caused by “leaky” valves than from all the wear and tear which occurs in the average life of a pump.

The “Q” valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that **JUST CAN'T LEAK.**

Made in sizes from 1 to 8-inch.

THE old style side arm combination was as inefficient as candle light. It was awkward, a gas-eater, slow, heated more air than water, and, like the candle, it has given place to the new and better way.

M **GAS WATER**
HEATER
Marvel
Gas Heater and Boiler Combined

is delivered on the job completely assembled, and, with the addition of a single gas connection, is as quickly and easily installed as an ordinary range boiler.

It heats water quickly, with little gas. Is odorless, silent, safe. Brings back no complaints, avoids adjustment losses.

Made of extra heavy material. In all sizes. Tested to 150 pounds under working pressure, and guaranteed for two years. It's the best non-automatic water heater made. Write direct, or to your jobber, for prices and literature.

Made in Canada

Sold and installed by plumbers exclusively

VITRO

NOTROUBLE
TANK

For Your Satisfaction Insist on Vitro

ONE item in the long list of Vitro superiorities is the special, non-porous composition from which Vitro Tanks are so carefully molded.

An important item, it is true, but not the *sole* reason why Vitro has earned the title "No Trouble Tank."

The people and the plumbers of Canada know that their satisfaction and profit have depended on the selection of the Vitro Tank. They *should* know that the name Vitro implies a *complete tank*, fittings included, that years of experience have perfected.

It is this complete Vitro Tank that has made thousands of dollars for Canadian plumbers in the past, and it is this complete Vitro Tank that must continue to do so in the future.

There is only one Vitro Tank. It is made from start to finish to eliminate trouble. And it is made exclusively in Canada by

EMPIRE

Products Cover Canada

*"If it's an EMPIRE product
you know it's right"*

THIS EMPIRE self-closing basin cock is a universal favorite on account of its improved design. By reference to the sectional illustration its superior points may be noted and appreciated.

Rollers are made of specially hard nickel alloy and will last a lifetime.

Its use in connection with the hot water side of systems will result in a great saving of hot water and fuel. It cannot rust and will wear much longer than the ordinary basin cock.

We make a complete line of sanitary fixtures and plumbing supplies. Jobbers everywhere handle EMPIRE products, and your needs will be given prompt attention.

Lieut. N. Bruce Wilson

A Little
"Straight Talk"
to the Canadian
Plumbing Trade

Introducing to the readers of this journal our new representative covering Eastern and Northern Ontario, effective February 1st. Mr. Wilson has had experiences over the last ten years that will be interesting from time to time to our customers on his territory. For some years he was connected with the Works Dept. of the City of Toronto; four years with H. E. Talbot Co., Engineers and Contractors, of Dayton, Ohio; three years spent overseas, while last year he has devoted his time to the re-arrangement of a Municipal Water Works System. We bespeak for him the same kindly interest shown our former representative, Mr. J. S. Clemens.

Yours always,

For efficiency and service,

CANADIAN BRASS COMPANY
LIMITED
GALT :: TORONTO

RANGE BOILERS

Electric Weld

The Kind With No Rivets to Leak

The strength of a range boiler is in the thickness of the shell and in the character of the seams. The Electric Weld Quality range boiler is all boiler—rivets, solder, laps, and other unnecessary materials, are not needed to "bolster up" the Electric Weld Quality range boiler.

No holes are punched or drilled to weaken the shell. In fact, in the Electric Weld the seam practically ceases to be a seam; it is a solid union of metal. It is 96% efficient—a higher efficiency than any other character of the seam.

Complete Strength in the Electric Weld

It is the modern, efficient way to make the joint. A test sample, which contained an electric weld, parted only at a breaking strain of 54,120 lbs. per square inch—the electric weld remains intact!

Every One is Fully Guaranteed—Get That?

Standard Size—For New Work or Replacement

Sink Faucets

*The Kitchen is the Power Plant
of Family Life*

A1000

A1002

Until recent times it represented the drudgery of family life. It was the fountainhead of family discord, the scene of overwrought nerves and exhausted bodies.

The "Moss-covered Bucket" and the "Well Hook" surrendered to the Pump, which was more of a variation than improvement—the lugging still remained.

Then came the modern Water Power Systems, bringing sparkling water out of the well, or the live stream, or down from the mountain side and delivering an ever-flowing supply into the modern home.

Then the White Enamel Sink with the shining quick-opening Faucets complete the miracle of an instantaneous, unlimited water supply—life's prime essential—"Hot" or "Cold" as you prefer, help yourself, a dipperful or a barrellful, it's all the same.

Install with the modern white enamel sink the modern stoutly-designed, highly-finished, quick-opening Quatern Faucet, pull the lever towards you one-quarter turn and there you are, a full rushing stream of crystal water. To close, shove the lever from you one-quarter turn, the pressure helps you, there close with the pressure.

The working parts of these Faucets are interchangeable and replaceable.

The Faucet with hose connection on the "Cold" line supplies the juice also for the water power clothes washer.

These Quaterns are the last word in Faucets, they are the demonstrators, speak for themselves, and bring the plumber another job from the "folks next door" before he leaves the neighborhood.

No Need To Ask How Could A Steel Lavatory Compartment Be Mis-shaped or Defaced

If it is a Dennisteel Lavatory Compartment it can't be defaced or mis-shaped. Its test in many of the largest schools, public buildings, factories, etc., has proven that beyond a doubt. The Steel Lavatory Compartment presents a smooth enameled surface that cannot be nicked or chipped. Pencil marks can be removed with an application of soap and water.

***Running Water Badly Needed in Rural
Districts — The Westco Fills the Need***

**AGENTS MAKE GOOD
PROFITS**

Our agents are making splendid commissions. The farmer is deeply interested to begin with, and the talking points of the Westco are without number. You, too, can make good money selling this water system.

Write us.

Every farmer or rural resident having electricity on his farm or premises is a splendid prospect for the Westco Tankless Water System. Running water is one of the most urgent needs in the country to-day.

Farmers everywhere are demanding a good water system—and the Westco fills the need perfectly. There is big money in it for you. The field of operation is enormous. There is the whole of the vast rural areas, and suburban and outlying parts of cities and towns. It is a proposition replete with possibilities.

The Westco requires no storage tank—water is pumped direct from source of supply to taps. Entirely automatic; open tap, pump starts; close tap, pump stops.

Simple to understand, and is self-lubricating. Inexpensive to buy, maintain and operate.

No gear, no valve, no belt—only one moving part in the entire system—the impeller.

Above all—thoroughly reliable.

Urges National Housing Commission

Measures for Relief of Housing Shortage Discussed at Annual Meeting of Canadian Building and Construction Industries—
Approve Formation of National Joint Conference Board—
Welfare of Country Depends Upon Revival of Building.

(By Special Correspondent of Sanitary Engineer)

WINNIPEG, Man.—In view of the outstanding importance to the Canadian plumbing trade of any movement presaging a renewal of activity in the building industry, the proceedings at the convention of the Association of Canadian Building and Construction Industries, just completed in this city, are of interest. It is a recognized fact that for some years there has been a marked scarcity of housing accommodation in practically every Canadian city, but the urgent need for housing has not been sufficient to move contractors from their inertia due to the fact that building costs have been too high to make building profitable. Meanwhile the condition has become more acute, and Governmental action is called for in order to bring relief.

A proposal that the Federal Government should be urged to float a \$250,000,000 housing loan by the sale of Government bonds was considered at the convention. Another important point which received attention was the proposed establishment of an apprenticeship system in the building trades throughout the Dominion. Both questions were favorably reported upon by the National Joint Conference Board, formed as result of discussions with representative labor men and committees were struck to bring in definite resolutions regarding them.

In reports of committees as submitted, it was pointed out that claims made to the Government by the association had been recognized.

National Housing Board

At the close of the session a resolution to the effect that the Federal Government should make money available for housing purposes, and that it should form a National Housing Board on which the workers should have representation, was passed. The convention urged that the Housing Board should act as the agent of the Government in investigating and recommending appropriations and make money available through well-established loan companies.

The report of the standard practices committee, favoring the use of Canadian materials in building construction work, was adopted.

Approval was given the standing committee of labor in entering into an arrangement with labor men for the formation of a national joint conference board.

Mayor Edward Parnell emphasized the im-

portance of following the principle of the square deal on the part of the employer and the determination on the part of the worker to do what he could to help matters. Premier Norris spoke briefly on the natural resources of the West in materials required for building.

Building Activity Predicted

President J. P. Anglin gave his address at the afternoon session. He stated that comparatively little construction work had been done in Canada since the war started, and expressed his belief that the greatest building period in the history of the country was about to be entered upon. Whether it was realized or not, the very welfare of the country depended more on a revival of building activity than on any other single factor. "Think of the mines, forests, mills, industries, railroads and ships that are kept going when we are all working at full capacity." Regarding general overhead, job overhead and unit labor costs, he believed that probably the peak had been experienced for this generation. The same could also be said in all probability of building costs. Most of the responsible concerns were getting even with the game, and there was a tendency already toward a reduction of prices.

Activities of Labor Committee

R. J. Fuller reported on the activities of the labor committee and detailed the efforts that had been made to get on a harmonious working basis with the representatives of labor, as a result of which the National Joint Conference Board had been created. With reference to the proposed establishment of an apprentice system, Mr. Fuller said there were three main points: Number of apprentices, assistance in arranging and training, and hours to be devoted to technical training.

Moving the resolution on housing, which was finally adopted, President Anglin pointed out that provision was made for an owner to make use of his own labor in constructing his house, that the owners would be encouraged to build on their own individual lots, that the maximum value of the house on which a loan might be granted was \$8,000 (although he had originally favored \$10,000), and that loans could be available for duplex and three-flat houses. He was strongly of opinion that the money should be made available through the existing channels, which were the loan companies.

Combined Drain is More Efficient Than Single Drain—Fall of 1 in 30 is Sufficient Gradient—Notes of English Sanitary Proceedings.

By J. STUART KING, A.M.I.C.E., M. Inst. M. & Cy. E., District Surveyor, Birmingham.

SOME interesting notes on domestic drainage have been made from proceedings at the Royal Sanitary Institute, London, England.

The system of drainage is usually laid down by the local authority; if all rain water must be kept from the sewage drains, these are not so well cleansed and there is also the danger of water course pollution through the improper use of rain water gullies.

The present state of the law makes it difficult for many local authorities to permit two or more houses to be drained by one drain. Various authorities including Birmingham have obtained powers in their Local Acts, and with present day prices the saving is greater than ever. A properly laid combined drain should work more efficiently than a drain from one small house, and the initial outlay is much smaller.

Interceptors are still necessary in most towns and serve useful purposes, but one interceptor on a combined drain should be sufficient for the whole block of houses.

With present day prices and the necessity of keeping the cost of houses down no manholes should be constructed unless they serve a useful purpose, otherwise it is insurance against an accident that may never arise. Manholes sometimes aggravate nuisances owing to their ability to store sewage.

There have been great improvements in drainage work in the last 20 or 30 years, but, like all work that is hidden, there is a danger of scamping if inexperienced men are employed without good supervision; all drains should be tested with water when laid and again at the completion of the house. A district that requires good drains for new houses soon acquires a satisfactory reputation. A good drain will last longer than the house but a badly laid one will cause trouble sooner or later.

It is necessary to provide drains sufficiently deep to drain the lowest floor of a building and cellars should not be constructed where they cannot be efficiently drained.

The requirements of the usual building by-laws are on the right lines and if intelligently followed will lead to good work. In some cases amplification in small details would be an advantage, and such points as the weights and method of jointing soil and vent pipes, the provision of rust boxes at the foot of vent pipes might be inserted. A vent pipe that does not carry sewage without a rust box at the foot rapidly becomes useless.

It is to be regretted that many water authorities do not sanction three-gallon flushing cisterns, as the additional gallon is a great help in flushing a small drain.

Owners of houses should keep an accurate plan of their house drains and these should be transferred with the deeds when houses are sold. If owners would have their drains superficially examined, and well flushed at regular periods, they should have very little trouble with them.

Favor Three-Gallon Flushing Cistern

Mr. Robert Green (Birmingham) desired to pay his tribute of appreciation of the manner in which the author had prepared his paper upon a subject which he considered one of the most important in connection with the erection of dwellings, especially those of the smaller class properties. He endorsed the author's recommendation. He considered that

in many cases a three-gallon flushing cistern would result in less waste, as it might render unnecessary the cistern being used more than once each time the W.C. was used. The flush pipe should not be less than $1\frac{1}{4}$ or $1\frac{1}{2}$ inch diameter, and that drains should, where practicable, be laid with a gradient resulting from a fall of $\frac{3}{4}$ inch to each pipe. He emphasized the importance of rust boxes to ventilating shafts, which should be of cast iron with a strong wrought iron handle, and the shaft should be of wrought iron and not steel.

Fall of 1 in 30 is Ample Gradient

Mr. John Parker (Hereford) said that as to the size of the drains a good deal depended upon the gradient. A long experience had convinced him that a fall of 1 in 30 was ample. A novel event had just occurred in Hereford, where a contract for 232 houses was now being carried out, and by some peculiar process of reasoning, the bricklayers had come to the conclusion that the laying of house drains was the work of bricklayers and not expert drain layers. Some laborers, who had become very efficient in such work, were now objected to, as they were not members of the trades' union, although bricklayers had not previously been trained to such work. A

Annual Meeting of Master Plumbers

Toronto Society D. S. & H. E., Re-elects Most Officers of Last Year—Plumbing Business Quiet—No Move to Attract Apprentices Till Business Improves.

THE annual meeting of the Toronto Society Domestic Sanitary and Heating Engineers, deferred from the usual date in December until the January regular meeting of the society, resulted in the return of practically all the officers elected last year. Results of the elections were as follows:

President—George Clapperton.
Vice-President—Roy Belyea.
Treasurer—Thomas Maxwell.
Secretary—Garrett F. Frankland.
Auditors—Messrs. W. A. Lord, D. Norwich, F. A. Wiles.

Executive Committee—G. R. Baker, C. H. Chapman, F. H. Gentle, J. Hall, G. Lynch, M. T. Rodwell, H. A. Weinraub, John Wright, R. A. Pratt, all of Toronto.

Very little discussion of matters other than pertaining strictly to the routine of the regular meetings was indulged in. Members of the society agreed that business generally in the plumbing trade is quiet. While action is being taken by the building industries to get action on the part of the Federal Government to relieve the housing situation by providing a loan to encourage builders, no supporting action is being taken by the plumbers' association locally at the present time. It is thought that the Federal Government will be slow to move in dealing with this situation and that probably the provincial administration would be a little more sympathetic.

Night classes of instruction are still being held at the Technical School in Toronto for apprentices in the plumbing and heating trades, but little effort is being made to attract more apprentices or to enlarge the scope of the technical education at least until business becomes more active.

UNIFORM PLUMBING REGULATIONS DESIRED

Brantford. — President George Broomfield, of the Ontario Plumbing and Drainage Inspectors' Association, announces that that body, which convenes here in February, would take action to appeal to the Legislature for uniform legislation on plumbing regulations and inspections. At present each municipality makes its own, and there is much confusion.

Heating and Ventilating

Combination Heating Systems

Second article of an important series written exclusively for Sanitary Engineer by
N. A. Kearns.

Exposure: E.

All rooms on the ground floor, with the exception of the kitchen, should be figured for a temperature of 70 degrees above zero when the outside temperature is 10 degrees below. Allowance should be made for two changes of air per hour

in the dining and living rooms. One change is enough to allow for the kitchen and three is not too much for the hall.

The E.G.S. for air is 1.55 of the cubic measure.

The E.G.S. for wall construction, like that of this residence, is $\frac{1}{4}$ of the exposed wall surface.

We take the living room first, and find that we have 1,359 cubic feet or 24.7 square feet of E.G.S. But as this room is to have two changes of air per hour we must consider that the E.G.S. is 49 square feet.

The wall surface of 225 square feet divided by 4 gives us 56 square feet. There is one wall here exposed to the west. This wall has an area of 88 square feet, and as all western exposures require an additional 10 per cent. we must consider that the E.G.S. for the walls of this room is equal to 57 square feet.

After adding the E.G.S. to the actual glass surface, we multiply the resulting sum by the temperature range of 80. For this room we find, by this method, that

the heat loss is equal to 13,120 B.t.u. per hour.

Bed rooms should have one change of air per hour.

Northern exposed surfaces should have 15 per cent. added to their areas.

The heat losses from the other rooms are:

Dining room: 12,240 B.t.u.

Kitchen: 8,160 B.t.u.

Hall: 8,240 B.t.u.

Upper hall: 3,520 B.t.u.

Bed room No. 1: 9,300 B.t.u.

Bed room No. 2: 7,120 B.t.u.

Bed room No. 3: 6,800 B.t.u.

Bath: 3,280 B.t.u.

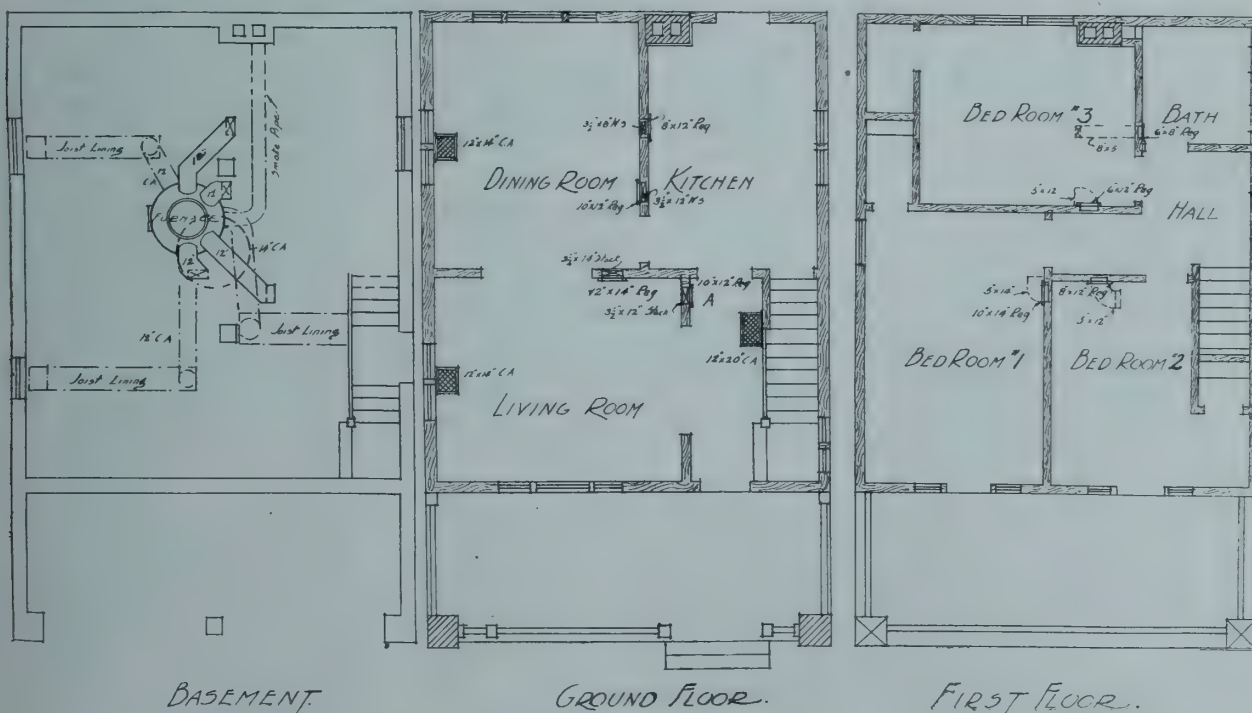

Thus, we find that the total heat loss from this building will be 71,780 B.t.u. per hour, when the outside temperature is 10 degrees below zero.

These figures divided by the factor of 204 show that the grate area should be 351 square inches.

This grate is about two sizes larger than what might ordinarily be put in a house of this size. It is the unusual amount of glass surface that makes necessary the excess in the area of the grate.

Another thing: This grate was based on a coal consumption of three pounds per square foot per hour, while the heat loss was estimated for the coldest winter

Continued on page 16

Selling Women Plumbing Fixtures Through Their Own Arguments

A WESTERN dealer felt that his sale of washing machines was slumping. He ascribed it to the need of a new selling talk. This business man decided that women—the washing machine buyers in the last analysis—were best qualified to furnish him with new sales ideas.

To gain the needed information he offered a cash prize to the woman giving the best reason in 75 words, or less, for wanting a power washing machine. Two thousand women took part, and the condensed sales talk collected was a most valuable asset to the merchant in his selling and advertising, knocking as it did from under it certain moss covered and long cherished sales bromides. The list of prospects, the principal aim as the contest was originally planned, became a mere by-product.

30 per cent. gave time as a reason; 25 per cent. mentioned strength; 14 per cent. health; 12 per cent. youth and beauty, and so on down to 3 per cent., who sought happiness through possession of a power washer.

What is the matter with a community advertisement campaign conducted jointly by all the plumbers and heating contractors in a town or city? Or of a plumbers' association featuring certain plumbing fixtures, high-grade brass goods, water heaters, water, steam or vapor heating, or in fact, any plumbing or heating appliance?

What a field for future advertising and business building that opens up! First of all the list of prospects—for surely every woman contestant will be more than sold on "A Laundry in My Own Home," or "Better Plumbing Brass Goods," or "Modern Heating," when she submits her essay. It can't be more than a step—and a short one at that—to a completed sale. Let the women show you how.

Then the essays, which didn't win the capital prize, will furnish excellent advertising copy for circular letters and newspaper copy for months afterward. Every contestant will be willing to have her effort printed, if for no other reason than to show the public the judges were wrong in not awarding her a prize.

Each of these letters—or essays—can be made the nucleus of business building advertisement. Miss X, Miss L, and Miss R, have practically sold themselves a certain

fixture or appliance that the plumbing and heating contractor has for sale. Let them tell why to their sisters, and thus enable Rockville plumbers to sell still others.

This can be made an advertising campaign really worth while. It will have local color and personal interest. That is the kind of campaign that pays a dividend.

BUILDERS PREPARING FOR ANNUAL CONVENTION

Winnipeg.—Harry Agnew was elected chairman of the general committee for the first annual home building exposition which will be held in the Board of Trade building, March 28 to April 2, by the building industry of western Canada. Mayor Edward Parnell was made honorary chairman.

Subsidiary committees were also appointed representing the various building trades with the following chairmen: Building plans committee, Fred Lamar; bungalow committee, R. J. Crawford; building, loans and finance committee, H. T. Hazelton; booths committee, M. McInnes; display committee, L. C. Stephens; educational committee, D. B. Sprague; floor committee, A. J. Taylor; home sites committee, E. J. Ransom; publicity committee, John Davidson; transportation committee, W. E. Milner.

The executive committee consists of W. H. Carter, chairman, W. P. Dutton, J. H. Parkhill, James Mackie, Walter Belyea, George Seale, J. S. McDiarmid and H. H. Lincoln.

Mr. Lincoln was made secretary of the exposition, and inquiries should be directed to his office, 706 Confederation Life Building.

COMBINATION HEATING SYSTEM

Continued from page 15

weather. Under ordinary conditions the heating engineer might figure that the fire could be run a little harder in the very cold weather, so that four pounds of coal could be burned per square foot. If we allow for four pounds of coal, the dividing factor would be 272, instead of 204.

A dividing factor of 272 would give us 264 square inches as the required area of the grate.

The drawings shown herewith are the plans of the small house referred to in this series. These plans are shown for the purpose of illustrating how the principles of warm air heating are applied in the details shown.

With a later article we intend to provide drawings of a much larger residence; and then we shall show the vari-

ous details of the hot water apparatus, as well as those which are to be considered as the warm air parts.

In designing a warm air system for a residence of this size the engineer might take either of the two courses already touched upon by some of the articles that have already appeared in the Sanitary Engineer. He might determine the required capacity of the furnace and the required areas of the registers by proportioning these to the size of the rooms which are to be heated; or he might, with more exactness fix these requirements by making use of the "heat loss" method of figuring.

However, it is only the experienced engineer who may, with safety, take the short and easy course of proportioning furnaces and registers to the size of the rooms: the novice, if he wishes to be sure of the success of his designs, must use the "heat loss" method until the extent of his experience warrants the exercise of his judgment, then, and not until then, may he discontinue the use of the B.t.u. as the basis of his calculations. (To be continued)

THE QUESTION BOX

Question.—I am sending two rough sketches of some work I would like to have some information on. I have a process of heating liquid in a barrel (which no other container would do) to a temperature of 150 degrees Fahrenheit and hold that temperature for one week, night and day. I have been using $\frac{1}{4}$ -inch copper pipe for a coil to go

gallons of water to the required temperature.

We must add 25 per cent. to these figures, to allow for a factor of safety. This gives us a total of 40,000 B.t.u. as our requirement.

Now, we shall allow 10 hours in which to raise the required temperature of this quantity of water. Therefore, for 40

gallons of water we shall allow 4,000 B.t.u. per hour.

A copper pipe will transmit 300 B.t.u. per square foot in an hour for each degree of temperature difference between the steam and water. The temperature of steam at 20 pounds is 257 degrees.

The mean temperature of the water will be 100 degrees. Therefore, to heat 40 gallons of water from 50 to 150 degrees in 10 hours, we shall require .088 square feet, or 16.3 linear inches of $\frac{1}{4}$ -inch copper tubing.

With steam at 1 pound pressure we require .12 square feet, or 21.9 linear inches of $\frac{1}{4}$ -inch copper tubing.

With water in a forced circulating system, and at a temperature of 210 degrees, we require .125 square feet, or 22.9 linear inches of $\frac{1}{4}$ -inch copper tubing.

For water circulating in a gravity system, at a temperature of 150 degrees, we require .27 square feet, or 49.4 linear inches of $\frac{1}{4}$ -inch copper tubing.

Now, these figures are based on a Continued on page 23

PLAN

through a 2-inch opening in the side of the barrel and return out the same hole and the condensation then goes to the sewer. I have been heating two barrels that way and I would like to do 200 barrels a week with same process, if hot water could be used to hold the temperature to 150 degrees better than steam. Would you please give me a sketch showing the piping and the size that would be required? Are my sketches satisfactory; if not, would you please correct them? If my sketches are not plain please let me know as I would like to have an answer as soon as possible.

Thanking you for your past information, I remain,

AN EARNEST READER,
Belleville, Ont.

Answer.—Assuming that the liquid to be heated is water, and that it is to be warmed from a temperature of 50 degrees to 150 degrees, we find that it will take 32,000 B.t.u. to raise the 40

CORRESPONDENT'S SKETCH N°1.

The heating coils must be made out of $\frac{1}{4}$ " Copper. After the coil is made up it is to go through a 2" Hole in the side of barrel. The inside dimension of the barrel is 22". The barrel holds 40 gallons of liquid which is to be heated to a temperature of 150° and kept at that temperature for one week.
What size should the piping be to feed 200 Barrels at one time?

CORRESPONDENT'S SKETCH N°2.

PATTERN FOR INTERSECTING ELBOWS

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri.

NOW and then it occurs that elbows must intersect of similar diameters, leading from a pipe of the same diameter.

However, in this case we consider it as a problem of development and to make it a little more complicated a tee of smaller diameter is added.

So measure off your diameter and establish the vertices, and describe the heel and throat lines for angle elbow.

The degrees of angle and the number of pieces can be made at pleasure.

When the mitre lines are set in, thereby defining the various gore pieces and their intersections; then describe the half sections "A" and "C" and treat in equal spaces.

With these spaces we draw the elevation lines, always taking care so they are parallel to the gore piece they pass through.

Then to establish the mitre between the tee and gore pieces, pick the section "C" with all its points and set in "A" as "C." Then from points in "C" square lines into section "A."

From these points follow up the lines, until they intersect those from "C" in tee.

This permits drawing the mitre line between tee and elbow gore piece.

Attention must be given to the high point intersection as X-Z.

No other lines intersect these high points, so we must make lines, extending them to section "A" as in points X'-Z'.

This enables setting these high points in patterns as shown.

To set out the patterns, pick the girth from section "A" and use it for gore pieces I-II-III.

Observe gore I and II only has a partial full girth, and the points Z' or X' show the finishing lines.

The girth for tee IV is picked from "C" and set off as shown.

These elbows are developed the same as all elbows we have considered in these columns. When finished add laps for seaming or riveting.

Pulling Publicity for Live Plumbers

Planning Ahead for the Year—Careful Survey of Your Own Possibilities—The Man Who Goes After It Gets the Business And Prestige.

"GET the business." It would be impossible to make even an estimate of the number of live concerns whose sales managers have preached that little slogan of three words to the field force. Those concerns whose men have imbibed it, who have kept it right out in front of them every working day, have picked the plums. And it is quite as applicable to the plumber whose establishment may consist of small layout and comparatively limited territory as to the larger company of limited liability proportions.

The business that is established without some preconceived plan is likely to be painfully hopeless with regard to definite growth. This is so to-day in a special sense as competition is very keen, and in fact is growing keener. Every man entering business owes it to himself to make a plan and work to that plan. This is quite as applicable to the plumber of 1920 as to the other fellow.

Making a Start

It is well to look ahead. Plans for 1921 ought to be considered soon. It

takes time for these to mature, and a great deal of thought on this important feature will repay one many times over.

Much depends upon the district from which the plumber can draw his custom. Some are located in the large centres where several hundred thousands of people make up the population. There are in such points, as a rule, just as many plumbers and steamfitters, relatively, as in smaller towns. Despite this fact some have reached out beyond and picked up profitable contracts.

Take a typical small town. The population runs from 1,500 to say 5,000. There will be, in even the smallest of these, a local paper. The rates will be much less than those charged by the big dailies in cities where circulation is much greater, making for much higher rates. The plumber in the small centre here avails himself of even a better medium than a brother plumber can in the big city, for there will very often be an excess circulation in the latter for which he must pay, with probably little chance of any return. Therefore an advertisement, appearing regularly

in the town paper, will probably yield bigger returns for a given amount than can be secured in any other way. A suggestion or two that might prove resultful, if varied occasionally, appear elsewhere in this article.

Adding to This

There are at least two other ways in which advertising may be conducted by the small town plumber, and these mean less outlay, perhaps, than that required in buying newspaper space.

Have you a mailing list, or have you considered the advantages of having a good one? A retailer ought to have one of these, and it ought to be as nearly accurate as it is possible to make it. Properly prepared, with correct initials, correct addresses and indexed carefully, it forms the basis of one of the best selling plans that can be developed.

Let us suppose that John Smith is building a new house. This may have come to your notice through the local news note page of the town paper. With the mailing list at hand you can sit down and write him a letter. This may be brief, congratulating John on

PLUMBING ARRANGEMENTS YOU ARE PROUD OF INSTALLED BY US

You want the best in plumbing. The health of your precious family depends upon the care with which plumbing fixtures and piping are installed.

Your safety is a first consideration.

Have you thought what it would mean to have a leaky joint in your soil or water pipe? Or what a defective closet bowl might entail if installed?

Your safe plan is to secure the services of experts when you want plumbing installed. It matters not what your plumbing needs are, we can supply them with our expert service. No charge made for advice and we're glad to confer with you. Why not call us up before you forget?

MASTER PLUMBERS LIMITED

Ready Any Moment

When You Build Plan Your Plumbing With Great Care

In short, let us help you by suggesting the best methods, which, if adopted, will give you the best layout possible according to type or house design.

We have experts who are well versed in planning just for people who want the best in plumbing. They are ready on short notice to advise. If you want the maximum of comfort in your arrangements they will gladly figure with you.

Our service is dependable and the best, we believe, that you can obtain. Efficiency all through insures you against incompetent workmanship. You should have the best.

Blackstone - Plumber

"You Get a Master Service"

his enterprise and wishing him the best of luck in getting material and labor, and a first-class job, and ending up with a suggestion that he pay extra special attention to his plumbing arrangements. In a tactful manner it will be well to suggest that you will be glad to give him some pointers on this, even though he is not yet ready to place a contract. When he is ready, he will, if fair, give you a chance to quote a price.

In addition to this, in many districts, it will be possible to make use of the poles and trees bordering the roads leading into town on which to place well-lettered signboards. These are worth many times their cost even as reminders.

Then, of course, in addition to this there is the importance of becoming a good mixer, of making the most of opportunity in cultivating new friendships, and this will very naturally devolve upon the plumber himself. Goodwill is necessary and can largely be acquired in this way.

For the City Plumber

While the underlying principles are much the same in reaching out for business, the city plumber has a wider field. As compared with his confrere in the smaller centre he has an opportunity of getting in on the higher-class business. In soliciting this he will be wise if his plans are broad enough to embrace the man of means. With all the capital he needs, he will perhaps have two or more

Mr. J. A. Bordon,
Huxley,
Anywhere.

Dear Mr. Bordon:

It has just come to our notice that you are about to build a new home. You are to be congratulated on choosing so excellent a site.

You will, of course, be anxious to have the best possible plumbing for a given outlay. This you owe yourself and your family, and nothing that you will need requires more careful planning or selecting.

For many years we have made a careful study of the best fixtures and also of the most approved plans of installing the same. We have acquired an expert knowledge that is yours for the asking. When ready to consider plans, even for the roughing-in of your piping, we shall be glad to confer with you. This will place you under no obligation whatever and you are free to make what arrangements for the work you deem to be in your own interests.

Our showrooms have just been re-stocked with some new designs that we want you to see. They are so much in advance of any patterns that have come to our attention that we know you'll want to see them. Come in at your convenience and we will gladly explain their good points.

Very truly yours,
Master Plumbers' Limited.

Suggested Sales Letter

complete bathrooms in his new home, an extra slop sink or two, one or two sets of laundry tubs, shower arrangements, a pedestal lavatory or two, and many extras that are not installed ordinarily.

In reaching out for this trade—a very profitable one—it would seem good business to secure a fair-sized space in either a morning or evening paper that goes to the well-to-do. A message

BLACK'S CORNERS, CANADA

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

Plan of Imhoff Tank. FIG. 33

Article No. 25 of the Series—Illustration No. 33

(Continued from last issue)

Fig. 33 illustrates a combined single chamber septic tank and artificial filtration bed, suitable for a large mansion where the adjoining land cannot be utilized for filtration purposes. The septic tank is similar to those previously described having concrete baffle walls protecting the inlet and outlet openings. Current breakers constructed of wood can be placed below the inlet baffle wall to break the velocity of the incoming sewage and prevent disturbance of the deposited sludge, if considered necessary, by nailing same to the wooden plugs built in the concrete walls.

The liquefying septic tank has many advantages over the sedimentation tank owing to the decomposition of part of the sludge which is a great saving in cleansing operations. Still the clarified effluent from a liquefying tank is very much more offensive and stronger, thus it places more work on the oxidizing filtration area caused through its longer contact with the decomposing sludge compounds during the process of purification so that whilst the septic tank reduces to a certain extent one of the greatest evils

in sewage disposal—namely the sludge problem—yet again the clarified effluent from a settling tank does not require the same amount of treatments as that from a liquefying tank, but until some other more economical system is adopted for the destruction of sludge, there is little room for doubt that the best and cheapest form of tank installation for small communities is either a well-designed liquefying tank or modified type of same.

The longer sewage can be detained in the tank the greater the destruction of organic matter and the less offensive will be the sludge, so that in practice a limit must be drawn for economical construction on the tank accommodation.

In designing septic tanks suitable for large buildings the constructional design can follow those previously illustrated for private houses except the sizes should be increased (which must be governed by the number of persons this installation has to accommodate).

EDITORIAL COMMENT

STILL MUCH RENEWAL PLUMBING WORK

THOUGH the cry is being raised by plumbing and heating engineers and others for more new building construction, it is nevertheless a fact that business in renewal installations is still far from exhausted. Take the case of Toronto, in which there are said to be 2,000 homes which lack sanitary conveniences of any kind, and in which 75 per cent. of the six and eight-room houses are occupied by two or more families while sanitary equipment is provided for one family only. Conditions in other Canadian cities are not likely to be much better than this. Here is ample room for business of this kind to fill in until new building again gets under way.

RELIEF FOR HOUSING SHORTAGE

NO one doubts the seriousness of the housing situation in Canada as a result of the lack of new building construction during the past few years, and few have had to dig as hard for business from existing buildings in the form of renewal installation work as have the plumbing and heating engineers. It is, therefore, only natural that close attention should be paid to the possibility of a renewal of building in the near future. In this connection the report of the annual meeting of the Canadian Building and Construction Industries, as reported in this issue, is of interest. The information of a Federal Housing Commission on which the workers will have representation, is urged. It is furthermore suggested that the Federal Government float a bond issue to provide the sum of \$250,000,000 for building, loans to be made on houses up to a certain value.

The Federal Government's treasury is no doubt in a very depleted condition these days owing to the heavy demands made upon it in recent years, and the continuation of heavy buying abroad by Canadians. It is, therefore, a question if the Government would be justified in further mortgaging its resources to provide such a fund. Undoubtedly the acuteness of the housing shortage calls for some definite action, and there would also seem to be little doubt that the resumption of building activity would do much to restore normal conditions in Canadian industrial life. There are those who claim that renewal of building as a means of giving employment and of putting capital into play, is all that is required to end the present stalemate. If such a con-

dition would be the outcome of such Governmental action it would seem to be quite justified. That is for the Government to decide, and meanwhile though building materials have declined considerably and wages are lower, building contractors appear to be making very little effort toward the resumption of activity.

THE BUSINESS TREND AND THE PLUMBER

IT is an undisputed fact that we have passed through a prolonged era known as a "sellers' market"—a period when any person could secure business because orders were shoved at any travelling man who would take them. All that was required to be a salesman was to have the house willing and able to ship the goods. Now, the real "salesman" is coming back into his own.

There is absolutely no call for pessimism as to the present or future in the plumbing and heating industries. There is more business to be had than the manufacturers of plumbing and heating appliances can supply material for. This statement is amply proven by facts.

To obtain his proper quota, each salesman will have to have a complete sales force of his own. The average plumbing and heating contractor of to-day is an "order-taker," and a sales force of that kind will not be productive during a period when business must be secured by real selling. Therefore, every salesman who wishes to be successful must qualify as a sales manager of his individual territory. He must know how to lay out his field and follow up his prospects.

The salesman will soon find himself calling on dead timber, if he fails to sell his customer the idea of building business; first, by securing the proper location for his business establishment; second, by having a modern display of his wares; third, by using the greatest of all silent salesman, the show window; four, by influencing the public to buy plumbing and heating materials, as a result of properly advertising their true value, through such mediums as circular letters, newspapers, bill boards, or the moving picture theatre screen, and the plumbing and heating contractor will also improve his business much by taking advantage of all such suggestions.

NEW PLUMBING GOODS

WODACK PORTABLE ELECTRIC DRILL

The Wodack Electric Tool Corporation, 23-27 Jefferson Avenue, Chicago, Ill., are offering to the Canadian trade a portable electric drill and grinder, for which they claim special features.

The motors of their own design and manufacture are said to be self-adjustable in speed to the size of the bits used. The switch located in the top handle and operated with the palm of

Wodack Drill

the hand is of the make and break type. As pressure is released switch shuts off current, thus avoiding drills running empty and ensuring operator having full control. The gears are of chrome nickel steel and motor windings are protected from injury by liquid tight grease compartments.

It is claimed that drills cannot be stalled when driven at their rated capacity. They are made in 4 sizes, and the $\frac{1}{2}$ in. size is made in two speeds.

Wodack Grinder

WODACK PORTABLE GRINDER

The grinder is designed for smoothing down castings, also for buffing and polishing. The motor is completely enclosed and is fan cooled. It is furnished with 10 feet of cord and an emery wheel, size 4 x 1 x $\frac{3}{4}$ in.

"MENO" RUST REMOVER AND CLEANSER

A new preparation known as "Meno" rust remover and cleanser, has recently made its appearance on the market. The inventor of the preparation is a chemist, who, realizing that the methods employed to remove rust, corrosion, etc., from machines, engines, tools and all metal surfaces, required considerable time and involved high labor costs, set before himself the task of devising a

much better and more economical cleansing method, with the result that "Meno" rust remover and cleanser was invented, and that it is remarkably efficient to a high degree is proven by the enthusiastic endorsements received from those who have used it. It is a combination and blending of certain chemical ingredients, which in combination produce an electro-chemical action that is said to rapidly loosen and dissolve rust, corrosion, grease, oil, dirt, carbon, paint or any other foreign substance that is adhering to the metal—irrespective of its age or hardness, its action automatically ceases when contact between the cleanser and the metal is established, and it will positively not injure or mar the surface of the metal itself in any way. There are two methods of using the preparation, by applying with a brush, or by mixing the preparation with water and immersing article to be cleaned. It is stated that the preparation is absolutely safe in every way, that it will not burn or explode, and is an economical one to use, as the same solution may be used many times over as it does not deteriorate or lose its cleansing power. Peter A. Frasse & Co., of 417 Canal Street, New York, U.S.A., are the sole distributors, and are now establishing agencies in various parts of the country for the sale of this preparation.

THE QUESTION BOX

Continued from page 17

ten-hour warming period. If it is necessary that the water be raised to the required temperature in five hours' time, then the amount of heating surface required should be twice that estimated here. If the water is to be heated to this temperature in one hour's time, then the heating surface must be ten times as great as that estimated for the ten-hour warming period.

There will be a certain amount of heat lost through the walls of the barrel. This loss will amount to 27 B.t.u. per square foot per hour while the water is being raised to a temperature of 150 degrees. The loss will amount to 54 B.t.u. per hour after the water is heated. It is this loss that must be made up after the water is once heated. If the exact amount of coil required to offset the heat loss were installed, it would take 79 hours to raise the water to a temperature of 150 degrees.

Our recommendation is that steam be used as a heating medium, and that thermostatic control of the temperature of the water be provided for. This can be arranged so that only enough heat will be added to the warmed water to keep it at the temperature of 150 degrees.

It will be necessary to place the thermostat in one barrel only. The temperature of the water in that one barrel will control the temperature of the water in the remaining nineteen barrels.

We show a drawing of a suggested lay-out for this plant.

We are assuming, for the purpose of illustration, that the steam will be admitted into the copper coils at a pressure of 5 pounds, and that 5 hours will be the time allowed for the heating of the water.

The copper tubing is arranged with a return bend, and the tube is not coiled. By arranging the tubing in this way there will be no obstruction to its free venting and drainage. The fall in the piping and in the tubing should be continuous to the points of drainage.

PULLING PUBLICITY FOR PLUMBERS

Continued from page 20

to the woman of the house might characterize some of the advertisements, and the "copy" will have to be of a high order to attract these prospects. It is service they want, for service they will have and for it they will pay. Therefore, convinced that you are the one that can supply it, and of the very highest type, let your message reveal your facilities and your ability to deliver what is demanded, not in the way of high-class fixtures only, but, as well, in the service your men are fitted to deliver.

A glance at and a study of the accompanying "copy" will convey some idea of what ought to prove timely suggestions. Now, while building is at a low ebb, why not improve the time and prepare for the better building season which is bound to come?

COMBINED DRAIN IS MORE EFFICIENT

Continued from page 14

more extraordinary claim was never made, as five or six bricklayers were now required for every one available.

With regard to combined drainage he had usually adapted 4-inch pipes to two houses, 6-inch to six or eight houses. It was well known that larger sizes were more likely to become drains of deposit than those of smaller size. In every case it was essential that drains should be ventilated. No such thing as ventilation was possible without an air inlet as well as an outlet. Some drastic change was needed in the labor question. He had carried out just before the war, for the Hereford City Council, sixty-two houses at £200 each; the same type was now costing £1,000 each.

Mr. H. H. Miller (Liverpool) said the smoke test for new drainage was to be preferred to the water test. Frequent manholes were advisable. He suggested that correct plans of drains should be compulsorily deposited with title deeds. Drainage from basement in shops in Liverpool, raised by small pump to existing drain, had worked quite satisfactorily.

Over 683,214 Farms in Ca

Investigations of the U.S. Department of Agriculture have shown that 90% of the farms have outdoor toilets.

Official figures of the Canadian Government give the total number of farms in Canada as 711,681.

Therefore, using U.S. statistics as a favorable basis for comparison, 96%, or 683,214 of the Canadian farms have outside toilets and are definite, practical prospects for water supply systems and bathroom enamelware equipment.

Every new move on the part of the serious investigator of plumbing conditions in Canada

Canada Have Outside Toilets

brings to light more and greater opportunities for the sale of plumbing equipment than were realized before.

About 54% of Canada's population is rural and 46% urban; we have shown, and will continue to show, that there are almost unlimited opportunities for business in both these fields. The Canadian trade must realize this, and through them the public must appreciate the need for action.

There is a big harvest to be had right now by plumbers who are taking active steps to sell plumbing enamelware to all the prospects in their districts.

Improvement In Building Industry

Value of Building Permits During 1920 Totalled \$107,828,855 Compared With \$81,678,152 in 1919—Indications Point to Improvement Which May Make Revival of Activity Possible.

BUILDING activities which had been on the wane throughout Canada during the later months of last year made a further decline for the month of December. The value of building permits for the last month amounted to \$4,067,274, which compares with \$4,979,302 for the corresponding month of the previous year, and \$4,903,253 for November last. It is only in comparison with some of the earlier months of the year that the extent of the decline can be realized. Returns for April, the leading month of the year aggregated \$16,-

085,649, for May \$13,953,688, and for June \$13,278,300. From that time on the building trades were hampered by increasing difficulties arising out of the unprecedented costs of materials and labor, and the acute scarcity of money that developed. The totals for the balance of the year show substantial declines.

The returns for the year, however, indicate a fair increase over the total for the previous year, standing at \$107,828,855, as against \$81,678,152, or an increase of \$26,150,703. The cities of eastern Canada report a total of \$80,307,065 for the year against

\$68,256,467, and the western cities, \$27,621,790 compared with \$13,421,685.

For the past month Toronto reports a total of \$1,117,083, which is an extensive decline over the return of \$2,039,625 for December, 1919. Montreal's total stands at \$672,900 compared with \$658,401 last year. The city of Halifax has suffered a conspicuous decline from \$314,340 for December, 1919, to \$47,155 last month, while Peterborough figures advance from \$3,243 a year ago to \$392,724 last month. Vancouver also reports a fair improvement from \$118,453 to \$320,905.

For the complete year Toronto's returns total \$25,784,732, against \$19,819,436. While this is a very substantial increase the year's returns do not constitute a record, falling short by nearly \$2,000,000 of the best year prior to the war. The majority of Canadian cities report an increase for 1920 over the returns of 1919, some of the exceptions being Halifax, with a decline of \$1,774,267; Moncton, \$932,003; Brantford, 373,817; Guelph, \$109,101; Hamilton, 747,242; Kingston, \$132,944 and London, \$308,865.

The year, 1921, opens with conditions still abnormal. Building during the present year will be guided by the extent of the decline in the costs of materials and labor, and in the easing up of the money situation. Every indication points to a substantial improvement in these factors, and builders generally are hopeful that the Spring months will witness a revival of activity on a par with that of last year.

The following are the important permits issued during December: Sherbrooke, candy factory, \$25,000; Hamilton, factory addition for the Canadian Westinghouse Company, \$125,000; London, Y.M.C.A. building, \$50,000; Peterborough, transformer building, \$210,554; annealing building, \$60,000; punch press shop, \$119,145, all for Canadian General Electric Company; Port Arthur, planing mill, \$4,000; Windsor garage, \$70,000; York Township, storehouse, \$12,000; Winnipeg, addition to St. John's College, \$20,000; Calgary, school \$157,000; Regina, police station, \$28,000.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

OBITUARY

Death of Daniel Glynn, of D. Glynn & Son, plumbers, Toronto, is announced. Montreal.—Archibald Ferguson, plumber, is dead.

BUSINESS CHANGES

Barrie, Ont.—Moffatt & Parr, plumbers, have dissolved partnership.

Kitchener, Ont.—Ruppel, Neeb & Co., plumbers have dissolved partnership.

Winnipeg.—Bullard & Carroll, plumbers, have dissolved partnership.

Selkirk West, Man. — Sveinson & Sigurdson, plumbers, have been succeeded by Hendrickson, Sigurdson and Sveinson.

PLUMBER RE-ELECTED MAYOR OF MONTREAL WEST

Montreal.—Jas. Ballantyne, past convener of the Master Plumbers' Association and a prominent plumbing contractor of Montreal, was this week returned by acclamation for his sixth term as mayor of Montreal West.

FIRE DAMAGES W. R. CUTHBERT & CO. FACTORY

Montreal.—Fire almost totally destroyed the factory of W. R. Cuthbert & Co., manufacturers of plumbers' and engineers' supplies. L. Cohen, president of the company, stated that the plant had just been overhauled and fitted anew, ready for 1921 business. Although the building was burned almost to the ground, the trade can still be supplied with their products, as the large stock which was on the ground floor was rescued from the flames and water. New building operations will be commenced in the very near future.

WESTERN ONTARIO NEWS

Charles Mason has been appointed sanitary inspector at Simcoe, Ont.

* * *

Plans are being prepared and work will be commenced early in the spring on a new sanitary sewer on Main St., Simcoe, Ont.

* * *

Plans will be prepared by the department at Toronto for a new nurses' home to cost \$35,000 for the Ontario Hospital at London.

* * *

The Knights of Columbus at Windsor, Ont., will have plans prepared for the erection of a new temple to cost \$150,000.

* * *

The contract for a new filtration plant to remove undue quantities of iron from the water supply has been awarded by the Water Commissioners at London, Ont., to the Permutit Company of New York and W. J. Westaway of Hamilton.

Silver Cup for Plumbers' Association

Curling a Favorite Sport Among Montreal Master Plumbers—To Have Premises in New Builders' Exchange Building.

MONTREAL.—At a meeting of the Master Plumbers' Association held on Thursday evening, January 20, matters of a confidential nature were discussed. Labor and excise tax being chief among them. H. Lavigne occupied the chair in the absence of D. A. Bethune, president of the Association.

Although these meetings are for the purpose of discussing important developments which become evident from time to time, sport is not forgotten and is discussed with the same enthusiasm as are business matters. The Master Plumbers indulge in the art of curling when their labor difficulties are not occupying their time, and much interest is attached to these matches. It is now understood that a silver cup will be donated by a New York firm, with a Canadian agency, to the local association for competition among their ranks. Future meet-

ings will be held the second Thursday of each month, instead of the second Wednesday, the latter day conflicting with some of the curling matches.

Previous to the meeting, the matter of obtaining floor space in the proposed new ten-story structure for offices and meeting hall for the Master Plumbers' Association was under discussion. The new building, if erected, will be owned co-operatively by the occupants, the maximum rent being \$1.50 per square foot, and stock allotted on the basis of four to six dollars for each square foot taken by tenants. It would no doubt be the proper location for the plumbers, being in the same building as their allied industries. The Builders' Exchange and Club premises will be located there, and already different construction companies and manufacturing concerns have applied for floor space.

CONVENTION OF SASK. S. AND H. ENGINEERS

Moose Jaw.—The annual convention of the Saskatchewan Society of Sanitary and Heating Engineers will be held in Moose Jaw on March 1 and the three following days. Between fifty and one hundred delegates from all parts of Saskatchewan will be present for the gathering. Local arrangements for the convention are now being made by Alderman T. J. Alexander.

On the first day of the convention the executive of the Saskatchewan Association will meet. At the business sessions of the convention the Provincial Government boiler and sanitary inspectors will be present.

On the last day of the convention the wholesalers and jobbers from the principal centres in the West will be present. These will come mainly from Winnipeg. This is one of the features of the convention which has proved very popular in other years.

SEMI-ANNUAL ELECTION OF PLUMBERS AND STEAMFITTERS

Winnipeg.—James Crawford was re-elected as president of local 254, United Association of Plumbers and Steam Fitters at a meeting held in the Labor Temple. Thomas Arnott was the unanimous choice for the office of vice-president. Other officers elected for the ensuing six months were: R. C. Neill, financial secretary; J. Rayson, recording secretary; Thomas Elder, treasurer; executive board, T. Arnott, J. Muter, G. Warton, P. Brice, A. Mitchell, and D. McKenzie; financial board, D. Fargrieve, J. Crawford, W. Goslin; trustees, D. Dobbie, R. Rodway; inside guard, J. Woodend.

A financial statement submitted showed the local to be in a sound condition. Although the unemployment situation was reported to have considerably affected the trade locally, officials expressed themselves as confident that conditions would be shortly materially relieved.

PSEUDO PLUMBER ALLEGED TO HAVE VICTIMIZED SUPPLY HOUSES

Toronto.—Louis Blugerman, Cecil street, has been arrested on a charge of fraud. The complainants are the Morrison Brass Co., the Standard Sanitary Co. and the James Robertson Co., all manufacturers of heating and plumbing supplies. Blugerman is alleged to have represented himself as a plumber, telephoned the various companies that he was waiting for certain plumbing fixtures and asked that the supplies in question be sent to him. For the conveyance of these supplies Blugerman employed an expressman and when the expressman arrived with the goods at Blugerman's home, Blugerman would write out a cheque, for which there was no funds.

Waterworks, Tenders, Construction, Contracts Awarded, Etc.

PLUMBING AND HEATING CONTRACTS AWARDED

Lindsay, Ont.—Plumbing and heating contract for citadel for Salvation Army costing \$13,000 is awarded to Boxall & Matthie, Ltd., Kent street.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

INGOT metals continue quiet and are inclined to be easier both on local and outside markets, and tin especially has been affected and is lower. Lower quotations are being made on copper rods, sheets and tubes. Brass goods are also showing the declines in metals, and lower prices are quoted on brass steam cocks, stops and wastes and valves.

Other declines now noted are conductor pipe and eavestrough, metallic shingles, sidings, etc., bar and wire solder, zinc sheets, cotton waste, some lines of pipe wrenches and

plumbers' torches, and also black and galvanized sheets.

Radiators and boilers, enamelled ware, closets, range boilers, soil pipe, and fittings are unchanged. Some of these were revised at the first of the year. Pipe prices are holding as are bar iron and steel.

At this time of the year trade is usually quiet, but a fair amount of business is reported for the season, and when building is resumed it is expected that sales will show a further improvement.

MONTREAL MARKETS

MONTREAL, January 29.—Price changes are not as numerous in the past two weeks as have been shown in some of our recent issues. Trimo wrenches are 10 per cent. lower than formerly. Copper rods, sheets and tubes have declined, and cotton wastes are now priced at reductions. Some lines of compression goods, galvanized sheets and both wire and bar solder show declines, also zinc sheets. Soil pipe, enamelled ware, closets, pipe and fittings, corrugated sheets, boilers and radiators remain at recent declines. Ingot metals are somewhat easier owing to a slump in the outside markets.

Trimo Wrenches Lower

Montreal.
TRIMO WRENCHES.—A reduction of 10 per cent. is quoted on Trimo wrenches, the new discount being 35 per cent. off list.

Decline in Copper Goods

Montreal.
COPPER.—A reduction of two cents is quoted on copper rods, sheets and tubes. Copper rods are now 32 cents base, plain sheets at 34 cents, tinned 38 cents, polished and tinned 42 cents. Tubes are now selling at 49 cents base.

Scrap Metals Dull

Montreal.
WASTE MATERIALS.—Dealers report business very dull in waste materials, with no price changes in evidence. Quotations are as follows:

Dealer's Buying Prices

Automobile tires	0 75
Yellow brass	0 07
Red brass	0 12½
Light brass	4 50
Scrap zinc	0 05
Lead, heavy	4 00
Lead, tea	2 50
Light copper	9 00
Heavy copper	11 50
Wrought iron, R. Rd., No. 1, per gr. ton	13 00

Pipe scrap (ton)	9 00
Heavy melting steel	15 00
No. 2, busheling	5 00

Boiler plate	12 00
Stove plate (ton)	20 00

No Change in Corrugated Sheets

Montreal.
CORRUGATED SHEETS.—No price changes are noted in corrugated sheets, a few shipments are being made but generally business is very quiet. Local prices are:

Corrugated Sheets—	Per 100	Sq. Ft.
No. 28 gauge	12 00
No. 26 gauge	12 75
No. 24 gauge	18 75
No. 22 gauge	22 25
No. 20 gauge	26 50
No. 18 gauge	32 75
Less 7½%		
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.		

Waste is Reduced

Montreal.
WASTE.—The decline in waste and wool packings runs from 3 cents to 5 cents a pound. A reduction was foretold in last issue, but price lists were not available until this week.

Changes in Compression Goods

Montreal.
COMPRESSION GOODS.—Several lines of compression goods have been revised to lower levels, compression bath cocks show a decline of about 10 per cent., standard flatway stop and waste also have the same reduction. Brass steam cocks are lowered, and radiator valves have the new prices. Quotations are:

Compression work, standard	Less 25%
Fuller work, standard	30%
Bath cocks, compression	30/5%
Bath cocks, Fuller	28-30%

Some Sheets Lowered

Montreal.
SHEETS AND PLATES.—U. S. standard sheets show a slight reduction this week. The situation of these is rather unsettled at present, and different quotations are made by the different jobbers. Stocks are fairly heavy in the different warehouses, orders now being filled that have been long standing. A further reduction is looked for, but at present it is probable that stocks will

have to be reduced before any lower price can be quoted.

BLACK SHEETS—

NOTE.—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

No Change in Range Boilers

Montreal.

RANGE BOILERS.—The different sizes of range boilers are holding at the recent declines. Sales of these have increased a little during the last two weeks, and it is expected the demand will gradually become greater as the spring approaches.

RANGE BOILERS—

	Stand.	Ex.	Hvy.

120-gallon	60 00		

No Change in Enamelled Ware

Montreal.

ENAMELLED WARE.—There is no change to report on enamelled ware, either in price or in volume of sales. Business continues quiet and local jobbers are anxiously awaiting building operations to commence in the spring.

Sinks, roll rim, 18x30 in.	19 55
Sinks, flat rim—

Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enamelled iron tank, with fittings, flush elbow and supplies, less seat	19 00

Same List on Pipe

Montreal.

WROUGHT PIPE.—Stocks of piping are now quite ample to meet the present day requirements, deliveries gradually improving during the quiet months. Small sales are being made to the outside dealers, and it is expected business will now improve, as previously stocks were not heavy enough to meet the demand. Following are the quotations:

**LIST NO. 48.
Standard Butt Weld Pipe
Per 100 Ft.**

Iron and Steel Dull

Montreal.

BAR IRON AND STEEL.—Business is very quiet when applied to iron and steel. Stocks in the jobbers' warehouses have accumulated until now they are well stocked, the demand being as stated very light.

Common bar iron, 100 lbs.	4 55
Refined iron	6 05
Iron finish machinery steel	4 60
Mild steel	4 55
Single reeled machinery steel	6 80
Band steel	4 55
Spring steel	6 00
Sleighshoe steel	4 55
Tire steel	4 75
Toe calk steel	5 45
Harrow tooth steel	4 70
Mining tool steel, per lb.	24½
Black Diamond tool and cast steel per lb.	24½

NOTE.—Refined iron is approximately \$1.50 per 100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Changes in Lead Products

Montreal.

LEAD PRODUCTS.—Lower prices are now quoted on several lines of lead products since the last issue of Sanitary Engineer. Solders, both wire and bar, have declined 1½ cents a pound. Zinc sheets both in casks and broken lots also show a reduction of 1 cent per pound. Prices now quoted are:

Lead pipe, per 100 lbs.	13 50
Lead waste, per 100 lbs.	14 50
Note—Lead pipe is subject to a discount of 10%	
Lead traps and bends	Net list

Tin Plate Sells Well

Montreal.

TIN PLATE.—Sales are continuing good on tin plate, due, as stated in our last issue, to the sap season coming on. Prices remain as quoted and are: 20 x 28 x 112 coke, \$25.50 case; 20 x 28 x 56 charcoal, \$13.60 a case.

Radiators and Boilers Quiet

Montreal.

RADIATORS AND BOILERS.—The revised prices which came into effect at the beginning of the year still hold for radiators and boilers. Trading in these lines is normal, considering the time of year. Quotations are as follows:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
Discount 40% for hot water and 41% for steam.
Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 39%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 50 off list.

Square or sectional hot water or steam boilers, 15-in., list price.

For Ontario Government trimmings add 5 per cent. to list.

Square or sectional water boilers, 19-in. to 36-in., 2½ per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., list price. Ontario Government trimmings, add 5 per cent.

Square or sectional water or steam boilers, 48-in., list prices. Ontario Government trimmings, add 5 per cent.

Round steam boilers, standard trimmings, 5 per cent. off. Ontario Government trimmings, list price.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Soil Pipe Unchanged

Montreal.

SOIL PIPE.—Prices on soil pipe remain at the new lower prices. There is a steady movement in these lines, small sales continuing to be forwarded. Quotations are as under:

SOIL PIPE (medium and extra heavy)—	
2, 3, 10%; 5 and 6-inch, 15% discount.	
4-inch, 20% discount.	
8 inch, add 20% to list.	
FITTINGS—	
2 to 6 inch fittings, 40 per cent. discount.	
8-inch, net.	

Ingot Metals Easier

Montreal.

INGOT METALS.—Metals this week are featured by the continuation of the slump on the London market, this affecting tin more so than the others; however, it has its very unsettling result on the markets generally.

TIN.—As stated, the slump in London has greatly affected tin. This metal has dropped £40 in the last ten days. It is very hard to state at present whether price will continue to decline or not. The local price is now 39 cents.

COPPER.—Copper is much easier in London and slightly lower in New York. The demand seems to have quieted down during the past week. Prices quoted

are 19 cents for electro and 18½ cents for casting.

LEAD.—This metal has held fairly well considering the weakness elsewhere. At present there is no sign of any lower price. Local price 7½ cents.

SPELTER.—Spelter has declined in London and United States, touching the new low point in U.S.A. of 5¼ cents. Local price 7¼ cents.

ANTIMONY.—Lessened imports have had a very strengthening effect on antimony. Local price 8½ cents.

ALUMINUM.—There is nothing new to report on aluminum, it remaining quiet and unchanged. Local price 34½ cents.

TORONTO MARKETS

TORONTO, Jan. 29.—The last two weeks have brought out a few important price changes in plumbing and steam fitting goods, although generally conditions appear steadier.

New lists and discounts issued on conductor pipe and elbows, eavestrough, etc., show a considerable reduction. Pipe fittings have been revised and are lower. Reductions have been made in prices of some compression goods, and steam cocks, stop and waste cocks, and various valves are showing declines. Some lines of solder are lower, but lead products as a whole are steadier. New prices have been made on cotton waste and show reductions of from one to five cents per pound. Some pipe wrenches and plumbers' torches are also lower. Soil pipe, radiators and range boilers are holding at recent declines. Enamelled wares are also holding, but the tendency appears to be towards further revisions. Sheets and plates are showing lower quotations, but bar iron and steel together with wrought pipe are holding unchanged. Business is naturally on the quiet side at this time of the year, but a very fair amount of sales are reported in different quarters.

Radiators, No Further Changes

Toronto.

RADIATORS.—Sales are reported as seasonably light on these goods now. Prices are holding at the change made at the beginning of the year, and 40 per cent. is quoted off list for hot water, and 41 per cent. for steam. Wall radiators are 39 per cent. off list. Lists are the following:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 40% for hot water and 41% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 39%

Soil Pipe Prices Hold

Toronto.

SOIL PIPE.—New quotations were announced in the last issue on soil pipe and fittings. The discount on the 8 inch pipe and fittings should have read 5 per cent on list, instead of 5 per cent. off list. The demand is light now, but this is expected at this time of the year. Discounts are as follows:

SOIL PIPE (medium and extra heavy)—

2 and 3 inch, 10%.

4 inch, 20%.

5 and 6 inch, 15%.

8 inch, add 5 %.

FITTINGS—

2 to 6 inch fittings, 40%.

8 inch fittings, plus 5%.

Conductor Elbows Down

Toronto.

CONDUCTOR ELBOWS.—New lists and discounts are issued on conductor elbows, and constitute a reduction from the previous quotations of from 5 to 10 per cent. New prices on plain, ribbed and corrugated elbows are as follows:

ROUND CORRUGATED OR CRIMPED ELBOWS

2 inch, list \$5 25

3 inch, list 6 00

4 inch, list 10 50

5 inch, list 24 00

6 inch, list 29 00

Less 50%.

Eavestrough Reduced

Toronto.

EAVESTROUGH.—The changes in prices of eavestrough which were forecast in the last issue of Sanitary Engineer have been made and new lists and discounts are announced. The reductions amount to about 17 per cent. Following are the new quotations:

TROUGH (Eave)

O. G., Square Bead and half round.	Size in girth:	Per 100 ft.	Per 100 ft.
8-in.....	\$15 90	15-in.....	\$28 80
10-in.....	\$17 70	18-in.....	\$36 50
12-in.....	\$21 20		
Less 50/10 per cent.			

Conductor Pipe Now Lower

Toronto.

CONDUCTOR PIPE.—New prices for conductor pipe show a reduction of approximately 17 per cent. New lists have been issued and discount is now 50 and 10 per cent. off list.

Only a light demand is experienced for the commodity at the present time.

PIPE (Conductor)

Plain, round or corrugated.

	Per 100 ft. in 10 ft. lengths.	
2 in., in 10-ft. lengths, list	\$18 40	
3 in., in 10-ft. lengths, list	22 30	
4 in., in 10-ft. lengths, list	29 60	
5 in., in 10-ft. lengths, list	40 00	
6 in., in 10-ft. lengths, list	49 00	
Less 50/10%.		

Wrought Pipe Prices Hold

Toronto.

WROUGHT PIPE.—No changes have been made in pipe prices, although a new list, No. 48, was issued January 3rd, on account of the change in freight rates.

Improvements in deliveries from the mills are reported, and for the season of the year, and considering that there is such a small amount of new building under construction there is a very good demand.

Present quotations are as below.

LIST NO. 48.

Wares Show No Change

Toronto.
ENAMELLED WARE.—Although this is usually regarded as a quiet time of the year for the enamelled ware business, a very fair amount of sales are reported in several quarters.

Prices are unchanged but the trend is downwards, and it is thought possible that there may be a reduction in prices in the near future.

Although it is not an infallible guide to the tendency of Canadian markets it is noted that reductions have just been made in U. S. ware markets.

Following are list prices, less 20 per cent, except where noted.

Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	\$51 40

Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25

Compression Goods, Lower Quotations

Toronto.
COMPRESSION GOODS.—Following the forecast in the last market report revisions have been made in several of these lines and prices are lower in many cases. Brass steam cocks have been reduced about 10 per cent, and stop and waste cocks have also the same reduction. Some makes of valves show a decline of about 20 per cent.

Following are the present quotations:

Compression work, standard	25%
Fuller work, standard	30%
Bath cocks, compression	25%

Emco J. D. Valves	10%
Emco Check Valves	10%
Webber Gate Valves	15%

Furnaces Still in Demand

Toronto.
FURNACES AND STOVES.—A very fair demand is reported for furnaces, and many enquiries are being received by manufacturers. There seems to be a desire on the part of retailers to get in on the business that is being offered by the sale of furnaces. There was an inability last fall to cope with the demand and many orders were delayed, but Sanitary Engineer is informed that very few cancellations were received and that dealers in most cases readily accepted overdue orders.

The demand for heating stoves has slowed up and with a continuance of mild weather there appears to be small prospect of any increase in business this season.

Prices show no change and are holding firm.

Fair Sales Range Boilers

Toronto.
RANGE BOILERS.—A fairly good movement of these goods is reported, and the 30 and 35 gallon sizes are most in demand.

Sales are being made at the reduced quotations noted in the last market report and are as follows:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	\$13 00	\$15 00
35 gallon	15 00	17 00
40 gallon	17 00	19 00
52 gallon	24 00	28 00
66 gallon	32 00	38 00
82 gallon	40 00	50 00
100 gallon	50 00	60 00
120 gallon	60 00	70 00

Some Lead Products Easier

Toronto.
LEAD AND ZINC PRODUCTS.—Prices are holding at recent declines on most lead products, but solders are showing a further reduction and wire solder is now quoted at 26½ to 28 cents for 40-60, and 29 to 31 cents according to quantity, for 50-50.

Calking lead is now quoted at 8½ to 9½ cents.

Whether prices of lead products will show any further declines in the near future is uncertain, but outside markets in pig lead are inclined to be a trifle firmer, and a curtailment of operations on the part of some of the largest American producers and the closing down of some of the large mines, which are reported to have suspended operations, has tended to stiffen the market.

A fairly brisk demand for lead products is reported.

Quotations are the following:

Lead pipe, list, per lb.	0 13½
Lead waste pipe, list, per lb.	0 14½
Do., over 8 in., list, per lb.	0 15½
Lead pipe is subject to discount of 10%.	
Lead traps and bends	Net
Lead sheets, 4 to 6 lbs. sq. ft., in rolls, lb.	0 10½
Cut sheets ½c to ¾c lb. extra and cut sheets to size 1c lb. extra.	0 36
Solder, wire, lb.	0 26½
Do., 40-60	0 28
Do., 50-50	0 31
Do., strictly, lb.	0 27
Do., commercial, lb.	0 24½
Do., guaranteed, lb.	0 29
Do., wiping, lb.	0 25
Zinc sheets, per lb.	0 16½
Calking lead	0 09½

Cotton Waste Now Lower

Toronto.
COTTON WASTE.—The new prices on cotton waste show declines of from 1 to 4 cents per pound, according to quality. The change was announced in last issue of Sanitary Engineer, but the new prices were not then available and have since been issued. Trade is reported quiet in this commodity at present.

Following are the new quotations:

Bar Iron Differential Reverts

Toronto.
BAR IRON AND STEEL.—Business continues quiet in bar iron and steel and stocks are usually fairly light. The differential between ¼ inch and heavier, and 3-16 inch and lighter, which a short while back was changed from 50 to 75 cents per cwt., has again reverted back to 50 cents per 100 lbs.

Following are current quotations:

IRON AND STEEL	
Common bar steel, 3-16 in. and lighter...\$	5 25
Common bar iron, 3-16 in. and lighter...	5 25
Common bar iron, ¼-in. and heavier	4 75
Angle base	4 75
Horseshoe iron	6 00
Tire steel	5 95
Band steel	5 25
Spring steel	12 75
Mining drill steel	28 00
Common cast tool steel	20 00
Sleigh shoe steel	6 00
Norway iron	15 00
Toe caulk iron	6 70
Hoop steel	6 00

Metal Shingles Etc., Lower

Toronto.
METAL SIDINGS, SHINGLES, ETC.—Reductions have been made in the prices of metallic roofings, shingles, sidings, etc., and the decline is approximately 10 per cent.

Business is said to be quiet in these lines at present.

Trimo Wrenches are Down

Toronto.
WRENCHES.—A reduction has been made in the price of the Trimo wrench,

and this is now quoted at 35 per cent. off list. Stillson wrenches are quoted at 40 per cent. off for the Canadian pattern.

Sheets and Plates Lower

Toronto.

SHEETS AND PLATES.—Further reductions are announced in the price of both black and galvanized sheets this week, and are believed to be the result of a desire to reduce warehouse stocks. Quotations are showing a considerable variation, but are usually lower than they have been for a long while.

In outside markets there is a slowing down of production except on the part of the Steel Corporation, which up to the present has been able to maintain operations.

A study of Pittsburgh markets shows that galvanized sheets have remained practically unchanged for the past five weeks, and while prices are about 25 per cent. below the average price of last year, they are about 50 per cent. above the mean average of the four years from 1913 to 1916.

The following are wholesaler's quotations here:

BLACK SHEETS		
14 gauge	6 70	7 70
16 gauge	6 75	7 75
18-20 gauge	6 80	7 80
22-24 gauge	6 85	7 85
26 gauge	6 90	7 90
28 gauge	7 00	8 00

PLATES		
10 gauge plate	6 20	
12 gauge	6 25	
14 gauge	6 30	
16 gauge	6 40	

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

GALVANIZED SHEETS		
Premier and Apollo		
10 3/4 oz.	9 30	10 50
U. S. 26 gauge	9 00	10 20
U. S. 26 gauge	8 75	9 95
22 and 24 gauge	8 55	9 70
18 and 20 gauge	8 40	9 55
16 gauge	8 40	9 55
12 and 14 gauge	8 25	9 40

An extra is now charged on galvanized sheets, 10 3/4 oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Plumbers' Torches Reduced

Toronto.

GASOLINE TORCHES.—Some lines of plumber's gasoline blow torches show reductions in price.

Corrugated Sheets Held

Toronto.

CORRUGATED SHEETS.—Sales are being made on corrugated sheets at the reductions noted in the last market report.

Business is usually quiet on these lines at this period and this season is no exception.

Quotations are the following:

CORRUGATED SHEETS—		
	Per 100 sq. ft.	
No. 28 gauge	10 50	
No. 26 gauge	11 25	
No. 24 gauge	16 00	
No. 22 gauge	19 00	
No. 20 gauge	22 00	
No. 18 gauge	28 00	

Less 7 1/2%.
For 1 inch corrugation add 50c per square extra.

Oakum Quiet; No Change

Toronto.

OAKUM.—Prices are unchanged on plumbers' oakum and quotations are \$4.75 per 50 lb. bale and 12 cents for small quantities.

Sales are seasonably light.

No Change in Boiler Tubes

Toronto.

BOILER TUBES.—Quotations are unchanged on boiler tubes, but it is possible to get slightly lower prices for a fair sized order. Business is light and sales are small in size. Prices are as below:

BOILER TUBES—		
	Seamless	Lapweld
1 inch	\$28 00	\$....
1 1/4 inch	32 00
1 1/2 inch	33 00
1 3/4 inch	35 00
2 inch	35 00	30 00
2 1/4 inch	38 00	32 00
2 1/2 inch	46 00	36 00
3 inch	54 00	45 75
3 1/2 inch	70 00	49 00
4 inch	96 00	63 00

Turpentine is Lower

Toronto.

TURPENTINE AND LINSEED OIL.—\$1.45 is quoted for turpentine in 5 gallon lots, and \$1.22 for raw linseed oil. For barrel lots quotations are 15 cents per gallon less. No change has been made in quotations on white lead in oil, or red dry lead, and prices are as last market quotations.

Scrap Materials Remain Quiet

Toronto.

WASTE MATERIALS.—The waste material markets have been exceedingly slow, but inquiries are coming to hand in better volume and prospects seem stronger. In the scrap iron market prices have been unchanged and little purchasing interest has been shown. Dealers believe that an increase in demand will be felt in a few weeks. Conditions are believed to be on the mend with the worst of depression over, and that business will come back very shortly.

The following average prices for large quantities are strictly nominal:

WASTE MATERIAL		
No. 2 busheling	13 00	
Stove plate, per ton	19 00	20 00
Scrap pipe	8 00	9 00

Yellow brass	6 00	7 00
Red brass	10 00
No. 1 machinery cast	24 00	25 00
Heavy melting steel	15 00	16 00
Heavy copper	10 50	11 50
Light copper	8 00	9 00
Scrap zinc	4 00	4 50
Light brass	4 25	4 75
R.Rd. wrought iron, No. 1, per gr. ton	13 50	14 50
Heavy lead pipe	4 00	4 50
Old rubbers, boots and shoes	2 00	3 00
Overseas lumbermen's rub. boots	1 50	2 00
Bicycle tires	0 01	0 01 1/2
Automobile tires	0 50	1 00
Tea lead	2 00	2 25

Ingots Dull; Tin Irregular

Toronto.

INGOT METALS.—Markets are reported as dull again in ingot metals and fluctuating from day to day. Tin especially has been erratic and after declines on London markets has rallied only to fall again. It is the only metal this week showing a change here, and has dropped two cents.

COPPER.—In outside markets this metal has had a lull and business is reported to be quieter again. Values are nominally unchanged but advices from New York indicate a cessation of the export demand. Quotations locally are unchanged from 19 cents for casting copper.

TIN.—Very erratic describes this metal and present quotations here are down two cents from last market report. Prices fell following weakness in London tin markets. Prices here are quoted at 45 cents.

LEAD.—This is stated to be dull and unchanged. Some outside markets are reported easier and others are a trifle firmer. It is anticipated that lead markets may have a bullish tendency as it is stated that American producers have greatly curtailed operations and a large number of the Broken Hill Mines have suspended operations. Quotations hold here at \$7.00.

SPELTER.—The market is dull in spelter and shows no change from previous quotations at \$7.50.

ANTIMONY.—Quotations are holding unchanged at 8 to 9 cents on antimony, and the metal is quiet.

ALUMINUM.—Prices are holding unchanged at 35 to 37 cents. Outside markets are reported easier in this metal.

WINNIPEG MARKETS

WINNIPEG, Jan. 29.—Few reductions are noticed in plumbing and steamfitting lines during these past two weeks. There is a feeling, however, that some lower prices are due on these goods and may shortly occur, but at present most quotations are holding firm. Soldering coppers have been reduced in price, and steam and hot water boilers are now lower. Business continues quiet in practically all lines, but this is characteristic of the season of the year in the trade.

Radiators and Boilers Reduced

Winnipeg.

RADIATORS AND BOILERS.—Although all prices were withdrawn on radiators and boilers previous to the first of the year, manufacturers issued new

discounts off the list for all lines. These new prices showed reductions on all lines, although there has been no reduction in the price of raw material, but rather increased in some cases. However, it was thought advisable to establish a new

MUELLER Bath Cocks and Basin Cocks

In Rapidac, Self-Closing and Compression Construction

The most important part of any plumbing job is the brass goods. Unless they are right, the whole job will be a disappointment to you and to your customers.

MUELLER Bath Cocks and Basin Cocks are right in design, right in manufacture, and right in finish—there is no higher standard in brass goods than those that bear the name **MUELLER**. Styles A-1500 and A-1400 above, and Styles A-2389 and A-2385 below.

Use **MUELLER** Brass Goods throughout on every job and insure dependable service and lasting satisfaction.

Write for catalog and prices. Mail orders given immediate attention.

lower selling price to remain unchanged during the present year.

Corrugated Lower in Price

Winnipeg.

CORRUGATED IRON.—The price has been reduced this week on corrugated iron and the following prices are now quoted:

Galvanized—28 ga., \$9.90 per 100 lbs.; 26 ga., \$10.56. Painted—28 ga., \$7.65; 26 ga., \$9.

Sheets and Plates Hold

Winnipeg.

SHEETS AND PLATES.—There is little or no demand for sheets and plates and the price remains unchanged.

Black Sheets—10 ga., \$8.80; 12 ga., \$8.80; 14 ga., \$8.85; 16 ga., \$8.95; 18 ga., \$9.45; 20 ga., \$9.45; 22 ga., \$9.50; 24 ga., \$9.50; 26 ga., \$9.55. Galvanized Sheets—16 ga., \$10.60; 18 ga., \$10.75; 20 ga., \$10.75; 22 ga., \$10.90; 24 ga., \$10.90; 26 ga., \$11.05; 28 ga., \$11.65

Soldering Coppers are Lower

Winnipeg.

SOLDERING COPPERS.—The prices have again been reduced on soldering coppers and are quoted this week as follows:

3 lbs. and over, 52c per lb.; 2½ lbs. and over, 53c per lb.; 2 lbs. and over, 54c per lb.; 1½ lbs. and over, 55c per lb.; 1 lb. and over, 60c per lb.

Improvement in Pipe Situation

Winnipeg.

PIPE.—There is a remarkable improvement in pipe conditions and before long stocks will be in very good shape. Deliveries are now being made on smaller sizes of galvanized piping, the scarcity being felt more particularly on these. As the demand is not very great at this season of the year it is thought that both manufacturers and jobbers will have a stock accumulated and prices will have a tendency to come down.

MR. W. J. McGUIRE DEAD AFTER SHORT ILLNESS

Toronto.—Following a short illness, W. J. McGuire died at his home, 13 Maple avenue. The late Mr. McGuire was born in Ireland in 1838 and came to Canada when very young. He was in business in this city about forty years, as plumbing and heating contractor, with branch offices in Montreal. He was predeceased by Mrs. McGuire about twenty years ago, and is now survived by two sons and two daughters. The late Mr. McGuire was known by a large circle of business acquaintances and was popular in many walks of life.

PLUMBING MATERIALS WANTED FOR SOUTH AMERICA

There is said to be an increasing demand for plumbing fixtures and appliances, including nickel-plated piping, wash-stands, and toilet ware, in Brazil, Chile, Bolivia, Colombia, Peru and

Uruguay. Before the war Germany conducted a successful trade in all kinds of plumbing materials in the above-named republics but since the war United States exporters made special efforts, and have developed an extensive business. There is, however, a favorable opportunity for British firms, by direct communication with those countries, and by close attention to local needs, to secure for themselves a considerable portion of the former German trade. The chief requirement is for British firms to realize that the principal merchants in the great South American republics are enterprising and solidly established business men, and that credit is therefore good.

Several of the larger cities in Brazil, especially the town of Santa Maria da Boccia de Monte, Rio Grande del Sul, and no fewer than fifteen cities and towns in Uruguay have decided to instal as soon as possible up-to-date water supply and drainage systems. It is understood that the respective municipal authorities would welcome proposals from British engineering and other firms which carry out such work.

Business Is Certain To Expand and Industry Will Be Quickened

Readjustment in Prices and Profits Now Going on in the Business and Industrial World
Furnishes No Justification for Pessimism

THE following extract from a general letter sent out to the sales force of a Canadian manufacturing concern, dealing with present conditions in Canada is interesting, illustrating an undivided faith in the future of Canada:—

"The readjustment in prices and profits now going on in the business and industrial world furnishes no justification for pessimism. There will be no prolonged depression. Just as soon as a stabilized basis is reached business is certain to expand and industry will be quickened. The great recession in prices and accompanying decrease in demand for goods is an inevitable aftermath of the war boom. The wonder is that it did not come sooner. Everybody knew it was coming. Some people prepared for it. Others went on as if the boom in business and the rise in prices would continue indefinitely.

Greater Than They Are

"The readjustment process has wiped out a good many hundred millions of 'paper profits' made in the war boom and has put merchants and producers in an uncomfortable position. The discomfort and distress, however, by contrast with the wild flights of war prices, seem greater than they are.

"There is no question that fundamental things in Canada are sound—in financing, in merchandising, in industry, in agriculture. The country is rich with accumulated war profits. The crops are abundant. The banks have been foresighted in avoiding the admission of doubtful securities to their assets. The factories are equipped better than ever before to meet the demands of the country. The average scale of living is higher than ever before, which means that potential demand for goods is enormous and the present lull in buying is only temporary.

Europe Coming Back

"Anyone who feels inclined to be discouraged over the present situation and disheartened over the future should compare this country's condition with Europe's. Canada accumulated a vast wealth in the war while Europe was exhausting its goods, its men and its financial resources; yet Europe is coming back marvellously, increasing its production, strengthening its finances, restoring its business stability. All the Canadian people have to do is to wait patiently for the completion of the readjustment and then be ready for the resumption of prosperity that is as certain to come as the succeeding seasons."

Allpriser

The Reliable Price Clerk

There are five very strong arguments why Allpriser should be your price clerk, why Allpriser is a vital necessity to the welfare of your business.

The Reasons Why

Here are five reasons that bring home convincingly the merits and business insurance of Allpriser—the reliable Price Clerk:

1. Allpriser prevents errors by giving accurate pricing.
2. Reduces overhead expenses by the money saved on mistakes.
3. Saves time and worry.
4. It makes estimating easy.
5. It is inexpensive.

Allpriser for 7 cents a day will insure your business against errors you make in the hurry of business worries. Allpriser Service consists of a flexible, leather bound book 7 by 9, of 150 loose-leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest change. Write to-day for more details.

JARDINE and TOLEDO PIPE-THREADING TOOLS

THE ratchet feature of Jardine and Toledo Tools permits their being used to thread pipe which is already in place, no matter how awkward it may be to reach. The Jardine and Toledo has no cams or gimcracks to get out of order; and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

"Toledo" Geared Adjustable Threading Tool,
No. 2½. Capacity 2½ to 6 in. inclusive.
Weight 120 lbs.

How to Test Advertising

THE man who doubts the power of advertising belongs in the same class with the man who refuses to believe that the world is round simply because he can't get off somewhere at a distance and see its roundness for himself.

The merchant who fears to attempt advertising because he figures it as an "expense" is blind to his own interests. I personally know several men who, because they once tried advertising to the extent of a cheaply printed hand-bill and didn't find it necessary next morning to call on the police to keep the crowds of eager buyers from swamping their store, loudly and solemnly aver that "advertising doesn't pay."

Advertising *does* pay.

The most successful merchants are the merchants who believe most thoroughly in advertising and who practice their belief.

But advertising, in order to pay, has got to be *intelligent* advertising.

The day of hashed-over superlatives—"best goods," "lowest prices," "best stock in town," "greatest bargains ever heard of," and so on—has passed.

People have learned to distinguish the *truthful* advertiser from the blatant behind-the-times storekeeper who believes that, so long as *he* claims to have the best goods on earth, or under the earth, or within wireless distance of the earth, people will break their necks trying to get to his counters in the forefront of the crowd.

Put some *brains* into your advertising.

Don't let the office boy write your announcements in between his other duties.

Don't doubt the business-getting and business-building power of intelligent and informative publicity—and you will find that advertising *does* pay.

—Jerome P. Fleishman.

$\frac{1}{8}$ " to 1" Ratchet.

Twenty years of successful experience and the organization developed in manufacturing have enabled this Company to produce a line of pipe-cutting and threading tools constructed to the interchangeable accuracy and close limits attained for the first time in Beavers.

Display the **STACK HEATER** *and Make Profitable Sales*

Stack Gas Water Heater has many powerful selling points. It saves gas, and gas saved is money saved.

The network of small pipes exposed to the hot gas flame will heat water quicker than one large pipe because of the greater heating surface offered. Heats water in a minute; show your prospect. No technical knowledge is necessary to see the advantage of the Stack Heater.

Send for a Stack Heater Display Card

Do You Read These Advertisements?

Every advertisement in this magazine is worth reading. It is the product of some concern that is using a modern piece of selling machinery—technical paper advertising—to present most effectively to you the leading features of its line.

These advertisers are making it easier for you to buy intelligently with the least waste of your time and theirs. They realize that a sales force can not replace this service at equal cost. They know that advertising is good business, for the manufacturer who does not advertise cannot save the cost of advertising. Consistent advertisers are progressive merchandisers. They are saving your money and their own; and it pays to do business with them.

Don't miss your opportunities. These advertisements are interesting. Some are distinctly instructive, and a glance through them every month will keep you posted on the latest developments in Sanitary Engineer.

A VALVE for EVERY SERVICE

Fig. 106

JENKINS BRASS GLOBE VALVE

Suitable for 175 lbs. working steam pressure or 250 lbs. working water pressure.

JENKINS VALVES

for Plumbing and Heating Service

In all types and sizes—every one made to stand the severest conditions possible.

Dependability is built into every Jenkins Valve. In their manufacture the best grade of metal is used and their design provides more metal at points where the pressure and strain is greatest.

Genuine Jenkins Radiator Valves are built with the Jenkins Renewable Composition Disc, giving them practically limitless life.

Catalog No. 8 describes the complete Jenkins line. Write for free copy.

KING HOT WATER ***BOILERS*** AND ***IMPERIAL RADIATORS***

Steady Heat at Low Cost

There is no come-back when you install King Boilers and Imperial Radiators. Together they form the perfect heating system. With fuel high and hard to get and a long winter ahead you can win the gratitude of every household where you install the King Boiler.

Positive Circulators

By using a Positive Circulator, a hot water heating system can be installed for about the same price as steam, on account of the large reduction in radiation and pipe sizes required, as compared with gravity hot water. The Circulator is driven by an electric motor, operated by an ordinary switch.

The Positive Circulators operate quietly and are now in use in such buildings as churches and apartment houses, giving satisfaction without noise.

Clears Clogged and Frozen Pipes

That's Why It Sells

Desolvo thaws frozen pipes because when mixed with cold water it creates heat in addition to its own action. It clears clogged pipes easily and without the aggravating and expensive tearing up of house and grounds. It has many points of appeal to customers, pays a good profit and sells easily and often.

The DUNHAM
HEATING SERVICE

Every Dunham Trap Is TESTED

Every Dunham Radiator Trap is permanently adjusted at the factory. It never needs attention in service when used within the range of pressure for which it was designed. Dunham Traps are "set by test." Preliminary setting is made with precision tools and gauges to a hair line. Then, **after that**, each individual trap is tested as illustrated to prove that it opens for air and water but closes tight against steam.

There is nothing uncertain, variable or weak about the motive force in a Dunham Radiator Trap. When steam

Setting the disc with hair-line accuracy. This adjustment is permanent.

comes into contact with the thermostatic disc, it closes positively with a pressure of 14 pounds against the steam.

There is a Dunham Trap for every need. Full details of all Dunham Specialties will be found in Special Bulletins, covering each of the Dunham Specialties. Write for the one you wish.

This is a
“Q”
 Foot Valve

And it Just **CAN'T** Leak

There are more pump troubles caused by “leaky” valves than from all the wear and tear which occurs in the average life of a pump.

The “Q” valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that **JUST CAN'T LEAK.**

Made in sizes from 1 to 8-inch.

THE old style side arm combination was as inefficient as candle light. It was awkward, a gas-eater, slow, heated more air than water, and, like the candle, it has given place to the new and better way.

is delivered on the job completely assembled, and, with the addition of a single gas connection, is as quickly and easily installed as an ordinary range boiler.

It heats water quickly, with little gas. Is odorless, silent, safe. Brings back no complaints, avoids adjustment losses.

Made of extra heavy material. In all sizes. Tested to 150 pounds under working pressure, and guaranteed for two years. It's the best non-automatic water heater made. Write direct, or to your jobber, for prices and literature.

VitrO Profits and VitrO Tanks are Inseparable

THE VitrO Tank has brought lasting satisfaction to thousands of owners and thousands of dollars to Canadian plumbers, because—

The VitrO is a “No Trouble” Tank—made from start to finish, inside and out, to eliminate trouble for the customer and for the plumber.

VitrO is the name of a complete tank—fittings included—not merely the material from which the tank is made.

It is a name that has earned public confidence because it has set a standard for tank buying. It is a name that represents a larger profit to the plumber because a VitrO Tank does not need “fixing.”

In all your jobs, make your aim the satisfaction of the buyer and of yourself, and your choice will be, invariably, the VitrO “No Trouble” Tank.

The SPENCER SELF-FEED BOILER

WHY A SPENCER?

SOME of the REASONS—

1st.—Every Owner of a Spencer Self-Feeding Boiler saves from THREE to FIVE Dollars on every ton of coal required to heat his premises, and is DELIGHTED with the constant service he receives from the Boiler with so little attention.

2nd.—This small-sized No. 1 buckwheat coal, which the Spencer burns successfully, is always available. The only other known types of boilers that will burn it are the mechanically-equipped boilers, and many factories are now equipping their boilers to burn coal in a powdered condition. Of course the Spencer will successfully burn fuel in the larger sizes.

3rd.—The magazine of the Spencer holds a 24-hour supply of fuel. The fuel feeds at a tempered condition in thin fires over the arched grates in exact proportion as the fuel is consumed, thus eliminating waste and allowing perfect control of firing conditions.

4th.—Spencer Boilers are known to maintain temperatures for a period of 48 hours in the coldest weather without attention.

HOUSE SIZE

THOUSANDS of Spencer Boilers are now in operation in various parts of Canada and the United States. We can refer you to almost every known type of building where Spencers are successfully operating. We manufacture in Canada the Spencer Cast Iron Sectional type of Boilers in ten different sizes ranging in capacity from 600 square feet to 3,600 square feet, and the Spencer for steam is of fire and water-tube steel construction, ranging in capacity from 1,000 to 10,000 square feet, there being twenty sizes.

Let us co-operate with you on the sales in your district. There is a SPENCER for every heating requirement.

Give us your address—NOW.

Safeguard Your Reputation

Install the Best

Your customer must be satisfied if your business is to grow. Heating system costs money now and you should be careful to install only King Boilers and Imperial Radiators—The system that satisfies.

KING HOT WATER ***BOILERS*** ***AND*** ***IMPERIAL RADIATORS***

Don't be tempted to substitute inferior boilers for the sake of a few dollars—you'll lose in the end. The low consumption of coal, together with the ability to heat every corner in every room, has made the King Boiler a general favorite. Recommend this perfect heating system to your customers.

Investigate!

This is a Furnace

NOTHING more—to the casual observer, than a furnace.

But to you—with your trained experience—that fireman is feeding coal to boilers to send water or steam into a vast *system* of pipes—whose joints, elbows, unions, are all joined with innumerable threads.

To *your* mind's eye, every apartment or office building represents a *big plumbing job*. It has been a contract worth getting—that required men, and skill, and tools to finish.

The big job usually shows *your* trade at its best. It means good work—above the average—men who know—and tools that can be trusted.

Above all—good tools. Think as you grow older in the business, of the old-time delays—the jams, the botches, that good tools have done away with.

You can still thread a single pipe with any old worn-out tool from any workingman's kit—and hundreds of workmen still use them.

But when you tackle the big job—with the profit and the reputation in it, don't begin it without first making sure that your tools are **GTD**—the modern kind. The **GTD** Receder will quadruple production. The "*Trio*" Die stock will triple the value of any man's time. These are not extravagant claims—for thousands of master plumbers are saying so every day.

Let us tell you about the **GTD** Receder, "*Trio*" Die Stock, the **GTD** Pipe Wrench, and other **GTD** specialties. The coupon brings special circulars about each one.

Electric Weld

RANGE BOILERS

Standard Size—For New Work or Replacement

In Electric Weld Quality Range Boilers there are no rivets to leak; no punched or drilled holes to weaken the shell.

The strength of a boiler lies in the thickness of the shell and the character of the seams. In the Electric Weld Boiler the full strength of the shell is retained. The electric weld practically ceases to be a seam as it is 96 per cent. efficient—a higher efficiency than any other character of seam. There is complete strength in the electric weld.

"JARDINE" and "TOLEDO" Pipe-Threading Tools

Interesting Features

The Jardine and Toledo have no cams or gimcracks to get out of order, and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

By Booster Biny

THE reason I ask this particular question is because you have a funny way of looking every time I give you a rating on any of our boilers.

As near as I can figure out, you seem to think that we rate them on what the other fellow's boiler is **rated to do**, rather than on what our boilers have **actually done**.

If what you intimate as so, really was so, then I am sure that room won't be air cooled. In fact all the drafts in the furnace will be on.

But, knowing as I do know, that when we say our boilers are rated to do a certain thing, they are rated to do it. Rated to do it because they have done it and are doing it. Which fact being so, it looks as if after all the drafts would be turned off and all the electric fans would be running in that room.

Do You Think There Is Going To Be a Special Air Cooled Room For Boiler Makers In Heaven?

When you figure a Burnham's grate surface you figure how much actual surface there is on the grate, not how wide the ash pit is from the outside. Which is exactly the way we measure it.

A Changed Attitude re Tinsmiths

In Face of the Imminence of a Test Case Government Officials Now Inclined to Class Tinsmiths as Contractors, the Latter Categorized as Retailers—Have Turned Back Some Applications for Manufacturers' Licenses—What of Passenger Automobiles Converted Into Trucks?

THOUGH the test case to be instituted by the retail merchants to establish the liability for taxation of the merchant operating a tinshop has not yet been heard, there is evident a more sympathetic attitude on the part of Government officials toward the retailers in this and other points of contention.

Until now the stand has been taken by representatives of the Inland Revenue Department that those merchants operating tinshops, and tinsmiths themselves, are for the purposes of taxation classed as manufacturers if they make anything from a tin cup to an eavestrough. The point was protested by those merchants and the trade press but the Government stood fast. Deputy Minister of Inland Revenue Taylor was quoted as having stated to the Retail Merchants' Association that no prosecutions would be made of merchants operating tinshops who failed to take out manufacturers' licenses and collect sales tax, pending the outcome of the test case; but nevertheless the ruling given distinctly provided that such merchants were manufacturers and liable as such. And though some merchants may have decided to take a chance awaiting the results of the test case, no doubt the majority hastened to take out manufacturers' licenses.

Definitely Classified as Manufacturers

It was just recently that a ruling was forthcoming that blacksmiths were to be regarded as retailers for the purpose of taxation, but the tinsmith was again distinctly classified as a manufacturer. As a matter of fact, following is the official advice from Ottawa dealing with this matter:—

"Memo 36B to Collectors of Inland Revenue, dated January 19th, 1921:—

"Sir:—You are informed that bona fide blacksmiths are classed as retailers and as such they will not be required to obtain sales tax license nor will they be held responsible for the collection of sales tax.

"Tinsmiths are held to be manufacturers. They must, therefore, operate under a sales tax license and collect sales tax upon sales of their finished product."

The Soft Pedal

But now comes the soft pedal.

Putting the matter squarely up to the Government officials, as to the difference between a blacksmith and a tinsmith, and as to why either should ever have been classed as manufacturers, it was stated to Sanitary Engineer by two of the head officials of the Toronto branch of the Inland Revenue Department that the question of liability of tinsmiths as manufacturers was to be largely determined by the extent of the manufacturing done. Meanwhile a new category is being found for tinsmiths under the heading of "contractors," which it happens, are classed as retailers.

Deal Direct With Consumer

"Tinsmiths as a rule who merely make a few stove or furnace pipes, eavestrough, etc., are really dealing direct with the consumer and make the majority of these lines for jobs which have been contracted for," was the admission of one of these officials who agreed that under the circumstances such tinsmiths should be eliminated from the category of manufacturers.

It was further stated to Sanitary Engineer that some recent applications for manufacturers' licenses on the part of this trade had been turned back on this basis.

Confirmation of this stand was secured when a letter to Sanitary Engineer from a merchant in Fort William, Ont., asking if the operation of a tinshop in which stove pipes are made, repair work conducted, and occasional pans and cans are manufactured to order, would make him liable as a manufacturer and liable to collect sales tax on such articles. It was advised by the Toronto official that this merchant would not be classed as a manufacturer if the percentage of manufacturing to retail business was not too great, thus indicating that he was only manufacturing articles for his own use on jobs contracted for. No definite percentages are laid down but this is left for decision by the nearest collector of Inland Revenue.

This action of the Government in altering the policy so as to interpret the spirit rather than the

Continued on next page

All Plumbers Should Share This Tax

Calgary Plumbers Ask Licenses For All Operators—Only Few Plumbers Are Paying Business Tax

CALGARY, Alta.—Demanding that all persons doing any plumbing and heating work "pay their share of this tax"—the business tax—the Calgary Association of Sanitary and Heating Engineers has submitted a letter to the council.

Among other things the letter says:

"In view of the fact that you have found it necessary to increase the business tax, we wish to point out that there are only a limited number of the plumbing and heating contractors within the city who have been paying this assessment and we would suggest that the needed revenue be procured by requiring all parties doing this class of work to pay their share of this tax.

"We would further draw your attention to another unfair condition, viz., the existing plumbing by-law allows any

person or firm from outside the city to take a contract within the city limits, and by employing a journeyman plumber, holding a license for which he pays \$1, complies with all requirements and is, regardless of the amount of contract, enabled to depart after completing the work, and does not pay any business tax.

"This condition creates a hardship on the parties who maintain a bona fide plumbing and heating establishment, which is at the service of the public, and from whom you require both license and a business tax. On Nov. 19, 1920, a letter together with a copy of a proposed change in the by-law, which we think could overcome this difficulty and give the public far greater protection, was sent to your honorable body, but at the present writing no acknowledgment has been received."

Doings Among Montreal Plumbers

FIRST ANNUAL COMPETITION FOR SILVER TROPHY

Montreal.—Montreal plumbers recently engaged in their first annual competition for the trophy which has been presented to the plumbers of Montreal and vicinity by the Good Manufacturing Company.

The trophy is a handsomely mounted cup, with appropriate shields to carry the names of the winners of each year. It will be played for during three consecutive years, and will be kept in trust by the Master Plumbers' Association until the third year's contest has been decided. Four rinks took part in the last match, and after two closely contested rounds, Skip Jas. Griffin laid claim to the cup for the current year, defeating J. Ballantyne in the final by five up. Rinks were as follows:

First Round

F. Latourelle	J. W. Teskey
J. M. Bethune	W. J. Bethune
R. Darling	J. A. Gordon
J. Ballantyne, sk. 14.	Jas. Buchan, sk. 6
G. Delaney	J. Belisle
W. Hughes	Thos. Bain
J. Watson	M. J. Quigley
J. Griffin, sk. 10.	D. A. Bethune, sk. 8

Final

J. Griffin, sk. 12.	J. Ballantyne, sk. 7
---------------------	----------------------

THOS. ROBERTSON CO. OPEN NEW SHOWROOM

Montreal.—Thos. Robertson & Co., Ltd., 134 Craig St. West, have recently opened their new sample and show room.

A CHANGED ATTITUDE

(Continued from page 13)

letter of the Act will be appreciated by tinsmiths even though the move is belated. As far as refund is concerned, Mr. Taylor, Deputy Minister of Inland Revenue, has been quoted as stating that refund of the license fee and of the tax collected would be made if the point was not upheld.

Autos for Commercial Use

Dealing with applications for refund of excise tax paid upon autos in consequence of their having been converted into commercial vehicles a Governmental communication has the following to say: "It will be necessary that the usual documents in support of the claim be supplemented by a sworn declaration from the purchaser of the converted vehicle stating that said car will not be re-converted for passenger use and that the commercial body will not be removed from the chassis. Application for refund must be submitted on form C-15 supported by documentary proofs.

WATER DISTRIBUTION IN SASKATCHEWAN

Moose Jaw.—The Saskatchewan Water Supply Commission has recommended taking some 12,000,000 gallons per day from the river near Riverhurst, filtering it and pumping it to a reservoir near Gilroy, thence distributing it through pipe lines running through Gilroy, Lawson, Eyebrow, Brownlee, Keeler, Marquis, Tuxford and Belbeck to Moose Jaw. A branch line from Moose Jaw will run straight east to Regina, from which branches may be put in to Belle Plaine, Pense, Grand Coulee, Eastview, Stony Beach, Keystone, etc., and provision is made whereby the distribution system may be further expanded to take in towns on the Soo Line as far east as Yellow Grass, and to sections of the farming districts which are in need of water and desire it.

Reservoirs to store 100,000,000 gallons in all will be located at Gilroy, Eyebrow, Belbeck and at King's Reservoir, near Regina's present sources of supply from Boggy Creek.

The chairman of the Saskatchewan Water Supply Commission has announced in his report to the provincial government that in the proposed district each of the cities and railways have about sufficient supplies for their present needs, but will want more if any expansion takes place. Moreover, the railways and all industrial plants would find it a great advantage and saving if the water of better quality from the river were available. Many of the towns are very anxious to have their water problems solved and large sections of the farming community are in great need of water and are prepared to spend large amounts to secure a permanent supply of good water.

OBITUARY

Montreal.—Announcement is made of the death of Ernest Prudhomme, son of A. Prudhomme, president A. Prudhomme & Fils, Ltd., Montreal, jobbers of hardware and plumbers' supplies.

Although only 21 years of age, Mr. Prudhomme, at time of death, was a director of the firm, taking an active part in all business transactions. He joined with his father 5 years ago, having previously studied at Mount St. Louis, Montreal.

Mr. Prudhomme was married last September, and is survived by his young wife. Remains were interred last Tuesday, February 8th.

PERSONAL

Montreal.—A. Valiquette is calling on the plumbing and retail trade of Montreal for the Canada Metal Co., Ltd. Mr. Valiquette has previously held an important inside position in the Montreal branch.

Heating and Ventilating

Combination Heating Systems

Third article of an important series written exclusively for Sanitary Engineer by
N. A. Kearns

Continued from last issue

The Location of the Furnace

The size of the furnace required has been decided. It now remains for us to fix the most suitable position for this furnace.

Warm air furnaces are, as a rule, placed as nearly as may be possible in a position corresponding to the centre of the plan. In some cases furnaces are placed off-centre, so that the pipes leading to the rooms with the greatest exposures may have the shortest runs.

Before deciding upon the exact location for the furnace we must decide where the warm air registers are to be placed. Further on in this article we shall take up the location of the registers; but for the time being we shall consider that we have already decided where the registers are situated and will go on with our method of determining the location of the furnace.

In setting the furnace we should bear in mind that uniform heating depends not so much on the actual size of pipes as it does on their relative sizes. The best results are not obtained by using

the same size of pipes for the same size of rooms, but, rather, by proportioning the pipes and registers with regard to the exposures of the rooms and to the length of the pipes. The registers with north or west exposures should, if possible, be a little closer to the furnace than are those which are toward the east or south.

After we have decided upon the positions for stacks and registers we decide upon the exact location for the furnace. All other things being equal, the furnace should be set so that there will be an almost equal length of run in the pipes leading to the furthestmost stacks.

The centre of the plan of the stacks is not the centre of the plan of the basement. Therefore we must decide to place the furnace toward the rear of the building.

The furnace cannot be set at an equal distance from all of the stacks, nor can it be set in the best position. A brick pier stands in the way. There remains a choice of two locations: one to the east and one to the west of the brick

pier. Now, because it is considered to be good practice to set the furnace toward the exposed part of the building we shall place the furnace to the west side of the pier.

The dotted lines indicate the first and approximate location of the furnace; the full lines indicate the final and exact location.

The Registers

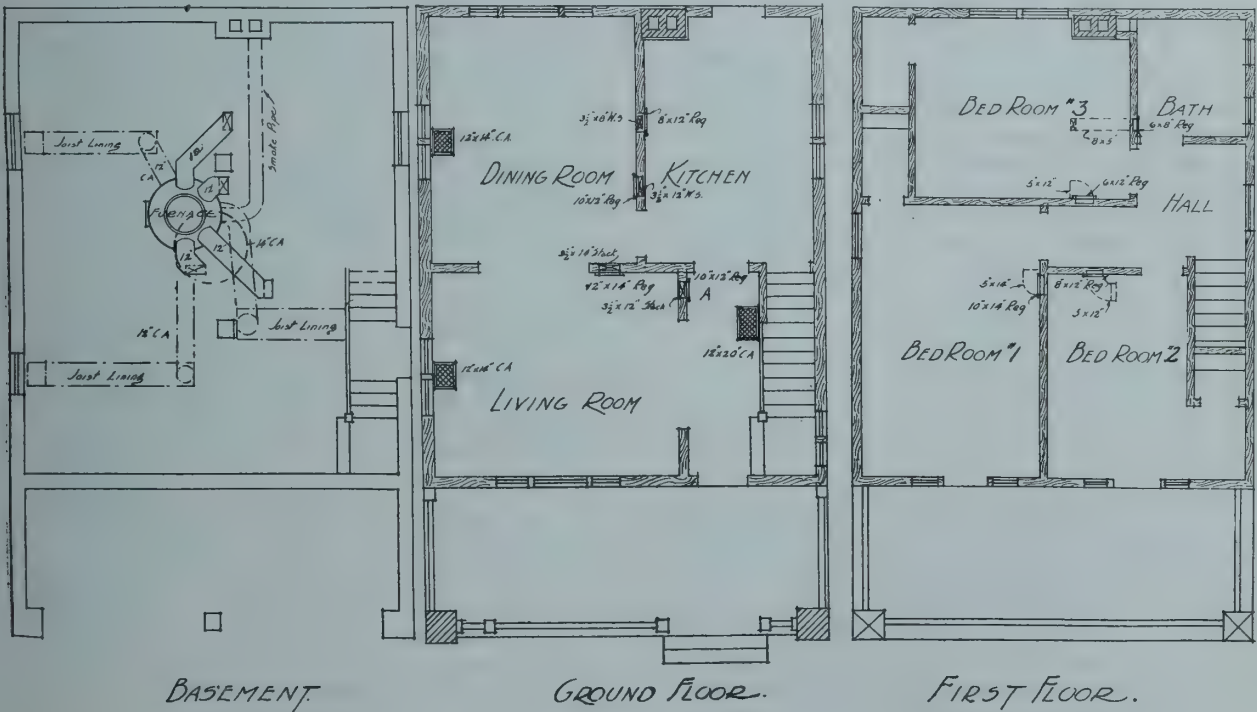

The hall register is the first one for our consideration.

Hall registers are often placed in the floor, but because register boxes, when placed thus, frequently become receptacles for sweepings, we shall not make use of floor registers when we may avoid doing so.

We find that a register may be placed at point "A," and as this position is close to the furnace we decide to place a register there.

In deciding on the proposed locations for the ground floor registers we must consider the requirements for the upper floors.

The upper floor registers are in this case to be supplied with warm air by way of wall stacks. Very often it may be found that the wall stacks can be

conveniently connected to the pipes feeding the registers on the ground floor. In fact, it is much better to arrange the work in this way than in that way when two registers on the same floor are fed from the one stack or pipe.

The register in bedroom No. 2 may be fed by the pipe which connects to the hall register. In a like manner bedroom No. 1 has a common pipe with the living room; the kitchen with the bathroom, and the dining room with bedroom No. 3.

A Double Header

A few dollars might be saved by connecting a single stack to the registers in bedrooms Nos. 1 and 2. In such a case the registers would be set back to back. The dampers or vanes of both registers could not be thrown open to their full capacities at the same time. Furthermore, if both registers should be open at the same time there would be a certainty that the stack would deliver an excess of air to the room on the lee side of the building and at the expense of the room on the windward side.

Although this practice of connecting a wall stack to registers on the opposite sides of a partition is a common one, it is, nevertheless, incorrect. It should not be resorted to unless the wall stack is made unusually large and is fitted with division plates.

Pipe Sizes

The warm air pipes in the basement are generally referred to as "leaders."

The location and length of a leader must be considered by the engineer when he is deciding upon its required area.

The pipes leading to registers on the first floor should be a little smaller than those leading to ground floor registers.

The wall stacks should be placed as near to the furnace as may be practicable. The registers should be set close to the stacks and not placed near windows, nor close to an open fireplace.

A pipe leading to a register on the first floor may be three-quarters the area of a pipe leading to a similar room on the ground floor. A pipe leading to a register on the second floor may be one-half of the area of a pipe leading to a like room on the ground floor.

All offsets in piping must be considered, and the pipe sizes must be increased to make up for the friction occasioned by such offsets.

Rule of Areas

It is possible to make scientific rules based on the known behaviour of air in a gravity system of heating. But the description of how these rules are made would take up more space than we have now at our disposal. In addition to this reason for the omission of such rules from this article there is the greater reason that such rules are hard to remember, and serve no better purpose

than the rule that we are now about to present.

This rule provides for the heat loss that may arise through special requirements of ventilation, or any other heat loss in addition to that occasioned by the more common one of exposures, etc. The rule is:—

To find the required area of a leader in inches: Divide the heat loss by 150.

Another rule which, in many cases, will give a similar result is that where the cubic content is divided by 100, the wall by 10, and the glass area by 1. These divisions should be made in feet. The answer will be the required area in square inches.

An Example

As an example of this method of determining the required area of leader pipes we shall use it in deciding upon the required pipe area for the leader feeding the living room and bedroom No. 1.

Referring back to the first article of this series we find that the heat loss from the living room is equal to 13,120 B.t.u. per hour.

Dividing the heat loss by the factor of 150 gives a figure of 88 square

inches for the required area of the pipe feeding the living room register.

If we use the rule of 100, 10 and 1 we find that the required area is 90 square inches.

The heat loss from bedroom No. 1 is 9,300 B.t.u. per hour. If these figures are divided by 150 the result is 60 square inches. If the other rule is used we find that 55 square inches appear to be enough. But because this room is on the first floor we need only supply an area of 75 per cent. of either of these figures. We shall, therefore, consider that the area of pipe required for this register is 41 square inches.

Adding the figure of 41 to that of 88 shows us that a total area of 129 inches is required.

One area of a 12-inch pipe is only 113 square inches; of a 14-inch pipe it is 153 square inches. This leader has a very short run, so we decide to use the 12-inch pipe.

Areas of Registers

The effective area of a register is only two-thirds of its actual area; about one-third must be deducted because of the grills.

(To be continued)

QUESTIONS AND ANSWERS

Question.—We have a ninety-gallon range boiler tied up to a McClary hotel range and it does not heat. We would like to have your opinion on it. It has a straight water front and tied up with one-inch pipe from the boiler and the lower pipe is straight in from the lower connection, which takes about eighteen inches in all. The water will get warm after fire is made four or five hours but it will not get hot. The water is just about right for bathing without adding any cold water to it. All pipe and connections from front to boiler are a full inch and connections from top of boiler are three-quarters of an inch. Can you give us any cause why it will not heat as we have done all we can? We have even tried to heat the boiler by taking a hot line from the top with three-quarter pipe and plugging off the side but that made it worse.

BAILEY & KAULBACH BROS.,
Bridgewater, N.S.

Answer.—It would appear from the description you give of your difficulties in securing an adequate supply of hot water that the water front in the range is too small for the 90-gallon tank with which it is connected.

In installations of domestic hot-water supply systems the circumstances vary so much that it is rather difficult for anyone to give hard and fast rules that could be used in every case. The quantity of water used and the time required in heating it must be considered. As a general rule a water front with a sur-

face of 100 inches exposed to the fire will serve for a 40-gallon boiler. For a 90-gallon boiler the heating surface of the water front should be 225 square inches.

We do not think that any of the trouble is due to faulty circulation; however, if you should find that the water front has 225 square inches of external heating surface it might be well to examine the tank to see if the cold water supply pipe is not broken off, and that it runs down within the boiler to a point about three inches above the level of the top of the water front.

* * *

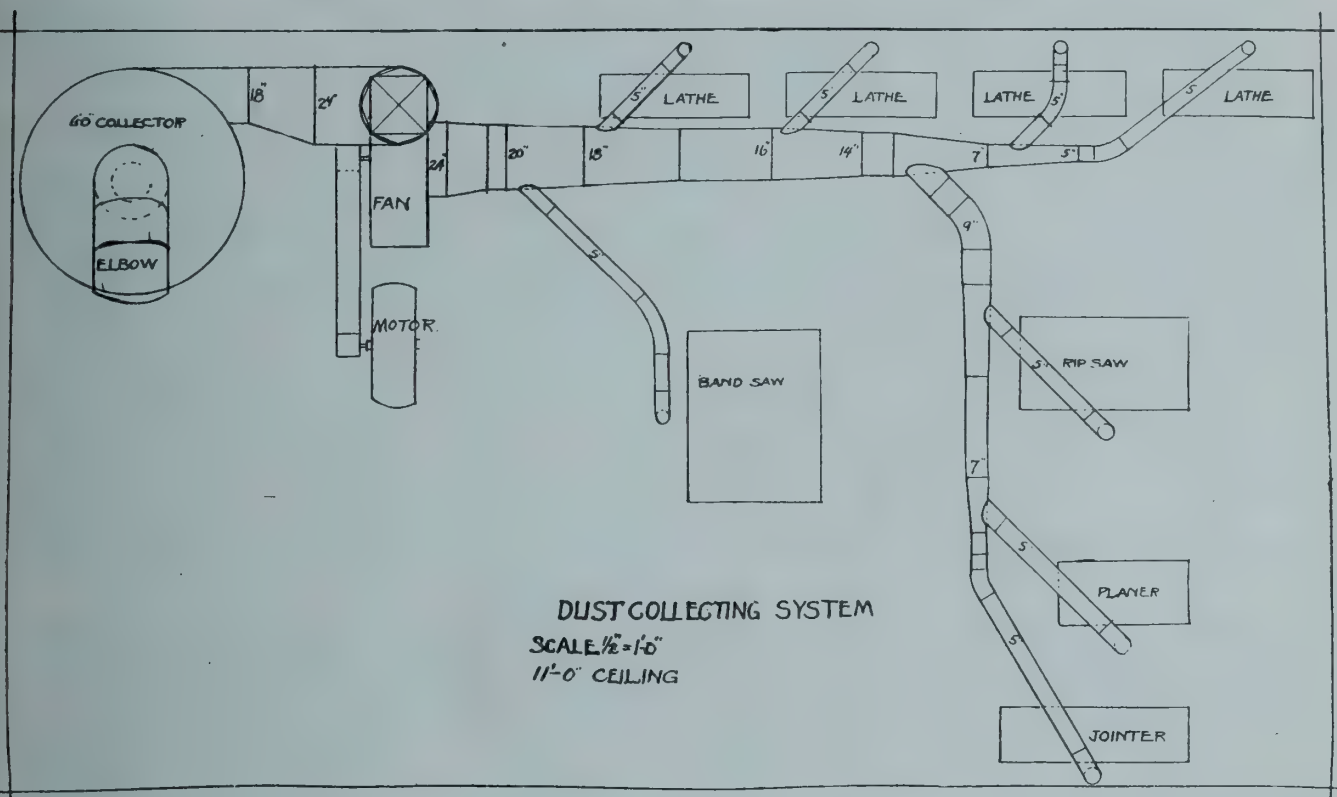

(Question.)—Can you give me the cause and cure for sweating stove pipes. There seems to be a thick syrup-like liquid trickling through joints of pipes and the owner claims he is burning dry wood.—W. Walters, Yorkton, Sask.

(Answer.)—The reason of the leakage of liquid through the joints of the smoke-pipe is that a downward current of cold air is condensing certain vapors which arise from a smoldering wood fire. A downward current of cold air may occur when the fire is checked in a way that will prevent any air entering the fire pot save by way of the chimney; or a downward current of air may come by reason of the flue not being of sufficient height. If your client is using an air-tight stove you should advise him to use an open damper in the smoke-pipe for the purpose of checking the fire.

DUST COLLECTING SYSTEM

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri.

DUST COLLECTING SYSTEM
SCALE $\frac{1}{2}'' = 1'-0''$
11'-0" CEILING

BLOW pipe jobs are becoming more numerous every year. Each factory requires a design of system all its own. This requires considerable originality, although it is merely piping.

The man who must install these systems must be an able workman who understands design as well as erecting.

Then on all these jobs there are always numerous patterns to lay out that are of interest.

In this case we have fan run by motor. The fan has a 24" opening and is of ample size for the machines. The larger fan is no doubt selected to enable enlarging the system, by setting in other machines.

It is always better to have a fan larger than required as a small fan must be crowded and this is not good practice.

A larger fan is geared down, thus running smoother with less speed and handles the work more positively.

To determine the volume and velocity of air which a fan exhausts is done by means of a meter to measure the number of revolutions of fan per minute. Then the diameter of fan wheel and width and depth and number of blades are figured. This is not an easy problem for the layman mechanic.

So the best way to know the volume and velocity is to find the number of revolutions the fan makes per minute.

Then take the manufacturer's catalogue that made this fan and look up tables. Find the number of fan, or diameter of wheel, etc., and check table with revolution per minute and you have your data.

A few tests this way will soon acquaint the workman with speeds, volume and velocity.

The designing of the pipes is more of a matter of making the pipes of a size to carry the substance. Too large a pipe is not good as too great a waste in power is produced.

Most machines according to size are piped with 4" to 7" pipes. In this case we have 5" pipes. Each branch pipe causes an enlargement of the main suction line.

In this way the main suction line is made large enough to accommodate the full area of the branch pipes. Just where and how these branch pipes must run into the main line is governed by the settings of the machines.

But the branch pipes should not enter the main at less than a 45 degree angle. All pipes should be riveted every 2½ to 3" apart and the seams skimmed with solder.

Heating Engineers' Uniform Contracting Form

Experience of Many Well-known Men in Heating Industry Reflected in This Uniform Contracting Plan—Eliminate Firm Name From the Form—Conditions Printed on Reverse Side—Standard Form is Most Acceptable

ON the opposite page is found a uniform contract form for heating contracts, as suggested by well-known men in the heating industry. This form carries with it all of the conditions and is recommended as adopted by the Heating and Piping Contractors' National Association. Much credit is due that organization for the major portion of the conditions and terms included in the contract form as shown.

This form is being recommended by the U. S. Trade Extension Bureau, an added recommendation being that overprinting on these contracts be eliminated. The opinion is expressed that the heating contractor will have less difficulty in getting signatures to this contract if his own name or his firm's name is eliminated from the top.

Printed in the form recommended, the heading would indicate that it is a uniform contract form adopted by a national organization and by using a uniform contract of this character the average buyer will take it for granted that all of the conditions printed on the back of the contract are standard conditions and therefore accept them without argument.

Following are the conditions, printed in small type, on the reverse side of the form:

Standard Conditions for Steam, Hot Water and Better Heating Installations

No. 1. Payments are to be made monthly on a basis of 90 per cent. of the value of labor and materials furnished during the preceding thirty days. The remaining 10 per cent. to be paid on completion of the contract.

No. 2. It is expressly stipulated and agreed that the contractor shall not be liable for any delays occasioned by the acts of the elements, strikes, fires, inclemency of the weather, the acts of other contractors, or any other causes beyond his control.

No. 3. The owner or agent shall provide sufficient space on the premises where this contract is to be executed for the storage of the material and the proper prosecution of the work.

No. 4. All material and labor required to complete the work and not included in this proposal shall be furnished by the owner or his agent in such manner as not to delay the progress of the work.

No. 5. Unless otherwise provided for, the contractor shall do all cutting through walls or floors for the installation of this work and finishing around same after work is completed.

No. 6. The contractor will guarantee the installation against original defects of material and workmanship for a period of one year from the date when the heating plant is ready for practical use. The contractor agrees to replace without expense to the owner, except transportation and board for men, any part requiring replacement within the period stated above, due to inherent defects of material and workmanship. Be

it understood that the contractor will not under any condition pay for any labor or material, or any defect other than repaired by his own men. The liability of this matter extends only to the labor and material furnished by the contractor and does not cover any contingent liability either to buildings, contents, products or persons.

No. 7. If the work covered by this proposal includes the installation of material and apparatus under specifications made by others, the performance liability is not assumed by the contractor. Should the contractor guarantee temperatures or operation of this system and tests be required, such tests shall be made by the contractor under standards established by the American Society of Heating and Ventilating Engineers.

No. 8. If upon completion of the work covered by this proposal, weather or other conditions over which the contractor has no control, do not permit of a proper test, this shall not be considered a sufficient reason for withholding payment.

No. 9. This proposal is based on the prevailing rate of wages and the execution of the work during regular working hours.

No. 10. It is hereby expressly provided that the title to the material to be furnished by the contractor under this proposal, shall be and remain in the contractor until all sum or sums of money called for in this proposal, and required to be paid by the owner, are fully paid the contractor in legal tender of the United States; and that until said sums of money are so paid, said material shall be, and by the signing of the acceptance hereof, it is agreed that they shall be and remain personal and moveable property in whatever manner they may be annexed to realty and that in case of default in the payment of any of the instalments provided for in this proposal, the contractor is hereby authorized to enter upon said premises and to take possession of and remove said material at any time and that in such event, the contractor shall have the right to retain as rental for the use of said material, any sum or sums of money that may have been paid by the owner; and that all expenses incurred by the contractor by litigation arising out of and caused by failure to make the payments as herein provided for, shall be paid by the owner.

No. 11. Water supply connection for feeding heating plant, unless especially mentioned in the specifications as a part of the contractor's work, shall be supplied by the owner at his expense.

No. 12. Sewerage or blow-off connections for the heating plant, unless especially mentioned in the specifications as a part of the contractor's work, shall be supplied by the owner at his expense.

No. 13. Service pipes, returns and air lines from central heating mains in street to point where same enter basement will be treated as an extra unless especially mentioned in the specifications as a part of the contractor's work.

No. 14. The owner shall furnish and deliver in furnace room all fuel required to test the apparatus, if such test is required.

No. 15. The signer of the acceptance hereof hereby acknowledges that he or she is the sole owner of the property in which this contract is to be executed, or that he or she has been authorized to sign same for all parties interested in the property; and he or she further declares that the property is and shall remain free from mort-

gages or other encumbrances that can affect the carrying out of the conditions herein set out.

No. 16. Should the owner or his agents, contractors or others acting under them, desire to use any part of the apparatus covered by this proposal prior to the acceptance, permission is hereby granted upon the following conditions:

That the apparatus is to be operated entirely at the owner's risk and expense, and delivered to the contractor again in as good a condition as found. If the apparatus is required for temporary heating, an additional charge will be made for any extra material that may be required or labor required in connecting and disconnecting radiators.

No. 17. The owner shall provide a chimney of proper dimensions and draft for the apparatus proposed herewith.

No. 18. Any dispute arising under a contract based on this proposal that is not settled within thirty (30) days, shall be referred to two arbitrators, one selected by each party to the contract. Should they be unable to agree, they shall select a third arbitrator. The decision of a majority of these arbitrators must be given within sixty (60) days from the date of reference, and shall be binding on both parties to the contract; one-half the cost of arbitration to be paid by each party to the contract.

No. 19. It is further agreed that in case there is an advance or decline in the price of labor by reason of labor conditions covering the territory in which the building is located and which are beyond the control of the contractor, then the amount to be paid under this contract shall be increased or decreased accordingly.

THE ONTARIO PLUMBING REGULATIONS

London, Ont.—The claim that plumbing installations should be inspected and controlled by the municipal department of building inspection instead of by the health authorities was advanced by Chairman Dr. O. I. Cunningham and members of London Board of Health in conference with Dr. F. C. Dallyn, provincial sanitary inspector. The London members contended that modern health authorities agree that sewer gas is only a nuisance and not a disease carrier. The provincial plumbing regulations, which have not been finally approved, are alleged to be beyond the powers of the health authorities. On the ground that they establish a control of the trade of the plumbers to the exclusion of all others, intricate ventilation systems and other requirements, Dr. Cunningham told the provincial officer, needlessly mulct the owner for the benefit of the plumbing contractors. Dr. Dallyn expressed himself as favorably impressed with the London board's contentions, but did not commit himself until the matter was dealt with by the provincial authorities.

.....

EDITORIAL COMMENT

BRIEFS

APPARENTLY the prestige which goes with civic honors is not the business-getting sort for plumbers, judging by the experience of the Mayor of Mimico, Ont., who, because he is mayor of the town, is prevented from taking up a local plumbing contract for school work.

* * *

MUCH talk is heard these days of making the best use of every selling help because salesmanship is more required today than for some years. The plumbing and heating contractor is inclined to think himself outside the range of those to whom this argument is addressed but such is not the case. The windows of the plumbing shop can be made just as attractive and as productive of business as any other trade. There are some good suggestions for trimming the plumbing show window in this issue.

DISTRIBUTE TAX ON PLUMBERS EVENLY

ONCE again comes the cry that only a limited number of plumbers are paying their share of the business tax. This time the protest is made by plumbers of Calgary. Recent increases in the assessment for business tax in most Canadian cities have made an adequate solution of this problem more to be desired than ever before. In the case of Calgary, another phase of this problem which has caused much unrest is the fact that under the existing plumbing by-law of that city any outside contractor can enter into a contract to do certain plumbing or heating work in the city and by employing a journeyman plumber holding a license for which he pays \$1, all the requirements of the by-law are met.

It is quite obvious that this plan would encourage competition from outside the city contractors, and would almost encourage city contractors to move outside the city and still retain their hold on local business in the manner outlined. They would then be free from the necessity of paying a city business tax. This principle is obviously unfair to city contractors. It is the latter operators who are of most value to the city for they help to build it up from a business standpoint and are looked upon as reputable members of the business community. Furthermore they represent the operators who are within easy reach in case of emergency calls, and as such they should certainly not be discriminated against in the manner outlined.

The difficulty could be overcome by a system of

licensing plumbing and heating contractors, without which they could not undertake work within the city limits. In taking out a license to do such work they would be liable to their share of business tax. This would make a more equitable distribution of the burden which now proves irksome in some cases and not adequate in others.

SELL WITH A CONSCIENCE

THE ASSOCIATED Advertising Clubs of the World have handed out some good, sound advice, some of which has previously been published, but is worth repeating at this time. Goods and services, states the Club, no longer sell themselves. They must be sold. Good salesmanship is the order of the day. It is a help-the-buyer kind. It puts Service on a par with Profit. Its aim is to attract buyers by making buying attractive. Merchants and all sellers are not merely getting business, they are building it on foundations of integrity. Just recently the president of a national business spent thousands of dollars to apologize to the public for misstatements in advertising published in hundreds of newspapers by his company. He said policies of truth telling and fair treatment must be maintained by his company at any cost because he valued the confidence of the public and the goodwill of his business too much to have it impaired by wrong practices.

Legitimate business believes in "playing fair" and "dealing square." It aims to safeguard the interests of the purchaser in all transactions. With the spirit of Service as a guiding force, business is worthy of your faith on which its activity relies. There is the hub of the whole matter.

Some say there has been a breaking down of faith by the recent scramble to "get while the getting is good." Even if that is so, we must dismiss from our minds that phase of reaction from war endeavors and declare for new, high standards. To-day, let us start putting our shoulders to the wheel, all together. Let us Work a little more, Think a little harder, Buy without forebodings,—and Sell with a Conscience. We must keep a clear eye out for the other fellow's interests as well as our own.

The one rule that assures a full measure of prosperity is the Golden Rule. It is simple, sure, safe. Work this rule and let it rule your work.

Ways of Making the Show Window Attractive

Window Displays of Plumbing and Heating Goods Are Valuable Help—Inexpensive and Effective Decorations Easily Made—Artificial Flowers, etc., Cost Very Little And Are Practically Indestructible—Practical Suggestions Along This Line.

NO matter how small your show window is, and no matter how primitive the arrangements for display are in connection with it, it is still possible to make it really attractive in appearance by means of a very

little effort, and a very small expense.

Understanding, readily enough, that the windows which are in the fronts of many plumbing and heating shops are not built for display purposes; and realizing the need for practical suggestions that will help the contractor to overcome this difficulty, this article offers a number of thoroughly practical

suggestions based on experiences of Trade Extension Bureau men.

The illustrations herewith show detailed drawings for backgrounds of very simple construction that could be readily made by any man who is at all handy with tools. These are especially adaptable to store windows, where there is no bulkhead floor. That is the idea of the pedestal shown in each case in front of the background.

In the case of show windows where there already is a bulkhead floor, that is anywhere from one foot to two feet above the sidewalk level, the pedestal could be omitted if desired, and only the upper part of the background made and used.

In the case of the oval shaped background, shown here with the lavatory displayed in front of it, the face of the background is made of beaver-board or similar material, cut as indicated and supported by light frame work. The central part of this is recessed about three inches. This recessing is accomplished by bending light wooden strips into the shape indicated for a frame.

The beaver-board is decorated by being tinted in an attractive color with the spray from an air brush. It would be easy enough to have your sign painter carry this idea of decoration out as far as you like. But be very careful that the background is not overloaded with decoration. It is merely intended to set off what is displayed in front of it, and not to distract attention from the article displayed.

Using Pedestal

The pedestal in front of the background and the two small shelves shown at each end of it are easily enough made out of any light lumber that is easily worked. Of course, the pedestal should be made substantial enough to support rather heavy weights. The two shelves at each end of the background can be used to support display cards or potted plants as indicated.

The other background shown in the illustration herewith is made in an exactly similar manner, except in the matter of details affecting the shape. In the case of this particular design, however, anything in the nature of a box could be used for the pedestal. When anything of that sort is used, it should, of course, be covered or draped with some sort of soft dark material.

The two illustrations herewith represent only two of the hundreds of ideas of this sort that might be effectively used.

In addition to backgrounds such as are suggested by the foregoing, the plumbing and heating contractor can do a great deal to make his window displays attractive and effective by the use of floral and other decorations, which are easily secured from suppliers of that class of material.

Artificial Flowers

Artificial flowers, vines, etc., when

used with judgment and good taste, add immensely to the display value of your show window arrangements.

No matter what your show window arrangements may be, it will pay you to make a couple or more of these mov-

able backgrounds, such as are suggested here. You will then be able to make complete and frequent changes in the appearance of your window that will, in a short while, do a great deal to effectively advertise your business.

A valance or drapery as an ornament for the top of the glass of your show

window is very desirable. You will find an illustration of what is meant by this in connection with the show window suggestions. These things are not at all expensive and can be readily made up to order.

NEW CANADIAN PATENTS

(Issued for Plumbing and Heating Goods)

NO. 207,078. RADIATOR

James Bowrey, Toronto, Ontario

A fluid containing radiator comprising a plurality of sections, one of the intermediate sections being of shorter length than the remaining sections and communicating with the adjacent sections on each side thereof, and heating means located against the underside of said short section.

A fluid containing radiator comprising a plurality of sections, one of the intermediate sections being of shorter length than the remaining sections and communicating with the adjacent sections on each side thereof, the communication between the short section and the adjacent sections, and heating means located against the underside of said short section.

A fluid containing radiator constructed as set forth in claim 2 in which the lower portions of the sections adjacent the short section are provided with outward bends at their upper ends to enclose said heating means and communicating at their upper ends with the sides of said chamber.

NO. 207,059. AERATION OF SEWAGE

Oswald Stott, Birmingham, Warwick, and Ernest Reginald Jones, Stourbridge, Worcester, both in England.

In process of purifying sewage and other impure liquids in which the purification is effected by bacterial sludge and air, introducing air to the sewage or liquid and sludge at the surface of such liquid in a tank by artificially circulating the sewage or liquid by mechanical means, substantially as set forth.

In the purification of sewage or other impure liquids in which the purification is effected by bacterial sludge and air, substantially according to the method specified in claim 1, mechanically introducing the air into the sewage or liquid and sludge at or near the surface of the tank, and causing the air to be carried into the lower portion of the liquid body by mechanically circulating the liquid, substantially as herein set forth.

In process of purifying sewage and other impure liquids in which the purification is effected by bacterial sludge and air introduced into it at the surface of the liquid, artificially circulating the sewage or liquid by a plurality of propellers in series extending along the surface of the liquid in the tank for practically the full length of the tank, and causing the liquid and air to pass down to the lower part of the tank

and over the bottom thereof, substantially as set forth.

* * *

O. 207,356. RADIATOR AIR VALVE

Conrad Feuser, Bloomfield, New Jersey, U. S. A.

As an article of manufacture, a valve case having a certain counterbored aperture therethrough forming a valve and seat therein, a ball check valve co-operating with said seat, the upper end of said case having an external thread to receive the cap of a radiator and valve, and its lower end being internally threaded to receive the head of said radiator air valve.

As an article of manufacture, a valve case having a central aperture therethrough, said aperture being counterbored to form a valve seat, a ball valve located in the counterbored portion of said aperture for co-operation with said seat, and a screw-threaded cap for said case to retain said ball valve against accidental displacement.

As an article of manufacture, a check

has an outer water chamber, said intermediate and top sections also having central water chambers spaced apart from their outer water chambers to afford a sec-

ondary combustion chamber, water conduits connecting the outer water chamber in the intermediate section to the outer water chambers in the fire pot and top sections, other water conduits connecting the inner water chamber of the intermediate section to the outer water chambers in the fire pot and top sections, and communicating water passageways between the outer and central water chambers in the top sections, said conduits being in the form of union-equipped pipes located outward of the heater and separably connecting the fire pot and intermediate and top sections, and holding the same in assembled relation.

valve case having a counterbored central aperture therethrough forming a valve seat therein, a ball valve resting upon said seat, an apertured cover for retaining said ball valve against displacement, and means for securing said valve case upon the head of a radiator valve for co-operation with the thermostatic valve thereof.

* * *

NO. 207,359. HOT WATER HEATER

John Fleischmann, Minneapolis, Minnesota, U. S. A.

A water heater including fire pot, intermediate and top sections, each of which has an outer water chamber, said intermediate section also having a central water chamber spaced apart from its outer water chamber to afford a secondary combustion chamber, water conduits connecting the outer water chamber in the intermediate section to the water chambers in the fire pot and top sections, and other water conduits connecting the central water chamber of the intermediate section to the water chambers of the fire pot and top sections, said conduits being in the form of union-equipped pipes located outward of the heater and separably connecting the fire pot and intermediate and top sections and holding the same in assembled relation.

A hot water heater including fire pot, intermediate and top sections, each of which

has an outer water chamber, said intermediate and top sections also having central water chambers spaced apart from their outer water chambers to afford a sec-

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

FIG. 34.
Cross Section. Imhoff Tank.

Article No. 26 of the Series—Illustration No. 34

(Continued from last issue)

THE sewage flows over an overflow weir the full length of the tank into a distributor which consists of supply or feeding channels connected to gutters which have holes made along the bottom in which drip points are inserted (Fig. 34). By this system of distribution the tank effluent is evenly spread over the sand filter which is supported by a concrete slab in which conical holes have been made by wedges during the construction of same. This slab is made in sections and is supported by niches in the main walls which are filled with clay so as to prevent leakage, at the same time allowing any section to be removed for gaining access to the tank; the conical holes are filled with small stones to prevent the sand escaping through same whilst at the same time allowing the liquid to be evenly distributed over the graduated gravel for final purification.

The sand in the filter acts as a strainer and collects all the solid, fine matter in suspension which is produced in all septic tank effluent through the splitting up of the solids by decomposition, and unless inserted, especially

with a single tank installation, would very soon choke up the coarse gravel filter media and decrease the capacity of the bed as explained fully in the preceding data.

This filter should be well ventilated and designed as shown, the sizes and dimensions being governed by the number of people served. Provision should be made for cleaning out the septic tank as well as the sand filter at least once a year, then with proper care and attention the results should prove very satisfactory.

In the larger public buildings such as asylums, colleges, schools, hospitals, etc., where the quantity of sewage to be treated is considerably greater, the small Imhoff or two-story sedimentation tank gives better results than the ordinary septic tank. This class of tank has been installed with excellent results by several United States and Canadian cities on a large scale and has produced good results which have remedied to a certain extent the greatest drawback to the septic tank effluent previously described.

Provincial Board of Health Sanitary Equipme

Statistics received from Provincial Sanitary Inspector F. E. Dallyn show that in 1919 the death rate from typhoid fever, in towns of Ontario, was four times as great as in cities.

No better opportunity than this could be had for Sanitary Engineers to demonstrate the value of their profession to the community in which they do business.

Sanitary engineers can cope with the problem of sanitation to best advantage and accomplish the desirable results. It is their field and what characterizes the modern sanitary engineer from the old style plumber.

Few people could not be seriously influenced by the fact that the death rate in towns is four times as great as in the cities if the cause were explained.

Report Shows Great Need of in Ontario Towns

Lack of sanitary conveniences in towns should be as inexcusable as they are in the cities, yet it is estimated that 25% of the dwelling houses in towns have outside conveniences.

People in towns buy pianos, talking machines and other luxuries which cost as much or more than a modern bathroom outfit of the Port Hope Standard, and they will buy bathroom equipment, too, from sanitary engineers that point out the benefits of adequate sanitation.

The existing need for better sanitation can be made to provide abundance of work that will yield good profit and improve conditions throughout the country which need immediate attention.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

FIRE LOSS

Galt, Ont.—Two thousand dollars loss was caused by a blaze which started in the plumbing shop of W. H. Pinkett, when some oakum ignited from flames of a gasoline torch which one of the plumbers was using to thaw out water pipes.

SPEND \$60,000 ON WATERWORKS

Milverton, Ont.—The village of Milverton, with 800 population and an assessment of \$500,000, is spending \$60,000 on a new system of waterworks.

TORONTO PLUMBERS ELECT OFFICERS

Toronto.—The Canadian Local of Plumbers' and Steamfitters' Union, No. 146, elected the following officials for 1921 at their regular meeting: President, W. Paterson; vice-president, J. Falvey; secretary, A. Wright. A resolution was passed protesting against allowing American architects to prepare plans and specifications for public buildings throughout the Dominion.

LOST HIS NERVE ATTEMPTING TO HOLD UP PLUMBER

Windsor, Ont.—Paul Jackson, a 17-year-old youth who said he came here from Chicago, attempted to hold up the plumbing shop of Pennington & Laing, on Caron Avenue, but lost his nerve before the job was half done. He entered the shop with a revolver in his hand, delivered the customary ultimatum to the two members of the firm he found in the office, but after they had complied and elevated their hands, Jackson let his gun drop to the floor and fled to the street. He was chased half a mile and caught by a policeman.

OBJECT TO SEWERS

Dundas, Ont.—Objection is being taken by some of the residents on certain streets against the laying of the sewers as they claim that they are not needed by the class of houses that are built on them. Some of the residents are much opposed to the sewers, for they claim that there is no present or prospective need for them, and it will mean that they will have 15 cents per foot added to their taxes for the next thirty years. When plans were prepared for the sewer system they were made most comprehensive so as to cover the whole town, and they were adopted as prepared.

WESTERN ONTARIO NEWS

James Coulter, Carlyle Ave., Tilbury, Ont., is preparing plans for a new \$5,000 bungalow and wants prices on heating and plumbing.

Trustees of S. S. No. 1 Boundary East, Listowel, Ont., will have plans prepared at once for new school. Prices wanted on heating.

Frank Fisher, Kincardine, Ont., is preparing plans for new \$5,000 bungalow and wants prices on heating and plumbing.

The Lutheran congregation at Brodhagen, Ont., wants prices on heating in connection with new \$35,000 church to be erected this spring.

Imperial Bank has purchased site and plans for erection of new branch office at Harrow, Ont. Building will contain manager's residence above.

Plans will be prepared for a new bank at Harrow, Ont., for the Imperial Bank and work will be commenced early in the spring.

F. Light, plumber and tinsmith at Aylmer, Ont., has to seek new premises as a result of his store being sold and plans to erect a suitable shop near his residence.

Tenders will be called in about three weeks at London, Ont., for an eight-room addition to the Tecumseh School. Prices are wanted on steam heating and plumbing. R. M. McElheran, secretary of the Board.

At the annual meeting of the Masonic Temple Company, of London, Ont., Ben. Noble, of the firm of Noble and Rich, was elected a member of the House Board for 1921.

R. M. McElheran, secy. Bd. of Education, London, Ont., is receiving tenders until February 21 for new lavatories and steam heating, also ventilating system at Victoria School. Estimated cost \$35,000.

Prices are wanted immediately by the Utilities Commissioners at London, Ont., on one 1,000,000 gallon turbine pump, electrically driven, and one 3,000,000-gallon pump, also electrically driven. The first is to operate under 150 pounds and the other 20 pounds. These will be

used for pumping river water to supply the railways. E. V. Buchan, general manager.

At Wallaceburg, Ont., plans will be proceeded with for the erection of a new memorial hospital to cost \$25,000 and prices are wanted on heating, plumbing and electrical equipment.

Prices are wanted by the Parks Board at London, Ont., for hot water heating system in connection with new greenhouses to cost \$7,000. Thos. McFarland, chairman.

LONDON WILL INSTAL FILTRATION PLANT

London, Ont.—The Public Utilities Commission will instal filtration equipment at the Horton Street pumping station at a cost of \$55,000. This equipment is designed to remove traces of sulphur, etc., from a portion of the water supply secured from the Beck artesian wells.

DEFER PLUMBING TENDER

Mimico, Ont.—A tender for plumbing work in the local school submitted by Jas. Doughty, mayor of Mimico, has been held over for consideration, owing to some doubt as to his eligibility to do town work while he holds the position of mayor.

WILL UNDERTAKE MUCH DRAINAGE WORK

Winnipeg.—The Greater Winnipeg Water District will underdrain an additional two and one-fifth miles of the aqueduct immediately east of Deacon, 13 miles east of Winnipeg, it was announced. The cost of the work is estimated at approximately \$120,000.

Construction operations will begin about February 15, when Fowler & Young, contractors, complete the underdrainage of a two-mile section just east of the new section to be drained. The work will give employment to about 50 men. The entire underdrainage work, it is expected, will be completed next autumn.

Contractors are completing the underdrainage of two miles of the tube farther east at a cost of \$80,000. This work will be completed about February 15, the district commissioners reported at the regular meeting of the board.

The new section to be drained is between Mile 15 and one-fifth of a mile from Mile 13. The total drainage outlay will approximate \$200,000.

Convention of Saskatchewan Plumbers

Plans Made for Third Annual Convention of
Saskatchewan Sanitary and Heating Engineers
—Results of Septic Tank Inspection to be
Outlined

REGINA, Sask.—A communication from Secretary J. Adam, of the Saskatchewan Society of Sanitary and Heating Engineers in regard to the forthcoming convention is as follows:

To the members of the Saskatchewan Society of Sanitary and Heating Engineers.

Re Third Annual Convention at Moose Jaw.

I have received word from our president, J. T. Alexander, that the convention will be held from March 1st to 3rd: March 1st—Convention. Meeting of executive only.

March 2nd, a.m.—Convention. Proper to commence.

March 3rd, p.m.—Convention. Wholesalers and jobbers to attend convention.

The convention last year was well at-

tended and it was felt by all present a successful one. It is expected that all members will endeavor to keep these dates open and assist to make our third annual convention even better than the preceding ones. Interest and bring along any firms in your locality, who are not as yet members. Their interests are identical with ours, and the more representative our society is the more power for the good of the trade which we represent.

Moose Jaw can be depended on to make things pleasant for the boys. Let us return the compliment by our presence.

Arrangements have been made to have a report on the results of the "Septic Tank Inspection," which took place last summer. This will be presented by R. H. Murray, sanitary engineer of the Bureau of Public Health.

Back Venting Clause Not Strictly Applied

F. A. Dallyn, Provincial Board of Health,
Upholds Ontario's New Plumbing Regulations

LONDON, Ont.—Prof. F. A. Dallyn, of the Provincial Board of Health, rather effectively shot to pieces allegations that the new Ontario plumbing by-laws are designed to particularly benefit the trade, at a meeting he held here last week with the local board of health. He declared emphatically that the new Ontario regulations are based on the best plumbing practice over a period of sixty years. They are the result, he pointed out, not of one man's experience, nor of one district's experience, but of what has been learned by the best men in the business operating under all sorts of conditions and having all kinds of problems to solve.

Dr. O. I. Cunningham, a dentist, is chairman of the board of health in London and criticized the by-laws because they had been drawn up largely upon information from the sanitary and heating engineers.

"Where else would you expect to get the information required?" asked Prof. Dallyn pointedly, and he went on to state that the plumbers' guild in Toronto is one of the best organized self-instructing organizations in the Dominion. They are thoroughly abreast of the times, he declared, and carry on a campaign of education among their members that makes for constant efficiency. Toronto, he said, has one of the very best sets of

plumbing regulations to be found, not in Canada, but in America.

Prof. Dallyn was in conference with the local board over points of difference in connection with back venting. Chairman Cunningham took the stand that back venting is an unnecessary and useless expense. He gave it as his opinion that plumbing regulations should be under the jurisdiction of the building inspectors rather than the boards of health.

The provincial officer pointed out that even if this were effective any regulations proposed would still have to meet with the approval of the Provincial Board of Health. It did not matter, he said, what department did the work. In connection with back venting he stated that a clause had been inserted in the regulations by which exceptions could be made. The London authorities had completely eliminated clauses in their regulations in reference to back venting and he made it plain that the Provincial Board could not agree to this. The additional cost of installing back vents was equalized, he said, by the fact that repairs could be carried out at considerably less expense than on non-vented systems.

As a result of the conference a preliminary understanding has been arrived at by which the provincial regulations in regard to back venting will not be too strictly applied.

Doings in Ottawa and District

USE PUMPS FOR SEWER DRAINAGE

THE pumping system for sanitary sewer drainage is to be used in a section of Ottawa for the first time in the history of the city. There is an area in the southern part of the city which cannot be drained by gravity into the existing city sewers. It is proposed to drain the sanitary sewerage into a collecting chamber and then to pump it up to the level of the existing sewers in the vicinity. Later on storm sewers will be laid, but there is no immediate necessity for them, owing to the contour of the land.

Heretofore, all the local sewers have been laid on the combined system.

* * *

MORE FREQUENT GARBAGE COLLECTION

One of Ottawa's new aldermen, Herbert McElroy, is strongly urging the adoption of the system of twice-a-week garbage collection during the summer months. Some years ago when the garbage collecting was done by contract the entire city was covered twice every week during the summer, but since the work has been done by day labor there has never been a collection oftener than once a week in any part of the city.

Alderman McElroy points to Toronto and other Canadian centres as shining examples of the success of the twice-a-week system.

The alderman has the following motion for the next meeting of city council:

"That in view of the general feeling that during the summer months a semi-weekly collection of garbage in the residential section of the city would be beneficial as a sanitary measure, the Board of Control be requested to consider the matter in the near future as to its feasibility."

* * *

REPORT OF PLUMBING INSPECTOR

In his annual report Chief Plumbing Inspector S. Daughtry states there were 775 plumbing permits issued between November 1st, 1919, and October 31st, 1920, an increase of 177 over the previous year. During the year five prosecutions were proceeded with. In each and every case the magistrate upheld the by-law.

The inspector recommends that the proposed plumbing by-law, which has been before the city council for nearly four years, be enacted as soon as possible, as the by-law now in force fails to deal with the many sanitary requirements in a modern plumbing system.

The total number of matters attended to during the year by the inspector and his staff was 5,476, as compared with 3,556 the previous year.

Waterworks, Tenders, Construction, Contracts Awarded, Etc.

Lauzon, Que.—Council has passed by-law to borrow \$325,000 for construction of waterworks system. Tenders will be called when by-law is endorsed by ratepayers. H. Bourassa, secretary-treasurer.

* * *

Malden, Ont.—Noah Deslippe, secretary Malden township council, will receive tenders until February 16 for drainage work.

* * *

Newmarket, Ont.—By-law has been passed authorizing construction of sewers costing \$29,000 for town. P. J. Anderson, clerk.

TENDERS WANTED

Toronto.—G. F. Smith, 1394 Gerrard St. E., is building two stores and apartments at cost of \$7,000 and will receive tenders for plumbing and heating.

* * *

Toronto.—Philip Brand, 10 Annette St., is erecting a residence and garage costing \$6,500 and will receive tenders for heating and plumbing.

CONTRACTS AWARDED

Louisville, Que.—Heating contract for alterations to church costing \$240,000 for parish council is placed with Germain & Freres, 87 Antoine St., Three Rivers. Furnaces are supplied by Brunelle Furnace & Boiler Co., Yamachiche, at \$16,000.

* * *

Galt, Ont.—R. G. Ballantyne & Son, 31 Colborne St., Brantford, has plumbing contract for plant costing \$25,000 for Elliott & Whitehall.

* * *

St. Catharines.—Preston Bros., 218 Ave., Toronto, have plumbing contract for addition to residence costing \$40,000 for L. E. McKinnon, Glen Ridge.

* * *

Three Rivers, Que.—Plumbing and heating contracts for extension to hotel costing \$20,000 for Dr. C. Deblois are awarded to C. S. Hamelin & Cie.

* * *

Bridgewater, N.S.—Plumbing and heating contracts for bank costing \$50,000 for Royal Bank of Canada are awarded to H. G. Hagen & Co., Hollis St., Halifax.

* * *

Quebec, Que.—Contract for steam heating for store costing \$40,000 for S. N. Parent Estate, 310 Grande Allee, is placed with Vandry & Matte, Ltd., 43 St. Joachim St.

* * *

Toronto, Ont.—Plumbing contract for one pair residences costing \$9,000 for W. J. Wingrove, 83 Bellefair Ave., is placed with John Fraser, 83 Eaton Ave.

Heating contract is awarded to Toronto Furnace & Crematory Co., Ltd., 111 King St. E.

* * *

Toronto, Ont.—Plumbing and heating contracts for residence costing \$5,000 for Wm. Greenwood, 26 Merrill Ave., are awarded to J. T. Bowes, 786 Danforth Ave., and F. Sturdy, respectively. Furnace supplied by Empire Stove & Furnace Co., Ltd., Owen Sound, Ont.

* * *

Toronto, Ont.—Plumbing and heating contracts for one pair residences costing \$7,000 for John Rankin, 68 Roseheath Ave., are awarded to W. J. Crone, 27 Sparkhall Ave., and J. C. French, 505 Pape Ave., respectively.

* * *

Toronto, Ont.—Additional contract for residence costing \$18,000 for Dr. W. J. Wilson, 380 Bloor St. W., heating, Robert Lewis, 11 Ethel Ave.

* * *

Toronto, Ont.—Heating contract for three residences costing \$5,000 each for F. C. Barkey, 22 Norman Ave., is placed with Toronto Furnace & Crematory Co., Ltd., 111 King St. E.

* * *

Toronto, Ont.—Plumbing contract for residence costing \$10,000 for J. A. Shier, 13 Watford Ave., is awarded to Claude Davies, 45 Sellers Ave. Robert Steen, 3 Grimthorpe Ave., has contract for hot water heating.

* * *

Toronto, Ont.—Plumbing and heating contracts for one pair of residences costing \$5,000 each for C. B. Routcliffe, 11 Roseheath, are awarded to Elite Plumbing & Heating Co., 201½ Jones Ave., and Toronto Furnace & Crematory Co., Ltd., 111 King St. E., respectively.

* * *

Three Rivers, Que.—Plumbing contract for four residences costing \$5,000 each for F. X. Vanasse, 37 Du Platon St., is awarded to Henri Biron, 171 Laviolette St.

* * *

Cap de la Madeleine, Que.—Additional contract for erection of grinding mill costing \$500,000, electric work shop costing \$10,000, extension to wet machine room costing \$100,000, extension to motor room costing \$200,000, machine shop, pattern making room, store room and wrapping room, for St. Maurice Pulp & Paper Co., Ltd., plumbing, John Tweedle & Co., 163 Lagauchetiere St. W., Montreal.

* * *

Toronto, Ont.—Additional contracts for addition and alterations to office building costing \$50,000 for Standard Fuel Co., 58 King St. E., Ross & Smith, 70 Lombard St.; plumbing, J. R. Honeycombe, 122 Yarmouth Rd.

CONSTRUCTION

Bonsecours, Que.—J. Colin, Riviere du Loup, Que., is building a school for school board.

Halifax, N.S.—General contract for erection of Art Building, costing \$100,000, for Dalhousie University.

* * *

Barwick, Ont.—Chapple Municipality, Barwick, will build a consolidated school at cost of \$20,000. Jas. M. Johnston, clerk.

* * *

Blanchard, Man.—By-law authorizing erection of hospital will be submitted shortly.

* * *

London, Ont.—L. E. Carrothers, architect, c/o Board of Education, is preparing plans for addition to school to cost \$20,000.

* * *

London, Ont.—Plans will be prepared for Nurses' Home estimated to cost \$35,000 for Provincial Government.

* * *

Brookland, Man.—Ratepayers recently defeated by-law authorizing addition and alterations to school costing \$40,000 for Brookland S. D.

* * *

Cawston, B.C.—Cawston Community Hall Co. will erect a Community Hall.

* * *

Durham, Ont.—Rev. J. S. McGoe, Markdale, Ont., will receive tenders for altering mill into church at estimated cost of \$10,000.

* * *

Eriksdale, Man.—Ratepayers passed by-law authorizing erection of hospital costing \$30,000 for Gov't. and Eriksdale Hospital Dist.

* * *

Hamilton, Ont.—Witton & Walsh, architects, 7 Hughson St. S., are preparing plans for addition to school estimated to cost \$40,000 for Bd. of Education. Tenders will be called shortly.

* * *

Hazlemere, B.C.—United Farmers & Social Club, Hazlemere, will build a public hall. Tenders will be called shortly.

* * *

Holmfild, Man.—Municipality of Killarney, Killarney, Man., contemplates building a hospital at cost of \$15,000. J. G. H. Russell, architect, 1110 McArthur Bldg., Winnipeg.

* * *

Hull, Que.—Erection of addition to school at cost of \$35,000 is contemplated by La Cmsn. Scolaire. Chas. Brodeur, architect, 63 City Hall Ave., is preparing plans.

* * *

Huntingford, Ont.—Plans are being prepared for Parish Hall for Christ Church Congregation. Rev. W. B. Moulton, Rector.

* * *

Melita, Man.—A new by-law authorizing erection of hospital will be submitted at an early date.

Montreal, Que.—Erection of a school costing \$50,000 is contemplated by R. C. School Cmsn., 87 St. Catherine St. W. A. Lafontaine, N.P., secy.-treas.

New Waterford, N.S.—Town council plans altering block into town hall at estimated cost of \$10,000.

Ponsonby, Que.—Parish Congregation contemplates building a church this year.

Pipstone, Man.—By-law will be submitted to ratepayers authorizing erection of hospital.

Roblin, Man.—Municipality of Roblin and Turtle Mountain contemplate building a hospital.

Rodney P.O., Ont.—Plans will be prepared for school to cost \$9,000 for trustees S. S. No. 9, Aldboro Twp., Ont. J. A. McRae, secy., Rodney P. O., Ont.

Rosser, Man. — By-law authorizing erection of school costing \$80,000 for Brookland S. D. No. 1440, was recently defeated by ratepayers.

Russell, Man.—By-law authorizing construction of hospital costing \$100,000 for Prov. Gov't., Winnipeg, will be submitted to ratepayers.

Souris, Man.—Erection of a hospital is contemplated by Souris & Glenwood District, Hugh McCullough, Chrm., Souris.

St. Marys, Ont.—Anglican congregation will rebuild parish hall. Rev. C. K. Masters, Rector.

St. Vital, Man.—Ratepayers defeated by-law authorizing erection of school costing \$50,000.

St. Vital, Man.—Woodman & Cubidge, architects, Trust & Loan Bldg., Winnipeg, are preparing plans for school to cost \$25,000 for Fort Garry S. D., St. Vital.

Swan River, Man.—Swan River Hospital District plans erection of hospital.

Sully, Que.—Erection of three schools is contemplated by School Cmsn. J. N. Boucher, secy.-treas.

Thamesford, Ont.—Plans will be prepared for parish hall for Anglican congregation. Rev. H. E. Bray, pastor.

Toronto, Ont.—Bd. of Education contemplates improving heating system at Technical School by installing two new boilers estimated to cost \$15,000. W. W. Pearse, secy.-treas., 155 College St.

Toronto, Ont.—Erection of addition to church is being considered by St. Chad's Anglican Church congregation. Rev. A. J. Reid, pastor, 946 St. Clarens Ave.

Divergent Views on Filtration

Engineers Discuss Relative Merits of Processes Used in Toronto—Sand Filters Best for Treating Lake Water

TORONTO.—The success of the portion of the Toronto filtration plant in which the "drifting sand" process is being used was the subject of an extended discussion before the municipal section of the Engineering Institute of Canada at a recent meeting. The discussion arose out of a paper dealing with the operation of the local filtration plant by James Milne in which he gave details of the operation of the two processes in use there—the "slow sand" and "drifting sand" processes—and tables of the operating costs in each case. Allen Hazen, of New York, the engineer who had prepared the designs from which the original "slow sand" plant had been constructed, contended that some of the deductions made by Mr. Milne in favor of the "drifting sand" process were unfair.

Mr. Milne's findings were very favorable to the newer process especially in the matter of capacity. "The principle of the drifting sand has proved to be sound and the continuous sand-washer is a success," he said. "By chlorination with filtration including administration, operation and maintenance, interest and

sinking fund, will be practically the same in both plants."

Mr. Hazen asserted on the other hand, "on the face of the returns, the old plant, built by Mr. C. H. Rust, City Engineer, from designs made by the writer, seems to have been distinctly the more satisfactory from every point of view. It was certainly cheaper to build; it is cheaper to operate; and from advice otherwise received, it appears to be more successful in purifying the lake-water." In figuring cost comparisons, he claimed, Mr. Milne had dealt unfairly with the older plant. He stated that the old plant had demonstrated a capacity of 52 million gallons per day or equal to that figured by Mr. Milne for the drifting sand process. He contended that from a purification standpoint the older process was much more effective and remarked that looking at it from the standpoint of eight years afterwards, he still held to the soundness of the position he had taken in 1912, that sand filters on the lines of the first plant were best adapted to treating Lake Ontario water for the City of Toronto.

Toronto, Ont.—St. John the Baptist Anglican Church congregation plans to erect Parish House to cost \$25,000. Plans will be prepared. Rev. Canon W. L. Baynes Reed, pastor, 156 Kingston Rd.

Toronto, Ont.—Erection of new Sunday School or addition to present bldg. is planned by St. Matthew's Anglican Church congregation, Rev. C. A. Seager, M.A., pastor, 1A Langley Ave.

Toronto, Ont.—Erection of a Church Home is contemplated by St. Paul's Anglican congregation. Rev. Edward Morley, pastor, 250 Willard Ave.

Toronto, Ont.—Erection of a Parish House is contemplated by St. Cyprian's Anglican Church congregation. Rev. R. Seaborn, pastor, 84 Follis Ave.

Toronto, Ont.—Construction of a Memorial Hall is being considered by St. Stephens Anglican Church congregation. Rev. Thos. Wallace, pastor, 99 Bellevue Ave.

Toronto, Ont.—St. Barnabas Church congregation contemplates building addition to church. Rev. F. E. Powell, pastor, 752 Logan Ave.

Toronto, Ont.—St. John's Anglican Church congregation, Rev. R. McNamara, pastor, 208 High Park Ave.,

purchased site at north-east corner of Humberside and Quebec Aves. for erection of church estimated to cost \$50,000.

Toronto, Ont.—St. Matthias Anglican Church congregation plans to erect a Parish House. Rev. F. H. Hartley, pastor, 63 Bellwoods Ave.

A SCRAMBLE FOR GOODS

During an interview with Mr. John Jardine, of A. B. Jardine & Co., Res-peler, Ont., it was stated to Sanitary Engineer that the lack of buying of plumbing and heating requirements now will cause a scramble for goods later on, and manufacturers may then not be able to meet the demand. He stated that the manufacturers are not now in position to make goods and hold them and thus cannot speed up production now in anticipation of a later stimulus.

CHATHAM STEAM HEAT COMPANY PROMISES TO DO ITS BEST

Chatham.—The Chatham Steam Heat Company has made arrangements to use the boilers of the Chatham Gas Company and discontinue using the plant of the C. W. & L. E. Railway. The company has decided to maintain service, and while not assuring the patrons satisfactory service during extreme conditions, will maintain the best possible service for the balance of the winter. Next year, it is thought, a new central plant will be built.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

L EAD pipe and waste have been reduced in price again and compression work is lower. Other declines have been made in bar iron and steel, and in black sheets and English standard galvanized sheets. Some lines of solder are lower and plumbers' oakum has been reduced. Price changes are not so numerous and most lines are holding at recent declines. Wrought pipe and fittings, soil pipe, range boilers, radiators, conductor pipe and eavestrough, etc., as well as enamelled ware and closets are unchanged in price. Ingot metals are still quiet, but a better tone is observed in these, and copper is showing more firmness. In

the steel markets there is not much change or improvement shown, and reports from Pittsburgh districts indicate that the present rate of pig iron production is only at the rate of 60 per cent. of capacity and predictions are that it will be very much lower in the course of the next two or three months.

Business on the whole is quiet, but a little improvement is noticed in some directions, and spring bookings are reported by some wholesalers to be encouraging. With the resumption of building operations in the spring it is expected that sales will show a substantial increase.

MONTREAL

MONTREAL, Feb. 12.—Lower quotations on bar iron and steel, black sheets, English standard sheets, lead pipe and solders are given for this issue. Practically all lines of bar iron and steel are lower, black sheets show a substantial reduction and English standard sheets are quoted at a reduction of 50 cents per 100 pounds on all gauges. Lead pipe and waste are 1 cent per pound less, and a reduction from 1 to 2 cents is made on the different solders. Corrugated sheets, radiators, boilers, pipe and pipe fittings remain steady and no change of price is noted on soil pipe or oakum. Enamelled ware, closets and compression goods hold at present prices. Eavestrough and conductor pipe remain at prices set a few weeks ago. Business in practically all lines shows a slight improvement over the previous quiet months and spring bookings, for many lines are now coming in.

Bar Iron is Lower

Montreal.

Lower quotations are made on practically all lines of bar iron and steel. The reduction runs from 25 to 35 cents per 100 lbs. on the different grades, common bar iron now selling at \$4.20, the old price being \$4.55. Business continues quiet, with stocks fairly light. Following are the quotations:

Common bar iron, 100 lbs.	4 20
Refined iron	5 80
Iron finish machinery steel	4 25
Mild steel	4 20
Single reeled machinery steel	6 80
Band steel	4 20
Spring steel	6 00
Sleighshoe steel	4 20
Tire steel	4 40
Tie calk steel	5 20
Harrow tooth steel	4 35
Mining tooth steel, per lb.	0 24½
Black Diamond tool and cast steel, per lb.	0 24½

NOTE.—Refined iron is approximately \$1.50 per 100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Scrap Metals Dull

Montreal.

Business is reported very quiet in scrap metals, very little buying or selling being done. Dealers are of the opinion, however, that the dull season is nearing an end and look for an increased volume of business in the near future, as enquiries continue to be made. Present quotations are as follows:

Dealer's Buying Prices

Automobile tires	0 75
Yellow brass	0 07
Red brass	0 12½
Light brass	4 50
Scrap zinc	0 05
Lead, heavy	4 00
Lead, tea	2 50
Light copper	9 00
Heavy copper	11 50
Wrought iron, R. Rd., No. 1, per gr. ton	13 00
Malleable scrap (ton)	15 00
Pipe scrap (ton)	9 00
Heavy melting steel	15 00
No. 2, busheling	5 00
Boiler plate	12 00
Stove plate (ton)	20 00
No. 1 machinery cast	25 00	28 00

New Sap Bucket Prices

Montreal.

With the sap and maple syrup season fast approaching, stocks of both buckets and spouts are ready for deliveries. Booked orders on these are not as heavy as last year, still a good volume of business is expected. Some manufacturers are making their buckets of Imperial measure this season, thus enabling the purchaser to determine just what size he requires. They will be sized as 1 gal., 1½ gal. and 2 gallon. The older sizing method is also still used and quotations on both are as follows:

SAP BUCKETS.—No. 7, \$20.13 per hundred; No. 8, \$21.88; No. 9, \$24.50; No. 12, \$26.25; No. 16, \$31.50.
1 gal., \$21.88; 1½ gal., \$26.25; 2 gal., \$31.50 per hundred.
Eureka, \$16.50; Perfection, \$25; Sterling, \$38 per thousand.
Square syrup cans, \$26 per hundred.

Sheets are Reduced

Montreal.

Lower quotations are now given on black and English standard galvanized sheets. Prices on sheets are governed to a great extent at present by stocks on hand, and even lower prices may be expected at not far distant date, it is believed. On U. S. standard sheets no change is quoted, but lower prices will no doubt be given within the next week or so. The decline on black sheets runs from 2.75 on the lighter gauges to 3.50 on the heaviest or 10 gauge. English standard sheets show a reduction of 50 cents per 100 pounds on all gauges. Quotations are as follows:

BLACK SHEETS—

10 gauge	7 75
12 gauge	7 80
14 gauge	8 10
16 gauge	8 25
18-20 gauge	8 30
22-24 gauge	8 40
26 gauge	8 50
28 gauge	8 75

GALVANIZED SHEETS—

U.S. Standard—		
10 3/4 gauge	11 75	
28 gauge	11 25	
26 gauge	11 00	
22 and 24 gauge	10 85	
20 gauge	10 65	
18 gauge	10 65	
16 gauge	10 50	
English Standard—		
28 gauge	12 50	11 50
26 gauge	12 25	11 25
24 gauge	11 65	10 85
22 gauge	11 30	10 40
18 and 20 gauge	10 60	10 25

NOTE.—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Corrugated Sheets Held

Montreal.

The recent decline still holds on corrugated sheets. Business remains quiet with very few sales being made; this, however, is only thought seasonal and the demand will not likely improve much until the spring season opens. Prices are as follows:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	10 50
No. 26 gauge	11 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00
Less 7 1/2 %	

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

No Change in Oakum

Montreal.

No change has been made in the price of plumbers' oakum and it is still selling at 11 cents a pound in 50 lb. bales, and 12 cents for smaller quantities.

Soil Pipe Unchanged

Montreal.

The demand for soil pipe is small at present. However, this quiet period is experienced every year at this season. A greater volume of business may be looked for soon, as dealers will soon be getting their spring deliveries. Quotations are held as follows:

SOIL PIPE (medium and extra heavy)—	
2 and 3 inch, 10%.	
4 inch, 20%.	
5 and 6 inch, 15%.	
8 inch, add 5 %.	

FITTINGS—	
2 to 6 inch fittings, 40%.	
8 inch fittings, plus 5%.	

Conductor Pipe 50/10% Off

Montreal.

Quotations on conductor pipe now are 50 and 10 per cent. off the list. Business is very quiet at the present time. However, the new lists, with discounts, may stimulate buying for spring deliveries. Following are the prices on both round plain and round corrugated:

CONDUCTOR PIPE—	Per 100 Ft.
2 in.	18 40
3 in.	22 30
4 in.	29 60
5 in.	40 00
6 in.	49 00
Discount 50/10% off.	

Eavestrough 50/10% Off

Montreal.

Prices an eavestrough are 50 and 10 per cent. off list. Dealers report very little business offering. However, this

may be expected at this season of the year. Following are the quotations:

EAVETROUGH—

O.G. Square Bead—	Per 100 ft.	Per 100 ft.
8 in.	15 90	15 inch 28 80
10 in.	17 70	18 inch 36 80
12 in.	21 20	
O.G. Round, and Half Round—		
8 in.	16 90	15 inch 29 80
10 in.	18 70	18 inch 37 80
12 in.	22 20	
Discount 50/10% off list.		

Conductor Elbows 50% Off

Montreal.

Present quotations on conductor elbows are 50 per cent. off list. Round corrugated and plain round are the same price. Following are the quotations:

CONDUCTOR ELBOWS—

Plain round or round corrugated—	
2 inch	5 25
3 inch	6 00
4 inch	10 50
5 inch	24 00
6 inch	29 00
Discount 50% off.	

Boilers and Radiators Firm

Montreal.

The business offering on boilers and radiators is now slower and few sales are being made. Prices are holding firm, with no change made since the decline at the commencement of the year. Quotations are as follows:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
Discount 40% for hot water and 41% for steam.
Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 39%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 50 off list.

Square or sectional hot water or steam boilers, 15-in., list price.
For Ontario Government trimmings add 5 per cent. to list.

Square or sectional water boilers, 19-in to 36-in., 2 1/2 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., list price. Ontario Government trimmings, add 5 per cent.

Square or sectional water or steam boilers, 48-in., list prices. Ontario Government trimmings, add 5 per cent.

Round steam boilers, standard trimmings, 5 per cent. off. Ontario Government trimmings, list price.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Wrought Pipe Unchanged

Montreal.

List No. 48 is still the quotation on piping. With stocks now in good shape, the scarcity on some sizes being well overcome, lower prices are looked for in some quarters. However, prices now quoted are:

**LIST NO. 48.
PIPE—WROUGHT

No Change in Fittings

Montreal.

The recent decline in the price of pipe fittings still holds, and a fair demand has kept up for these different lines. Stocks are in very good shape, although a shortage is felt on some sizes. Quotations are:

	Less
Bushings, cast	20%
Do., malleable	20%

66-gallon	32 00		
82-gallon	42 00		
100-gallon	50 00		
120-gallon	60 00		

No Change in Waste

Montreal.

No further change is made in the price on cotton waste. A decline was made just recently on waste when lower prices became effective on all grades, both in colored and white. A gradual improvement is noted on the sales, and business has greatly improved during the last two weeks. Prices are as under:

WASTE

Enamelled Ware Improving

Montreal.

No change has been made in the price of enamelled ware. Manufacturers and jobbers report that business shows more improvement over the last few quiet months, and if building opens up to any extent in the spring a good season is expected along these lines. Quotations are as follows:

Sinks, roll rim, 18x30 in.	19 55
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$6 38 \$6 29 \$6 20

Lead Pipe and Solders Down

Montreal.

Lead pipe and lead waste are reduced one cent per pound, quotations now are 12½ cts. for piping and 13½ cts. for waste. All grades of bar solder are down one cent per lb. also. Wire solder is

reduced from 1½ to 2 cents per lb. Present quotations are as follows:

Lead pipe, per. 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.

Do., broken lots	0 15½

Gas Stoves Selling Well

Montreal.

Gas stoves and heaters are now selling well and bookings for these are said to be quite heavy at the present time. Locally the moving of tenants may have a great bearing on these. Oil stove bookings are also reported as being normal with other years. Spring deliveries on these will soon commence.

Ingot Metals Steadier

Montreal.

Although no marked change is reported on ingot metals, the market

shows signs of being somewhat steadier than it has for the past few weeks. Prices on tin, copper and lead are slightly advanced from last quotations.

TIN.—Tin continues irregular in London, but some judges are of the opinion that the recent liquidation is nearly through and a more stable market may be looked for. Whether this is only premature is hard to determine. Local price is 39 cts.

COPPER.—This metal shows a firmer tone in London and New York and the market is strictly stronger, however, whether lasting is hard to tell. Prices on electro, 19 cents; casting, 18¾ cents.

LEAD.—Lead has been a little easier in London and has touched the low point of 4.40 in the United States. Local quotations are 6¾ cents.

SPELTER.—A firmness is shown in London on spelter and evidently the bottom has been reached in U.S.A., however the recovery will probably be slow. Local price, 7¾ cents.

ANTIMONY.—A quiet market continues on antimony and little demand is shown. The local price is unchanged at 8 cents.

ALUMINUM.—Aluminum is still very quiet and there is practically nothing new to report on this metal. Local quotations, 34 cents.

TORONTO

TORONTO, Feb. 12.—Price changes are fewer in plumbing goods, and the chief features are probably the lower quotations on brass goods, with declines in standard compression work and stop and waste cocks and another reduction in the price of lead pipe and lead waste. Plumbers' oakum is lower and a slight reduction has been made in black sheets. Other lines are holding unchanged and prices are maintained on wrought pipe and fittings, cast pipe, bar iron and steel, radiators, range boilers, eavestrough and conductor pipe, etc. Ingot metals are quiet still but are showing a better tone and more firmness is shown in copper markets. Scrap metals are showing little change and are quiet. Wares and closets are unchanged and are quieter than they have been. Wholesalers report a quiet time, but a fair movement of goods is taking place for the time of the year. Plumbers generally have not had the business that the extra cold weather usually brings, but on the other hand have been enabled to finish other jobs that are often held up on account of the weather at this period of the year.

Iron and Steel Quiet

Toronto.

Though a fair amount of orders are being received for bar iron and steel, they are small, and the volume of business is light. No great improvement is looked for during the next few weeks. There is no quotable change in prices and following are market quotations:

IRON AND STEEL

Common bar steel, 3-16 in. and lighter...	\$ 5 25
Common bar iron, 3-16 in. and lighter...	5 25
Common bar iron, ¼-in. and heavier	4 75
Angle base	4 75
Horseshoe iron	6 00
Tire steel	5 95
Band steel	5 25

Spring steel	12 75
Mining drill steel	23 00
Common cast tool steel	20 00
Sleigh shoe steel	6 00
Norway iron	15 00
Toe caulk iron	6 70
Hoop steel	6 00

Radiators are Unchanged

Toronto.

Business is lighter on radiators now, and no changes have been made in prices. The discount for hot water remains 40 per cent. off list, and for steam radiators 41 per cent. On wall radiators 39 per cent. is quoted off list. Following are list prices:

Revised radiator list prices fare for 1, 2, 3, 4, and 5-column radiators per square foot.
 45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 40% for hot water and 41% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 30%.

No Change in Soil Pipe

Toronto.

Soil pipe and fittings are held unchanged at the prices set last month and sales are limited at this period of the year. The quotations are as follows:

SOIL PIPE (medium and extra heavy)—
 2, 3, 10%; 6 and 8-inch, 15% discount.
 4-inch, 20% discount.
 8 inch, add 20% to list.

FITTINGS—

2 to 6 inch fittings, 40 per cent. discount.
 8-inch, net.

Wrought Pipe Unchanged

Toronto.

Sales continue to be fairly good in pipe for the season of the year and stocks are in better shape now than they have been for a long time, and now that supplies have had time to accumulate the demand will possibly slacken until the spring business opens up. Prices are holding unchanged and are as follows:

LIST NO. 48.

Standard Butt Weld Pipe

Per 100 ft.

	Steel		Gen. Wrought Iron	
	Blk.	Galv.	Blk.	Galv.

Class B	0 26	0 36
Class C	0 17	0 26

Eavestrough and Pipe Hold

Toronto.

Eavestrough and conductor pipe are holding at recent changes and the movement of these goods is slow at the present time, but this is always expected during this month. Both trough and pipe are being quoted at 50 and 10 per cent. off new lists, which are as follows:

TROUGH (Eave)

O. G., Square Bead and half round.		Size in girth:	
	Per 100 ft.		Per 100 ft.
8-in.	\$15 90	15-in.	\$28 80
10-in.	17 70	18-in.	36 50
12-in.	21 20		
Less 50/10 per cent.			

PIPE (Conductor)

Plain, round or corrugated.

Per 100 ft. in 10 ft. lengths.	
2 in., in 10-ft. lengths, list	\$18 40
3 in., in 10-ft. lengths, list	22 30
4 in., in 10-ft. lengths, list	29 60
5 in., in 10-ft. lengths, list	40 00
6 in., in 10-ft. lengths, list	49 00
Less 50/10%.	

Conductor Elbows 50% Off

Toronto.

Conductor elbows are holding at the recent reduction and are quoted at 50 per cent. off new list. There is not very much demand for these goods at present. Quotations are the following:

ROUND CORRUGATED OR CRIMPED ELBOWS

2 inch, list	\$5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 50%.	

Sheets and Plates Quieter

Toronto.

Prices are not showing much change on sheets and plates, although black sheets are shaded a little lower. The demand for the lighter gauges of both black and galvanized sheets is not as heavy as is usual even at this quiet period of the year, but there is a better feeling reported in the heavier sheets and plates.

Supplies are greatly improved, and with many of the steel mills in the States closed down, wholesalers state that they are able to get better shipments than formerly and without the delay that latterly had become a regular feature.

Following are the prevailing quotations:

BLACK SHEETS

14 gauge	6 30	7 70
16 gauge	6 40	7 75
18-20 gauge	6 75	7 80
22-24 gauge	6 80	7 85
26 gauge	6 85	7 90
28 gauge	7 00	8 00

PLATES

10 gauge plate	6 20
12 gauge	6 25
14 gauge	6 30
16 gauge	6 40

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

An extra 10c per 100 lbs. is also charged on sheets 36 inches wide.

GALVANIZED SHEETS

Premier and Apollo

10 3/4 oz.	9 50	10 50
U.S. 26 gauge	9 10	10 20
U.S. 26 gauge	8 80	9 95

22 and 24 gauge	8 65	9 70
18 and 20 gauge	8 50	9 55
16 gauge	8 35	9 40
12 and 14 gauge	8 30	9 35

An extra is now charged on galvanized sheets, 10 3/4 oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Corrugated Sheets Unchanged

Toronto.

Stocks of corrugated sheets are in fair shape now and business is extremely light. Prices are unchanged at the new lists adopted last month, and following are the quotations:

CORRUGATED SHEETS—

Per 100 sq. ft.

No. 28 gauge	10 50
No. 26 gauge	11 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00
Less 7 1/2%.	

For 1 inch corrugation add 50c per square extra.

Ware Prices Hold

Toronto.

Business is reported quiet in enamelled ware though some wholesalers state that sales are better than is sometimes the case during the quiet period. The extremely mild weather has been favorable for the completion of new buildings, and it is believed that the resumption of building construction in the spring will see a revival in the demand for wares. Prices are holding unchanged and the following are quotations on some of the better known lines:

Bath tubs, 5 1/2 ft.	57 10
All Steel Enamel Baths, 4, 4 1/2 or 5 ft., net	\$16 25
Do., do., 5 1/2 ft., net	17 50

Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25

Some Brass Goods Lower

Toronto.

A few changes have been made in the prices of brass goods, and standard compression work is now quoted at 34 per cent. off list in place of 25 per cent. Stop and waste cocks are also lower and are quoted at 34 per cent. off. Other prices are holding. Business is quieter, but a fair amount of sales are being made for the period of the year. Following are market quotations:

Compression work, standard	34%
Fuller work, standard	30%
Bath cocks, compression	30%
Do., Fuller	30%
Flatway stop and waste cocks, standard	34%
Roundaway stop and waste cocks, standard	34%

No. 1 and 1, Fuller pattern	30%
Quick opening	28%
Emco J. D. Valves	10%
Emco Check Valves	10%
Webber Gate Valves	15%

Lead Pipe and Waste Lowered

Toronto.

Another reduction has just been made in the price of lead pipe and lead waste pipe and list prices are one cent lower. Lead sheets are still at same quotations, and solders are holding at recent declines. Business is said to be a little quieter, though a fair amount of sales are reported for the season. Present quotations are as below:

Lead pipe, list, per lb.	0 12½
Lead waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to discount of 10%.	
Lead traps and bends	Net

Plumbers' Oakum Lower

Toronto.

Reductions have been made on oakum, and plumbers' oakum is now quoted at \$4 per bale of 50 pounds. This is a reduction of approximately 15 per cent. The demand is light just now.

Boiler Tubes in Better Demand

Toronto.

A little better demand is being shown during the past week or so for boiler tubes, although sales are still below the average for the time of the year. Prices continue firm and show little change, though a slight revision has been made in one or two sizes. Present quotations are as follows:

BOILER TUBES—	Seamless	Lapweld
1 inch	\$28 00	\$.....
1½ inch	32 00	
1½ inch	33 00	
1½ inch	35 00	
2 inch	35 00	28 00
2½ inch	38 00	32 00

2½ inch	46 00	36 00
3 inch	54 00	45 75
3½ inch	70 00	46 00
4 inch	92 00	60 00

White and Red Lead Hold

Toronto.

No changes have been made in the quotations on red or white lead, either in oil or dry, and prices are held unchanged. Turpentine is quoted at \$1.30 in five-gallon lots, and raw linseed oil at \$1.15 for less than barrels.

Range Boiler Prices Held

Toronto.

No further changes have been made in quotations on range boilers and sales are reported to be normal in the standard sizes. Prices are the following:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	\$13 00	\$15 00
35 gallon	15 00	17 00
40 gallon	17 00	19 00
52 gallon	24 00	28 00
66 gallon	32 00	38 00
82 gallon	40 00	50 00
100 gallon	50 00	60 00
120 gallon	60 00	70 00

Small Demand for Waste

Toronto.

A smaller demand is being experienced for cotton waste, and prices are holding at recent declines. Present quotations are the following:

Above lines subject to trade discount for quant.	

Changes in Tool Prices

Toronto.

There have been some price changes in some tools used by the plumbing and steamfitting trade. The Billing & Spencer make of Stillson wrench has been reduced 10 per cent. in price. Victor hack saw blades are down 5 per cent. Some makes of hack saw frames have been revised and are from 5 to 10 per cent. lower. The National make of vises are showing new prices, and the Self Locking pipe vise, No. 71, is now quoted at \$5 list; No. 72, at \$7.50, and No. 73, at \$11. The discount from list is 15 per cent.

Quiet Tone to Scrap Market

Toronto.

A quiet but slightly firmer tone has been evident in the waste material market, and the consuming demand has not improved. Non-ferrous scrap metals have stood still, dealing has been small and prices are unchanged. The undertone, however, has been uncertain, due, it

is stated, to the virgin situation. The following are nominal quotations for fair sized quantities:

WASTE MATERIAL

No. 2 busheling	13 00
Stove plate, per ton	19 00 20 00
Scrap pipe	8 00 9 00
Yellow brass	6 00 7 00

Overshoes, lumbermen's rub. boots	2 00 2 50
Bicycle tires	0 75 1 25
Automobile tires	0 50 1 00
Tea lead	2 00 2 25

Ingot Metals—A Better Tone

Toronto.

Ingot metals are still quiet and practically unchanged, although a little better feeling is prevailing and the undertone is firmer. Copper is showing a better tone due to an expanding demand.

TIN.—Prices are holding unchanged on tin but very little business is reported. London markets are decidedly weak in this metal and there is said to be an entire absence of demand. Prices there went to the lowest levels they had reached since 1914, but recovered later. Local quotations are holding at 43 cents.

COPPER.—An improvement is reported in outside markets on copper, and though the increase in demand is yet small, producers' prices are said to be firmer. On local markets there is little change and prices are holding at 19 cents for casting copper.

LEAD.—The lead market is still dull and quiet and little change has taken place in prices. The demand in outside markets is reported as irregular and fitful with little buying on the part of consumers. Markets in London are weaker. The price here is unchanged at \$7.

SPELTER.—Little change is shown in spelter, and home and outside markets are quiet and dull. Buyers seem in no hurry to place orders. Quotations locally are holding at \$7.

ANTIMONY.—The market for this metal is not showing any life and with little or no business offering quotations are made at 8 to 9 cents.

ALUMINUM.—Home markets are reported quiet in this metal, but a better inquiry is noted in U. S. markets and a firmer tone is evident than has been the case for some months. London prices are holding firm. Quotations here are still 35 to 37 cents.

MUELLER

1½ inch Waste and Overflow A-2435

This **MUELLER** connection, because of several late improvements in construction, can be installed much quicker than any other make. The waste elbow and overflow are cast brass, overflow strainer is cast and the waste strainer is of heavy wrought brass.

Toronto By-law Requires 1½ inch Waterway

Toronto City By-law demands that 1½ in. waste and overflow be used, as being perfect in construction, capable of the best service and entirely satisfactory in every way.

Correct designs, the right raw materials and a fine precision in workmanship, make **MUELLER** Brass Goods stand every test and give dependable and enduring service.

Write for catalogue and prices. Mail orders given immediate attention.

WINNIPEG MARKETS

WINNIPEG, Feb. 12.—There are very few price changes in plumbing and steamfitting supplies to record. Among the lines on which a change has been made is solder. Prices on this commodity have declined 3 cents per pound. Boiler tubes are also reduced about 4 cents per foot. Canada plate is lower and is being quoted at a decline of \$1.75 per box. Business is still quiet, and though it shows signs of picking up it is not as good as it might be.

Solder Down Three Cents

Winnipeg.

The price of solder has been dropped another 3 cents per pound and is now quoted at 31 cents in case lots and 32 cents in less than case lots. Tinkers' solder is 45 cents per pound.

Canada Plate Marked Down

Winnipeg.

The price has been changed on Canada plate this week. Prices have been nominal for some time past and the present quotation is approximately \$1.75 lower than previous price. Shipments are coming in better and conditions are looking brighter for this line. The prices are as follows: Ordinary—18x21 \$11.50 per box, 18x24 \$11.50 per box, 20x28 \$11.75 per box.

Boiler Tubes Reduced

Winnipeg.

The price on boiler tubes has been low-

ered and they are selling for 3 cents per foot less. The present day prices are:

1½ in., 28c per foot; 2 in., 28c; 2¼ in., 34c; 2½ in., 35c; 3 in., 45c; 4 in., 65c.

Pipe Shipments Better

Winnipeg.

Prices have not changed on wrought iron pipe and there is no indication of any change. Shipments are coming in more frequently and stocks are now in better shape. Sales are light at the present time. The prevailing prices are as below.

		Per 100 ft.	
		Blk.	Galv.
¾ in.	\$ 6 21	\$ 8 69

	144 90	177 30
	188 10	229 50

CONSERVATION OF HEAT

Toronto.—That factories which use coal for fuel are losing thousands of dollars every year where superheaters and economizers have not been installed was the main issue emphasized by F. A. W. Taylor in an address given at the Engineers' Club. With the high price of bituminous coal, the speaker said, manufacturers paid too little attention to the conservation and development of heat, a very large percentage of which goes up the chimney as waste would be a comparative saving in fuel if factories were closed all day Saturday, and advocated the buying and selling of coal by British thermal units. "Then," said the speaker, "we would not be paying for the dirt and slate that we are obliged to shovel into our furnaces."

URGES REDUCED DRAINAGE TAXES

Winnipeg.—Drainage taxation should be levied on any land, the waters of which are conducted by an artificial channel to a natural outlet, and the tax should be determined on the basis of benefits derived and the value of the land, it was decided at a meeting of the Red River valley improvement and drainage association.

A resolution to this effect was passed

after a lengthy discussion on the report of the drainage commission presented by J. G. Sullivan.

Mr. Sullivan pointed out that some were paying taxes out of proportion to the benefits derived from drainage, that both the Dominion and provincial government lands benefited did not bear their share of the cost of drainage, and that the proportion of municipalities outside the drainage district received a benefit from the construction of roads connected with ditches for which they did not pay.

"The people of Manitoba municipalities are suffering from inefficient drainage. In drainage district No. 2, comprising 441,017 acres, large areas are hooded every year and millions of dollars damages is done to crops," Mr. Sullivan said.

FILTERED WATER BASIN ADVOCATED IN CHATHAM

Chatham, Ont.—Ex-Mayor W. A. Hammond was elected the chairman of the Water Board at the first meeting for the year. Ex-Mayor Westman, former chairman who was re-elected to the board this year, announced that he would continue to advocate Lake Erie water for Chatham. In a lengthy report upon the work done in extending and improving the present waterworks

plant, City Engineer Fuller reported that the average cost of pumping a thousand gallons of water during the past year was 11.1 cents. The engineer also suggested that in order to improve the work of chlorinating the water, a filtered water basin would have to be erected and he advocated the immediate construction of it.

1921 MAY BEAT BUILDING RECORDS

Toronto.—City Architect Price looks forward to 1921 being the biggest building year in the history of the city.

"I am informed by an architect," he said to-day, "that there is \$35,000,000 of work in sight."

The largest building year was 1912 when the permits issued totalled \$27,401,761. Next came 1911, with \$24,374,539, and then 1913 with \$27,038,624. There was a drop to \$20,694,288 in 1914. During the past five years the permits issued represented the following value: 1915, \$6,651,889; 1916, \$9,381,671; 1917, \$7,163,556; 1918, \$8,535,331; 1919, \$19,819,436.

FILTRATION PLANT IN PETERBORO

Peterboro, Ont.—The council has passed a by-law authorizing the borrowing of \$350,000 to be used in the purchase of a site and the erection of a filtration plant.

Toronto, Ont.—A Bldg. Committee is being formed to deal with erection of Church and Sunday School for St. Monica's Anglican Church congregation. Rev. Robert Gay, pastor, 88 Prust St.

NEW CANADIAN PATENTS

(Continued from page 22)

ondary combustion chamber, a smoke chamber overlying the secondary combustion chamber and the central water chamber of the top section, a water chamber overlying the entire smoke chamber and communicating with the outer water chamber of the intermediate section, two water conduits leading from the central water chamber of the intermediate section and extending through the secondary combustion chamber and the outer water chamber of said intermediate section, water pipes connecting one of said water conduits to the outer water chamber of the fire pot section and connecting the other of said conduits to the outer water chamber of the top section, other water pipes connecting the outer water chamber of the intermediate section to the outer water chambers in the fire pot and top sections, communicating water passageways between the central and outer water chambers of the top section, and a horizontal smoke outlet leading from the smoke chamber, said water pipes being provided with unions for separably connecting the fire pot and intermediate and top sections and holding the same in assembled relation.

Pipe Fittings

Dominion Wide Recognition

M Brand Pipe Fittings give a service and satisfaction that will invariably get you re-orders and much new business as well.

A trial of the goods will prove this claim.

Malleable Fittings with this brand mean fittings made of *Air Furnace* Refined Iron, reamed and tapped to gauge with perfect threads.

Cast Iron Fittings with this brand mean fittings made with iron of high tensile strength—proper proportions and correct tappings.

Recessed drainage fittings. Standard and extra heavy flanged fittings and flanges. Galvanizing malleable and gray iron castings of all kinds.

International Malleable Iron Co., Limited
Guelph, Ontario, Canada

“A voice roared out, hoarse, profane;--the Mate's voice: ‘Thought you'd try it again, did you, you dashed beach-comber. I'll teach you, and when I find the dog that left that rope for you I'll give him a leaf out of the same book. You bloody waster! I'll teach you! I'll—!’”

This is an extract from Frank Packard's "Pawned," which commences in the February 15th issue of MACLEAN'S MAGAZINE.

At the period in the story that this is written the leading character is a

beach-comber in the South Sea Islands.

Three months later, John Bruce is stretched at full length on a luxurious divan in the most sumptuous apartment of the Bayne-Miloy, New York's newest and most pretentious hostelry.

How had this wonderful metamorphosis been made? It is a mystifying, enthralling, intriguing story, the secret of which you can only get by reading every instalment of Frank Packard's wonderful yarn.

OTHER UNUSUAL FEATURES

“Are We Ashamed of Our Snow? No!”

By Charles Christopher Jenkins.

This tells the story of the conquering of the snow-drift problems by the railways of Canada.

“The Drama of Our Great Forests”

By Arthur Heming.

“Meeting of the Wild Men,” filled to the brim and overflowing with forest-lore.

“Solons of the 80's”

By Col. Geo. H. Ham.

Some episodes of the 80's and 90's when he and his confreres were recording Canada's political history.

“Soldiers' Settlements Making Good”

By Agnes C. Laut.

The wonderful success which has met the work of the Soldiers' Settlement Board in the West.

“The Cross in the Sky”

By R. T. M. Scott.

A psychic story; simply, forcefully told, and tinged with war atmosphere.

“The Queer Toff in Number 13”

By Leslie Gordon Barnard.

A human story of a brilliant man who almost “pegged out” until a wonderful love drew him back.

“The City of Peril”

By Arthur Stringer.

The concluding instalment of this melodramatic serial by one of Canada's favorite authors.

Morrison Valves

Your customers know the excellent reputation of Morrison Products and buy them readily.

Morrison Valves are specified on nearly all drawings for important contracts.

In every feature of design Morrison Valves are abreast of modern engineering progress.

These reliable fittings are made from perfect patterns, cast with the greatest skill, insuring evenly distributed material in the walls.

James Morrison Brass Mfg. Company
LIMITED

93-97 Adelaide Street West

TORONTO, ONT.

A Big Field of Prospects for the *Westco* Tankless Water System

In rural and suburban districts and on farms, the need of running water is urgent. The convenience and reliability of the Westco Tankless Water System appeals strongly to those people having electricity available.

Farmers everywhere are demanding a reliable, compact water system such as the Westco. In addition to this huge field of farmer prospects there are the suburban and outlying districts of cities and towns where the hand pump and well are still being used.

These Westco features make strong talking and selling points:

- (a) Requires no storage tank. Water is pumped direct from source of supply to taps.
- (b) Entirely automatic; open tap, pump starts at once; close tap, pump stops.
- (c) Inexpensive to buy, install and run.
- (d) Is vibrationless and silent in operation.
- (e) Has no gear, no belt, no valve.
- (f) Has only one moving part, and is self-lubricating.

But Above All—Thoroughly Reliable.

For small pipe sizes this compact, convenient little tool should be a part of your equipment. It will soon pay for itself in its saving of time and the accuracy of its work.

BORDEN-CANADIAN CO.

110 Church St.

Toronto

No. 6 Beaverette

Think of it—four pipe sizes: 1/4, 3/8, 1/2 and 3/4 in. threaded by one die stock, without changing dies! The Beaverette No. 6 is the only single die stock manufactured that can do this. Two sets of dies operated by the same control plate take care of the difference in thread pitch.

There are no dies to change, no loose bushings or other parts to bother with. Simply set the dial plate to the size desired and the handy, adjustable Beaverette No. 6 is ready to thread.

It Pays to Read the Advertisements

THE MAIN thing an advertiser wants to do is to tell you plainly just how and why his goods are worthy of your consideration. You can learn a great deal from that alone, because many things you see advertised are the things you buy and use in your regular daily life. By reading the advertisements you can become familiar with the names and read descriptions of the things that are best and most satisfactory.

This is a
"Q"
Foot Valve

And it Just **CAN'T** Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that **JUST CAN'T LEAK.**

Made in sizes from 1 to 8-inch.

Send for these folders, today!

Clip the coupon below and let us send you these two beautiful illustrated folders. They cost you nothing but will give you a world of information—a big help in solving your heater problems.

THE
Royal
automatic

The folder on the left tells how 25 to 40 gallons of steaming hot water can be automatically maintained in the home, ready for instant delivery at all connected faucets, by a tiny gas flame no bigger than the blaze of a match. No fuss. No muss. No complications. A simple and profitable installation that any plumber can easily understand.

The other folder describes our Marvel Non-Automatic, a combined range boiler and gas water heater that takes the place of the old "sore thumb" or side-arm contraption. The Marvel is the most economical non-automatic gas water heater made and gives absolute satisfaction.

Know these facts. They are important in your business. Clip the coupon now.

THE CLIMATE OF SASKATCHEWAN

IS THE SEVEREST TEST A SEWAGE DISPOSAL
SYSTEM CAN BE PUT TO.

READ THESE LETTERS

PERFECTLY SATISFIED.

COPY. Stalwart, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Gentlemen:

I am perfectly satisfied with your system of sewage disposal.
See no room for improvement; no trouble at all.
Certainly a boon for the farmer, and all.

Yours very truly,
(Signed) W. H. ETTER.

ENTHUSIASM

COPY. Box 45, Imperial, Sask., Nov., 1919.
Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

Re your letter of November 19th, 1919, regarding the Septic Tank to take care of my sewage disposal.

Well, I may say that it has been very satisfactory in every way.

It is two years last August since it was completed, and I have never had any reason to even open the man-holes. So you see it must be working perfectly, and as to freezing, it has not frozen as yet.

As far as I know there are no objectionable features about the system, and I am in every way well satisfied with the system.

There is no system that could work better.

I cover up the filter bed and the pipe between it and the septic tank, also the septic tank, with chaffy straw about 6 or 8 inches deep in the Fall, so the snow and straw keep the frost out.

Perhaps it don't need it, but I like to take no chances.

I remain, yours truly,
(Signed) WM. J. SHAW.

WORKING FINE.

COPY. Kenaston, Sask., Nov. 25th, 1919.
Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

In regard to my septic tank, I can highly recommend it, as it has been working fine ever since I have had the plant put in. It has never frozen nor has it refused to work.

I must say that the system has given every satisfaction.

Wishing you every success.

I am, yours very truly,
(Signed) HUGO TIETJENS.

HAS NEVER TOUCHED IT SINCE INSTALLING.

COPY. Imperial, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

The system I have has been working satisfactory.

I have had nothing done to it since it was installed, and everything is in perfect order as near as I can see, in fact I have never given the system a thought.

(Signed) O. D. JOHNSON.

SATISFACTION AND THEN SOME.

COPY. Duval, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

The sewage disposal system is giving good satisfaction.

So far I have had no trouble with it. So far I am well pleased with it.

(Signed) JOHN MCKENZIE.

COULDN'T IMPROVE ON THE ANTHES SYSTEM.

COPY. Nokomis, Sask., November, 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

I have answered the following questions.

So far I haven't had one particle of trouble.

I haven't anything to suggest.

(Signed) G. H. HUMMEL.

Is the system giving every satisfaction? Yes.

Does the syphon valve work perfectly? Yes, so far.

Have you had any trouble with freezing? No.

Are there any objectionable features about the system? Not any that I have found.

QUITE SURE IT'S ALL RIGHT

COPY. Hawarden, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

In reply to your request, would say that we have found the septic tank very satisfactory, but we didn't lay enough of field tile to take care of seepage, as the sub-soil is very hard, and we were putting a lot of water through the system.

The syphon seems to do the work alright.

We had the main line freeze up coming near Spring, just in one place, about 6 feet of the main line where it runs close to my garage, and there was no snow lodged on that particular place.

I think the trenches should be covered with about 6 inches of horse manure in the Fall, so as to catch the snow, and there should be no danger of frost.

Hoping these few lines will be of some benefit to you.

I remain, yours truly,
(Signed) WEBSTER MOONEY.

PUT IT IN LATE IN THE SEASON, BUT

COPY. Cotton Woods, Nov. 28th, 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

In answer to yours I might just say that so far the Septic Tank system of sewerage is a success.

I have not as yet found any deficiency in either construction or operation.

We have used the system for about six weeks, beginning just one week before freeze-up. It did not even get a fair chance, but as yet it has withstood the frost, being covered to the depth of six inches with clay earth. I spread strawy fresh horse manure over the disposal bed to a depth of one foot, and everything is working well so far.

I would highly recommend this system of sewage disposal to every farmer.

Sincerely yours, W. THOMPSON.

HASN'T FROZEN YET—AND NEVER WILL.

COPY. Abernethy, Sask., Nov. 26th, 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

In reply to yours of the 25th inst., I might say that regarding my septic tank installed last June, I have had absolutely no fault to find with either the material used or the workmanship, as it has thus far given perfect satisfaction in every way.

As far as I know, the syphon valve is working perfectly, as it has never given any trouble.

It has never frozen so far, but we have covered the septic tank and disposal field with about 1½ to 2 feet of horse manure, as I wish to give it every possible chance.

I have no fault to find, or suggestions to make to improve this system.

I am, yours truly,
(Signed) WM. FOSTER.

VITRO

NOTROUBLE
TANK

For Your Satisfaction Insist on Vitro

ONE item in the long list of Vitro superiorities is the special, non-porous composition from which Vitro Tanks are so carefully molded.

An important item, it is true, but not the *sole* reason why Vitro has earned the title "No Trouble Tank."

The people and the plumbers of Canada know that their satisfaction and profit have depended on the selection of the Vitro Tank. They *should* know that the name Vitro implies a *complete tank*, fittings included, that years of experience have perfected.

It is this complete Vitro Tank that has made thousands of dollars for Canadian plumbers in the past, and it is this complete Vitro Tank that must continue to do so in the future.

There is only one Vitro Tank. It is made from start to finish to eliminate trouble. And it is made exclusively in Canada by

TINKER TOM'S TALKS

No. 300

Import Shipments Galvanized Sheets

Now comes the time when the air will be full of the advantages of buying cheap import sheets.

Do you know of anyone who imported Galvanized Sheets in the latter half of 1920 who made money out of it? If they all lost money in 1920 on such business, how on earth can anyone expect to do better in such times as are ahead of us.

The safe way is to use our big stock of Premier Galvanized Sheets as you need them. The price is right—and think of the service.

TINKER TOM

THOUSANDS

PLAIN
TALK TO THE
PLUMBING TRADE

of plumbers are in the same position as they were five years ago. Some always will be, while those who specialize on using first quality fittings combined with good service succeed.

A hardware merchant carries all the staple lines he can stock. He has a window display, and in this way encourages the public to buy. Why not the plumber? Very few have an attractive shop.

Why not set up a few Closet Combinations and have a complete assortment of Brass Goods to enable an intending purchaser to pick the articles he fancies? Telling him a certain fitting is what he wants, even if you do instal it, will not make him a satisfied customer.

B. O. T. Water Closet Outfits and Cee Bee Brass Goods are of first quality and good appearance. For durability they have no equal and have stood the test.

To be used on Hot Water Heating Systems

The above cut shows a No. 3 size Circulator. It consists of a specially designed pump having a cone-shaped motor. It is more efficient under the conditions met with in hot water heating systems than the centrifugal pump and in addition has large free areas so as to allow good gravity circulation through the pump when it is not in operation. The pump is driven by an electric motor connected to the wiring of a building and is operated by an ordinary switch.

The Circulator is generally installed in the main return line of the hot water heating system close to the boiler. It may, however, be installed in

the flow line from the boiler where this is more convenient.

The pump is made in 4 sizes, to take care of radiation up to 15,000 feet.

When the motor is in operation the Circulator forces the water through the system at a rapid rate so that the hot water from the boiler is carried up to the radiators with a loss of only a few degrees in temperature. It also forces the water to distant radiators where it is sometimes difficult to get gravity circulation. Write for more details.

"JARDINE" and "TOLEDO" Pipe-Threading Tools

Interesting Features

The Jardine and Toledo have no cams or gimcracks to get out of order, and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

The Dunham Radiator Trap consists of two major parts, a body and a cover holding the thermostatic disc. The man is tinning the disc before soldering it.

Sturdy Simplicity

Dunham Traps are made with extreme care and accuracy.

The result is *sturdy simplicity*. Nothing could be more simple than the two-piece Dunham Trap; and judging from service records of those in use since 1903, Dunham sturdiness is exceptional.

The Dunham Radiator Trap maintains a radiator at its maximum heating efficiency by permitting the passage of all air and water from the radiator and holding all steam within the radiator until it gives up its heat.

Electric Weld

Modern, Efficient, Scientific RANGE BOILERS

Tested and Proven in Service

Electric Welding is the modern, scientific way to make a seam of the highest efficiency. Electric Welding has come to stay. Electric Welding is efficient, and has been proven so in tests under severe, practical conditions. You will find it in use in many industries—in locomotive building, in welding broken castings, in making the most modern and improved tanks, etc.

With the Electric Weld no holes have to be punched or drilled to weaken the shell; no rivets, solder, laps or other unnecessary materials are needed to "bolster up" the Electric Weld.

Standard size—for new work or replacement.

Convention of Ontario Plumbing Inspectors

First Annual Gathering is Productive of Instructive Discussion
on Plumbing and Drainage Matters—Importance of Sanitation
in View of Modern Developments Emphasized—Entertained by
Plumbers' Club of Brantford

THE annual meeting of the Association of Plumbing and Drain Inspectors of Ontario, which has just been concluded at Brantford, Ont., was productive of much discussion along a number of lines of interest to plumbers as a class. The following cities were represented: Brantford, Hamilton, London, St. Catharines, Niagara Falls, Toronto, Oshawa, Peterboro and Ottawa.

presented an address to the visiting delegates, in which they expressed their pleasure and pride in not only having Brantford chosen as the first city to hold the annual meeting, but that the first president of the association was a Brantford man. The opinion was expressed that much good could come from the exchange of thought among the various inspectors gathered. Suitable words of appreciation were offered in reply by the secretary of the association. The banquet was followed with an auto ride around the city and a visit to many places of interest.

Many Plumbers Got Start in Brantford

At the first business session of the convention President G. W. Broomfield gave an interesting and instructive address in which he touched upon the historic nature of the city of Brantford and the objects of the meeting. He stated that the convention was being held upon the scene of one of the most ancient bathing places on the continent. The early Greeks and Romans had shown great concern for public health and had provided bathing accommodation, but it was optional whether or not bathing became the order of the day. Here it was different. In the old days everyone who passed from east to west had to take a bath here, and whether it was a knee, hip or plunge bath, depended on the depth of the river at the time. That the baths at that time were popular was easily seen from the fact that it now required four bridges to provide for the traffic from east to west. He declared that the inspectors were now upon holy ground. At the time when Moses led the children of Israel from Egypt he led twelve tribes, and when Chief Thayendanega came to this promised land he brought with him six tribes.

The plumbing history of the city was easily seen from the men prominent in plumbing circles who had had their original training in this city. He named

J. Hewel, superintendent of plumbing at the Toronto Exhibition; J. T. Rich, of Noble and Rich Co., London; Lewis Dobbin, of Peterborough; J. Palmer, of Hamilton. All of these men had spent their early days learning the plumbing trade in Brantford, so that this city had had its famous men in this connection.

The first plumber here was Robt. Russell, a Scotchman, who came to this country with a party of his countrymen and settled near Toronto. From there

GEORGE BROOMFIELD

Brantford, Ont., re-elected president of the Association of Plumbing and Drainage Inspectors of Ontario at the first annual convention in Brantford.

W. H. MEADOWS

Toronto, re-elected secretary of the Association of Plumbing and Drainage Inspectors of Ontario at the first annual convention in Brantford.

he had come to Brantford and his coming here was the occasion of the opening of the first plumbing shop. He had been visited by delegates from all parts of the province, who came to see the Brantford plumbing shop and Brantford became the centre of the plumbing trade.

Committees' Reports Are Encouraging

Some general business matters were proceeded with and the various com-

Continued on Page 14.

Letters of regret at inability to be present were read from several members.

The social side of affairs was well attended to, the association, together with a number of master plumbers, being tendered a banquet by the city council, at which a number of addresses were delivered. The Plumbers' Club, of Brantford, through their president, W. L. Armour, and secretary, H. E. White,

Relation of Plumbing to Public Health

Sanitation and Hygiene Must Go Together in Improving Health Conditions—Closer Relation of Cities and Nations and Congestion of Modern Times Provides Big Problem—Sanitary Instruction More Necessary Than Legislation

By Dr. W. L. Hutton, M.H.O., Brantford, before Convention

THE relation of plumbing to public health and the vital factor that it constitutes in the making of provision for good health among citizens generally was the subject of a paper read at the convention of the Association of Plumbing and Drain Inspectors of Ontario by Dr. W. L. Hutton, medical officer of health, Brantford. The history of words such as sanatorium, hygiene and plumber were traced back to early historical times by Dr. Hutton pointing out that sanitation and hygiene go hand in hand, that they have one science in common and that these must work together for the health of mankind. It was pointed out that modern facilities for travel bringing cities and nations into closer touch have speeded up the transmission of disease.

Reference was made to early developments along the line of improved sanitary conditions, mention being made of the Public Health Act of 1848 in England. Dr. Hutton pointed out that the central idea of those days was that the condition of animal and vegetable matter gave rise to poisonous gases or to living germs, which were then distributed by the air. The aims of these early workers were clean streets and yards, clean houses, the building of sewers, construction of water closets.

Many Early Theories Were Wrong

"We owe to the efforts of the early English sanatoriums the cleaner streets which we have to-day, our good plumbing, our plentiful supply of good water, which, after use, is carried away by sewers," said Dr. Hutton.

"The plans of the early promoters of public health for civic betterment saved many lives and did much for human comfort and convenience, but we know to-day that many of their early theories were wrong, and as the legacy we have a mass of public misconception which has an unfortunate influence on preventive medicines. What are these false theories? One of them is that disease breeds in filth. Another is that all kinds of filth are dangerous, whereas only the secretions and excretions of the human and animals' bodies are dangerous. Another is the unfortunate theory that infectious diseases are usually air-borne, when they are usually spread by direct contact of person with person.

"The infectious diseases breed in the bodies of men and animals and they do not breed in filth. A great many people and educated ones, too, believe that filth

is a great source of disease. The garbage pail, the manure pile, the cesspool, rubbish, the public dump, are still in the eyes of the public as sources of sickness. I say to this plumbers' convention, don't go out and preach this kind of doctrine, because it is not true. The filth which is dangerous is that which carries the secretions and excretions of the human body, and it was because the early sanitarians removed this kind of dirt from contact with mankind that their successes in disease prevention were attained.

"The invisible dirt upon every common object which goes to the mouth or nose and the dirt of human fingers is the cause of more disease than the garbage dumps and manure piles inexistence.

Ravages of Congestion

"One of the great problems of to-day is how to rebuild the overgrown parts of cities and to repair the ravages wrought by congestion. Housing must continue to be as it has long been, a local and individual problem, for the very basis of family life is a place that one may call his own. To every family a house, to every person a room, is a great ideal for any community, but housing will never rise to a higher level than the people's desire for housing.

"Nothing perhaps has contributed more to the health and comforts of habitations than the introduction of running water with fixtures for its convenient

use, and drainage systems for getting rid of human waste.

"Competent plumbing inspectors are essential to see that such fixtures and conveniences are properly installed and that they are kept in good working order. I am one of those who believe that plumbing inspectors and all sanitary inspectors should receive special instruction in public health at some recognized school or college. It is only by spreading broadcast the truths of disease prevention that we are going to achieve the best results. A fountain will not rise higher than its head and in the long run the sanitary state of a community will be determined by the ideas of the people. Hence the greater need for popular education.

"Sanitary instruction is more important than sanitary legislation, and every plumbing inspector should be an apostle of public health. Preach the gospel that pure water is essential, that human excretions need to be carried away by sewers, but do not preach that disease breeds in filth. Preach the gospel that such diseases as tuberculosis, scarlet fever, smallpox, diphtheria and measles, all breed in the body of human beings and are spread directly, or almost so, from person to person, but do not preach that such diseases lurk in the air ready to pounce upon some unwary victim. If these truths are repeated often enough the public will learn the lesson that it is through persons and by things that most of the infectious diseases are spread."

OFFICERS FOR ENSUING YEAR

Officers elected for the ensuing year at the first annual meeting of the Association of Plumbing and Drain Inspectors of Ontario at Brantford include the following:

President—George Broomfield, Brantford (re-elected).

Vice-President—J. C. Palmer, Oshawa.

Secretary—W. H. Meadows, Toronto.

Treasurer—S. Daughtry, Ottawa.

Executive Committee—B. Kirk, Toronto; J. Bush, Toronto; David Wark, Hamilton; J. Wetherall, Peterborough; C. Young, London; H. C. Webber, Niagara Falls; D. McPherson, St. Catharines.

St. Catharines was chosen as the next meeting place.

CONVENTION OF ONTARIO PLUMBING INSPECTORS

(Continued from page 13)

mittee reports presented showed a very encouraging state of affairs. Even the treasurer's statement showed a good sized balance on the right side of the ledger. Papers were then read by a number of authorities on various subjects as follows:—

W. L. Hutton, M.D., medical officer of health for Brantford, on "Facts and Fallacies of Public Health"; H. Webber, Niagara Falls, on "Points From My Note Book"; Geo. Fitzsimmons, Toronto, on "Smoke Testing"; David S. Wark, Hamilton, on "Troubles in Our Trade"; A. G. Wetherall, Peterboro, on general information. Much interest was displayed by the members in these papers and many questions were asked in the discussion which followed the presentation of each one.

Smoke Testing Plumbing Installations

Would Rather Have Well Constructed System Which Leaked Slightly Than Poorly Constructed and Tight—Tobacco Stems Best Smoke for Testing—Testing High Buildings

Paper prepared by A. Fitzsimmons, Toronto, and read at the annual convention of the Association of Plumbing and Drainage Inspectors at Brantford, Ont.

THE subject of "Smoke Testing" which we will discuss, that is, if my paper will only raise enough vim or points for an argument, is not quite rightly named. I might state right here that the statements made, and opinions expressed, are my own, and not in any way official or an expression of the department's views. In my opinion the proper expression is an "air test, with smoke," using smoke just in the same relation in which you would use a colored water to test a submerged pipe or drain.

Now there may be some here who have never seen a smoke test applied and some who do not appreciate the value of the smoke test and its relation to the completed system of plumbing and drainage. To them I might say, there are two stages of the installation of the plumbing system. One, or the first stage, in which the pipe lines are constructed and tested with water. Supports for the fixtures put in and the pipe lines stayed in position. This stage is called the "roughing in" and is generally carried on before the building has been lathed and plastered.

Second Stage

The second or final stage takes place after the walls and partitions have been plastered and trimmed, floors laid and most of the work put in and the "roughing in" has been covered up. This second stage is known as "finishing." It is to this stage we come, to which the smoke test is vital. It does not matter how strict the inspector on the "roughing in" has been, or how conscientious the plumber has been, there are so many ways in which the almost perfect roughing in can and has been made a source of danger to the future occupants of the house. Sometimes this is occasioned by other trades. The laying of concrete floors and the settling of brick and stone walls have always taken their toll of the tile drains and these conditions are seldom found out without the aid of the smoke test. Another cause of damage to the concealed pipe is the carpenter and his little nail. The marble cutter, seeking a stay for his marble, very often locates a lead vent pipe, and it holds his brass wire and plaster of paris very tight but it does not stop the smoke from flowing out of pipe by any means. Then there have been cases where the builders have wanted an extra floor drain or so, and did not want to bother the plumber, drainer or inspector, so have

just cut an opening into the drain and drained the floor into the main drain direct, without trap or any other means to prevent the sewer air entering the house.

Defective Fixtures

Then there are the fixtures. Occasionally the traps of the closet bowls are defective, and no matter how anxious the plumber is to make a good job, it would be a superman who could tell the defective bowl without a smoke test.

Closely allied to the closet bowl is the rain water trap. Quite often I find them warped and tilted out of position and not holding enough water to provide sufficient seal to hold back the slight pressure the smoke machine exerts. All of the foregoing defects are entirely outside of and beyond the control of the plumber. Of course, the plumber makes an occasional mistake. Sometimes this is an accident. Sometimes wilful and sometimes pure ignorance.

If the joint he has been wiping is moved while still soft, or has not been properly tinned, we say "it was an accident." Or if the rubber gasket used in the closet floor flange connection has slipped partly into the bend you term it ignorance. But when you find vent pipes just slipped one over the other without an attempt made at a connec-

tion and closet floor connections made by flanging the lead over on to the floor without even putty, let alone a brass floor flange, then we must come to the conclusion that it was or is wilful.

On most of the large jobs there are the usual crop of openings (left open) for future use. Now before I go any further I am going to make a statement that should cause at least a slight discussion. "I would much rather have a system of plumbing and drainage designed intelligently, constructed in a workmanlike manner and leaking slightly, than a system poorly designed, poorly constructed and perfectly tight." And I mean this, all through roughing in as well as the finishing.

Finding the Defects

The only way to find the defects noted is to plug the soil pipe openings where they and the vent pipes have passed through the roof or rather after they have passed through the roof, also the fresh air inlet pipe, and apply pressure to the system. Just a little less than the pressure the trap seals will stand. This pressure would undoubtedly indicate upon a gauge if there was a leak. And if the leak was big enough you might hear it blowing. Now if you were to saturate the air inside of the system with, say, ether or an essence like peppermint then you add another sense to help you in your hunt for leaks. But sometimes the nose is out of working order and the alcohol of the ether might keep some of us too long at the first leak found. So we discard chemicals and essences and come back to the old reliable tobacco stems, which add still another sense to aid our ears and our organs of smell. For, though there is a chemical which both gives a powerful odor and a good vapor, which is easily seen, still for all practical purposes and serviceability I think tobacco stems the best element to use.

Whereas in Toronto the main trap and fresh air inlet pipe is used, the work of attaching the apparatus is simplified by connecting it to the fresh air inlet pipe. In places where the main trap is not used (and we have many such in Toronto), the usual way is to attach the machine to one of the stacks on the roof and if there is a clean-out fitting or hand-hole opening in the drain, you insert a rubber bag attached to a rubber tube into the drain, and after pushing or floating it down past any opening or

Continued on Page 16.

J. C. PALMER

Sanitary inspector of Oshawa, Ont., elected vice-president of the Association of Plumbing and Drainage Inspectors of Ontario, at the annual meeting.

Suggest Town-Planning Scheme

John W. Bruce, Organizer Plumbers' and Steamfitters' Union, Outlined Plans of Joint Council of Building Industry

DELEGATES from all parts of the province attended the opening of the first provincial town-planning and housing conference for Ontario, held in Toronto. Official welcomes were extended to them by his Honor the Lieutenant-Governor and Mayor Church, the latter referring to the Harbor Board scheme as an example of what the town-planning movement might achieve. A large and interesting collection of plans and photographs of various schemes which have been proposed or carried into effect in Canada and the United States was on exhibition in one of the corridors and was visited by a large number of visitors throughout the day.

John W. Bruce, organizer Plumbers and Steamfitters' Union, in the course of an address on "Why the Workers Desire Better Homes," gave the details of a comprehensive scheme which has

been prepared by the National Joint Industry, of which he is a member. The scheme has been endorsed by the National Committee of the Building and Construction Industries, and is in line with the ideals of the Trades and Labor Council. The scheme was one which the council felt should be fathered by the Federal Government, who would also be responsible for carrying it into effect. The scheme proposed that a loan should be floated by the Federal Government for \$250,000,000, to be known as "the housing loan," the proceeds to be used entirely for the purposes of housing, provision being made that anyone buying bonds should be able to apply them in part payment when they desired to build. The scheme also provided for the establishment of a Federal Housing Board, to be appointed by the Government, the workers to have full representation on such board.

SMOKE TESTING PLUMBING INSTALLATIONS

(Continued from page 15)

bypass, you inflate it to the size of the pipe it is in. The rubber bag used is usually a football or punch bag bladder. If there is only one stack in the system it is advisable to let the smoke appear at the opening before it is closed up tight.

Where there is not any opening into the drain and not any means of holding the smoke in the system, the only way is to pump against the pressure in the sewer. And sometimes there is quite a pressure.

Testing High Buildings

In testing very high buildings I find it easier to apply the test from the roof. The smoke is heavier than air and I think, fills the system quicker. You also escape the inquisitive mob which gathers and wants to know all about it. Of course, if the department wished to stage a publicity campaign we can always get a crowd in the down town district. Now, sometimes we meet with conditions which are sad and depressing, but on other occasions we meet with some circumstance or other which appears serious at first, but turns out a matter for rejoicing. One can hardly imagine how the fruit trade could become mixed up with the smoke test. It also disclosed a fact which calls for discussion.

In applying a test to a reconstruction job the plumber had the misfortune to drop part of the test plug down the stack. He asked me what to do. In looking over the work we discovered a 4x4 offset just below the roof. It suggested a possible place for the pieces to lodge in and so suggested to the plumber the advisability of getting a ball of some weight and passing it down the soil pipe. Looking round for some object to illustrate the size of the ball to get, I saw a plate of oranges. I picked one up and told him to drop it down the stack. Which he did and, behold, it brought the pieces of the plug with it. That saved the plumber a day's work. It also brought to light something else. That was, a large lump of loam or moss, or what was an accumulation of dust and leaves, which had gathered in the 4x4 offset. I have always thought the objection to an offset in a vent or soil pipe above the highest fixture more or less a fancy. But after finding this obstruction in an offset the second time I have come to the conclusion that the objection is quite correct. From these few remarks you can plainly see just how necessary a test of some kind is to complete the work of the water test in the roughing in. I have confined my remarks as much as possible to new work, the work in which we as inspectors are more often in touch with.

Important Points in Income Tax Law

THE following enumeration of points to be remembered in connection with the amended Income Tax Law in Canada will help merchants to a proper understanding of their responsibility. At the present time when there are so many complications in various forms of taxation it is advisable to have the main points condensed and available for reference, as has been done by the Royal Trust Company, who enumerate the points as follows:—

Tax payable along with return, April 30—at least a fourth. Better pay half, to allow margin for errors, which are heavily penalized.

Form for return must be asked for, not waited for.

Companies and Employers' lists and Fiduciaries' Returns to be in by March 31.

Deferred Instalments due June 30, Aug. 31, Oct. 31.

Tax reckoned on income of calendar year, Jan. 1 to Dec. 31; or on a Company's year ended during that calendar year.

Confiscation of all unreported income, if understatement exceeds 20 per cent.; or half, if from 10 to 20 per cent.

Tax increased 25 per cent. if return is late.

Six months in jail and \$10,000 fine for false statement.

Normal Tax, 4 per cent. on net taxable income up to \$6,000, and 8 per cent. beyond that.

Exempt from Normal Tax only:—
\$2,000 if married or with dependents, of certain categories;
\$1,000 if unmarried, no dependents;
\$200 each for children under 18.

Surtax on incomes beyond \$5,000—rising from 1 per cent. on first \$1,000 to 65 per cent. on all beyond a million.

Five per cent. of both taxes added if taxable income is \$5,000 or more.

Exempt from both Normal and Surtax—

War Disability Pensions;

Tax-free Bond Interest;

Gifts and Bequests;

Life Insurance Proceeds;

Certain incidental gains from turnover of capital assets outside the Taxpayer's regular business.

Expenditure to be deducted when calculating Taxable Income—

General Business Expenses;

Interest on Business Borrowing;

Taxes, Insurance, Repairs, Depreciation, Mortgage Interest—own residence excepted;

Payments for own Superannuation;

Carrying Charges on Securities, not exceeding income therefrom.

Deductions from Tax—

Income Tax paid to United Kingdom or other British Dominion, or to Foreign Countries if they reciprocate;

Certain payments under Business Profits War Tax Act and Special War Revenue Act.

Partners pay—not Partnerships.

Companies pay Normal Tax, not Surtax.

Executors, Guardians and Trustees pay for Beneficiaries unable to manage their own affairs.

Accrued and Undivided Profits are Taxable.

Married Women with Separate Incomes make Separate Returns.

Farmers make Returns on Special Form.

FIRST FLOOR.

the engineer should arrange his heating apparatus so that this room may be quickly heated.

The area of the pipe required for the dining room is 82 square inches, for the bedroom it is 32 square inches.

The area of a 12 in. pipe is 113 square inches, or almost that required by our figures for the dining and bedroom. On account of the short run we might set a 10 in. pipe here, but because this pipe is to serve rooms having a northern exposure we decide to use the 12 in. pipe.

Cold Air Supply

A supply of cold air from out of doors adds nothing to the efficiency of the heating apparatus unless vent ducts are so arranged that there will be an exhaust of air from the building.

If ventilation is not one of the requirements of the owner of the apparatus, it is a certainty that the outer air supply duct will never be used.

The plans before us do not show an air supply from outside. The air will simply be circulated within the building and will return to the furnace casing by way of return faces and ducts set as shown on the drawings.

To determine the area required for the cold air ducts we shall total the combined effective area of the warm air pipes and shall then make our cold air ducts equal to the figures so obtained.

At one time it was considered that the area of the cold air supply pipes should be about three-quarters of the area of those used for warm air. Experience has proved that such a system of proportioning was incorrect, and that the cold air ducts should be equal in area to those provided for the warm air.

In some cases it is well to provide a return face for every room in the building. In other cases a single return face may serve for several rooms.

This plan shows no cold air return face in any of the upper rooms, nor does it show a cold air face in the kitchen. Therefore, we must provide for the return of air by way of a face set in some other room.

One single pipe of the area required for the return of air from the upper rooms and the kitchen would be 18 in. in diameter. Such a pipe would be altogether too large for a single connection to the furnace; so we make the pipe which connects the furnace casing to the return face in the hall a diameter of 14 in. only, and provide an area in the other return pipes sufficient to make up the area deducted from the single 18 inch pipe.

The total area of the cold air returns should be equal to the combined area of the 14 in. pipe and the 12 in. pipes of the other two rooms on the ground floor.

These three return pipes do not provide quite the area required, but as the difference between the actual and required areas is very little, we decide to sacrifice some of the area required.

A face with an area equivalent to that of a 14 in. pipe must have a nominal

NEW PLUMBING GOODS

A NEW BLOW TORCH

The new and improved Double Blunt Needle Torches recently introduced by the Clayton & Lambert Manufacturing Company, Detroit, Michigan, are made in three sizes—two quart, quart, and pint capacity. The two-quart torch, No. 206, herewith illustrated, is of special interest to all those who require a heavy duty torch. The burner is extra large and powerful, the makers claim it produces about three hundred degrees more heat than any other blow torch, and either gasoline or kerosene can be used in operating it. The No.

Double Blunt Needle Torch

206 Torch is recommended by the makers for all kinds of heavy work such as is done in factories, railroad and machine shops and shipyards, and for automobile repair work such as heating and straightening axles and frames and brazing brake rods, etc., and for use outdoors in extremely cold or windy weather, for telephone, telegraph, railway and municipal construction work. Three very important features are said to be combined in the construction and use of the No. 206 Double Blunt Needle Torch, namely, maximum efficiency, minimum cost of operation and nominal expense for upkeep. This is due to the improved double blunt needle construction of the burner, which causes, it is claimed, perfect combustion of the fuel and at the same time prevents the vital parts of the burner from being destroyed by the carelessness of the operator. The lower needle is a shut-off and the upper a cleaner needle which automatically removes any obstruction in the orifice, thus making a clear passage for the gas under all conditions. The burner orifice cannot be enlarged by forcing the needle. Complete information together with a catalog showing the full line of Clayton & Lambert Torches and Fire Pots can be secured by writing the manufacturers at the above address.

area of 229 square inches. This area is more than provided in the 12 in. x 20 in. face shown on the drawing.

It will be noted that the cold air faces are placed in the floor. This is an objectionable feature, because the register boxes of faces placed thus so frequently become dust traps. The greater part of the "dust objection" to warm air heating comes because sweepings are allowed to accumulate in the air ducts. However, here is a case where the use of floor plates may not be well avoided, so we must install the floor registers. The plates can be set so that they may be easily lifted from their borders, and in this way provide some means by which the dust can be removed from the horizontal duct.

The cold air faces are connected to the furnace casing with a horizontal duct formed between the joist by means of galvanized iron joist lining.

Limited Head Room

Whenever it is possible to make sharp downward pitches in the line of the cold air return, this should be provided for; but when, as here, we have a limited head-room, we must be prepared to sacrifice some of the effectiveness of the heating apparatus to the convenience of an increase of head room.

Equal Distribution

The cold air return pipes should be arranged so that they will be equal in their distribution around the casing of the furnace. In many cases such an arrangement cannot be provided, and then it becomes necessary to approximate this arrangement as closely as we may.

The Smoke Pipe

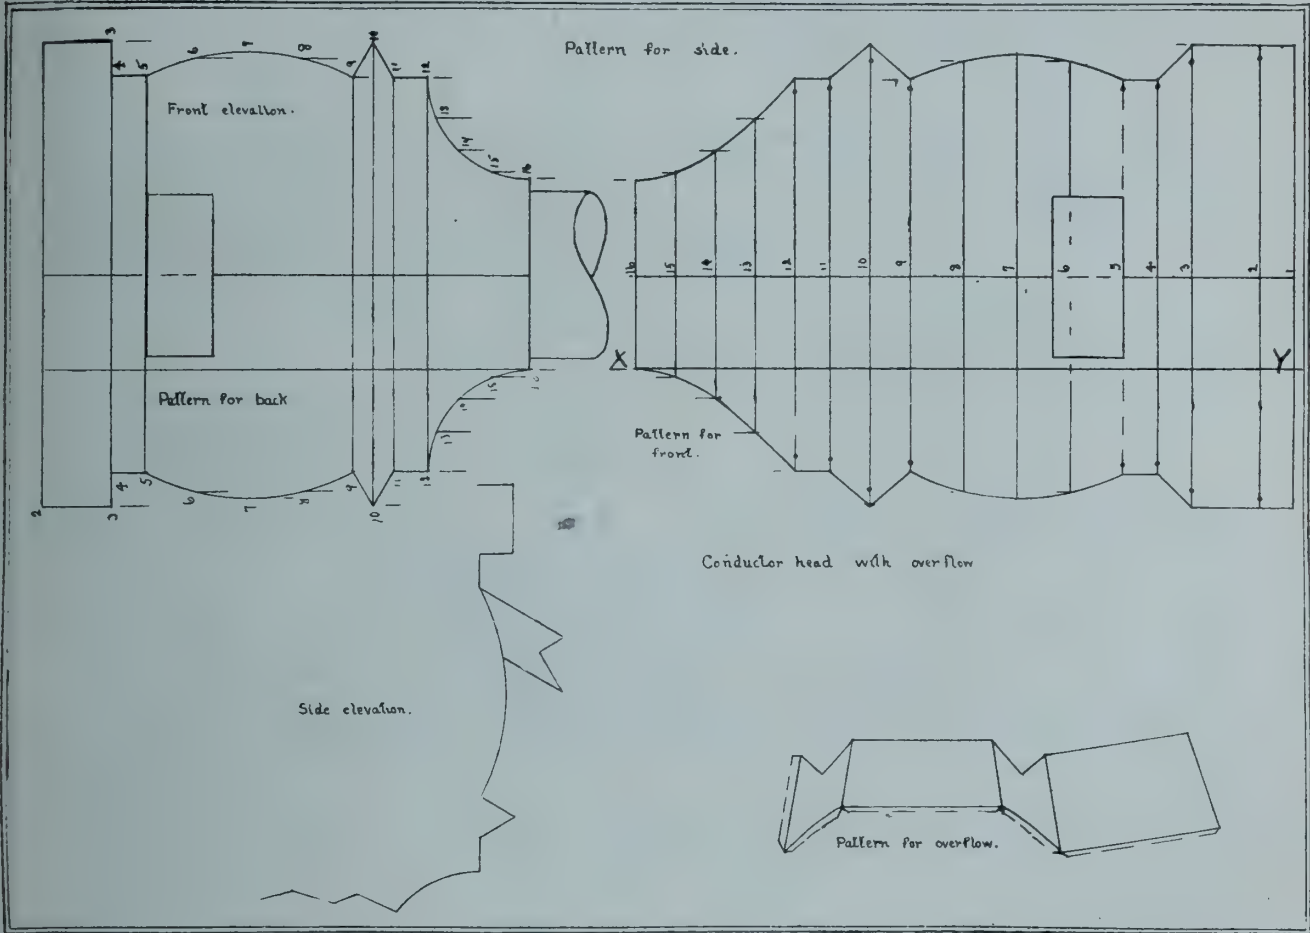

A long run of smoke pipe connected to a warm air furnace is not quite the objectionable thing that it is when connected to a hot water heater. Still, where combination boilers are introduced into the combustion chamber of a furnace having a long run of smoke pipe it is altogether likely that the long run may prove a detriment to the proper operation of the heating plant.

The smoke pipe should be fitted with a butterfly check damper, and also with one of the open type. We wish to state that the intelligent use of the open check damper will effect the saving of much fuel, but at the same time we wish to point to the fact that an open check damper is a rather dangerous thing to use when the furnace is not connected to a good flue, or when the furnace is so small that its gas proof (?) joints have been opened by frequent hard firing.

Pattern for Leader Head

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri.

SHOPS that do considerable gutter and spouting work always find it of interest to make leader heads of various designs. We here show a design that is very pleasing to the eye, from an artistic point of view.

It is also serviceable, either as a leader head or just as an ornament.

The front elevation shows the outline, and this is also a pattern for the back of head.

The mitre is treated the same as any ordinary square mitre. Divide all curved lines in equal spaces, number all points and bends as shown.

To set out the pattern, pick the girth spaces as 1-2-3-4-5, etc., and set on a line as 1-2-16.

Draw stretch out lines and from each point in elevation, project lines into stretchout; thereby crossing lines of similar number. This gives the points for drawing the outline of pattern.

The side pattern is produced by merely drawing a line through pattern just beyond the outlet as X-Y.

The overflow is merely a tube made rectangle, cut in at the mouth and planted over the opening as shown in elevation views.

Attention is called to the value of artistic designs from the point of view of business reputation.

There is a big difference between workmanship and craftsmanship. It lies in expressing one's personality in one's product—whether that product be a leader head, a cornice, or any other form of sheet metal work.

The sheet metal artisan or contractor who does neat and reliable work and who takes the trouble to design his patterns in such a manner as to please the eye, soon acquires a reputation for fine craftsmanship.

His work advertises him. His services are sought by people who appreciate neatness, artistry, and reliability.

The more he endeavors to exercise his craftsmanship in distinctive work of this kind the greater grows his skill and the more he is in demand. Logically, this will lead to prosperity and profit.

EDITORIAL COMMENT

EDITORIAL BRIEFS

CLOSE co-operation between plumbers and plumbing inspectors will help all concerned. Co-operation is needed to raise the status of the plumbing trade to the desired level. Much data of interest to plumbers concerning the work of the inspectors was given at the convention reported in this issue.

* * *

THOUGH expenditure on water purification in Canada is excessive, amounting to over \$7,000,000 spent by municipalities in Ontario alone during last year, it is fully justified when one notes that in the past decade largely as result of water purification in Ontario, typhoid fever has been reduced from 31.5 to 5.2 per thousand. All municipal plans for water purification must be passed by the Ontario Board of Health so that uniformity will be had and the most valuable counsel secured.

PROTECTING PUBLIC HEALTH

THE much discussed question as to the definite relation of plumbing to the public health was clearly dealt with by Dr. W. L. Hutton, Medical Health Officer of Brantford, at the convention of the Association of Plumbing and Drainage Inspectors, who pointed out that sanitation and hygiene have one science in common and that these must work together for the good of mankind.

In earlier days it was the opinion that all disease breeds in filth but modern science has proved that the spread of dangerous diseases is more directly traced to the secretions and excretions of the human and animal body and are more likely to be spread by personal contact than by the air. Infectious diseases breed in the bodies of men and animals, not in filth, so that it is plainly evident that modern sewage disposal systems for rapidly removing such matter are one of the most important agencies of modern times for the protection of public health.

What better reason, therefore, has the plumber of today to be in business than that of assisting to protect the health of mankind! The public must be educated to an appreciation of the importance of sanitary installations. The sanitary state of the community is governed by the ideas of its people, hence the need for more education. Instruction will be much more effective

in the situation than will be sanitary legislation. Plumbers can do well, therefore, to preach the gospel that disease does not as a rule lurk in the garbage pail, the rubbish pile, or the public dump, but in human waste, and that efficient means for disposing of this waste is the safest policy to be followed.

A LOST ART

THE difficulty of many master plumbers to attract the right type of apprentices to the trade is one of the problems of today. No doubt many readers will agree with the following opinion expressed by a Winnipeg master plumber:

Plumbing threatens to become a lost art around these parts.

The lure of the white collar and the "pinchback" suit is spoiling the Winnipeg youth for this ancient and honorable trade.

While menders of broken water mains and balky furnaces here are coining enough to make professional men wonder ruefully why they were not given out as apprentices instead of sent to college when they were young, jobs are being turned away every minute because men cannot be found to do the work or boys to learn the trade, he says.

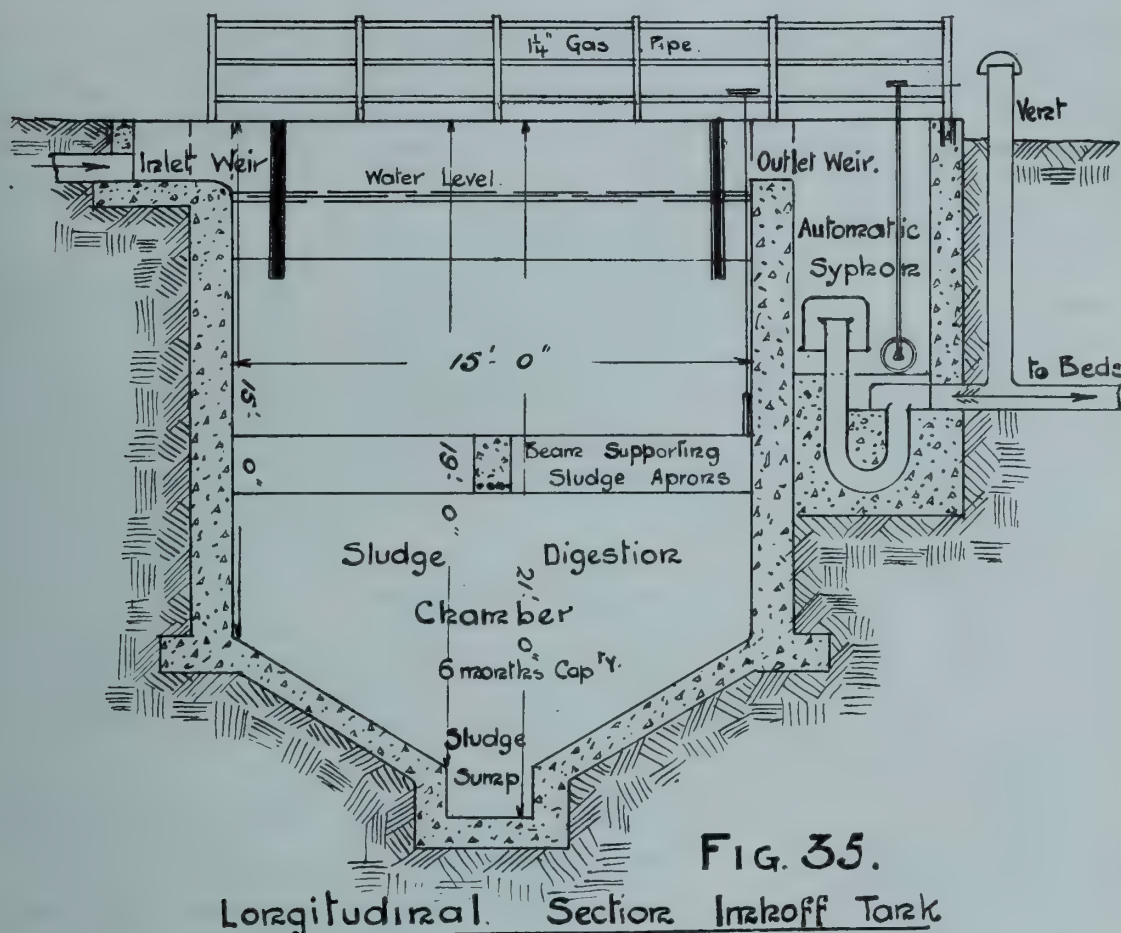

"Nowadays boys do not want to don overalls," he avers. "They want to wear collars and tight suits and waste their time away behind a counter in a department store or go into a bank at \$50 a month, instead."

He blames the girls and weak parents, mostly the girls. According to this craftsman the finical sex seem to prefer the lily-white hands of one who neither toils greatly or spins, to the broken nails of the wrench-user, and the smooth, pallid complexion of the office worker to the rough, red, if honest, face of the man who earns his daily bread by the sweat of his brow.

"Now, when I learned my trade 30 years ago, it was considered an honor for a girl to walk out with a real capable worker instead of an office stool polisher," he declares. "But the women today and present-day parents are one as bad as the other. I suppose it is the parents after all that are to blame. If they exercised a little more wholesome discipline they would bring up their children, both boys and girls, to know what is right and what isn't."

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights
—Keep the Entire Series Where It May be Referred to and Studied

Article No. 27 of the Series—Illustration No. 35

(Continued from last issue)

THE sketch plan and section illustrated (Fig. 35) shows an Imhoff installation constructed on an ideal location as regards profile and elevation of the land and it gives at a glance the whole process of treatment from the small screening chamber to the final effluent chamber before the purified sewage is discharged into the stream or ditch. The installation consists of a small screening chamber for removing the floating heavy mineral matter by cast iron screens and catchpit respectively, with valves and pipe by-pass for closing down the works during cleansing operations and diverting the sewage so as to prevent the same backing up should the works be out of commission at the same time allowing repairs to be undertaken without having to take care of the sewage flow as shown in Fig. 35.

From the screening chamber the sewage passes into the Imhoff tank which is divided into two separate

compartments by means of overlapping sludge aprons which allow the heavy suspended matter to pass through the slot into the sludge sedimentation chamber. At the same time this method of overlapping the one apron beyond the other prevents the escape of gases and the taking of sludge into re-suspension caused through the septic action or putrefaction and decay of the deposited sludge or suspended matter from the sludge digestion chamber.

This is one of the greatest drawbacks to the septic tank, especially when artificial means of filtration have to be resorted to for the final treatment of sewage as the fine suspended matter caused through the decomposition or splitting up of the sludge cannot be satisfactorily deposited again and passes off with the clarified tank effluent and in time clogs and chokes the filtration area, thus reducing its capacity.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Alexandra, Ont.—Curville & Chenier, plumbers, have dissolved.

Montreal.—J. A. Francoeur & Co., plumbers, have dissolved.

Sarnia, Ont.—A. Lawson, plumber, has sold out to Nelson & Sons.

OBITUARY

Toronto.—Daniel Glynn, a life-long resident of the city, died recently at his home, 962 Dundas Street. The late Mr. Glynn was sixty-three years of age, and had carried on a plumbing business at the above address for fifteen years.

AWARDED SEWER CONTRACT.

Toronto.—The lowest tenderer, the McKnight Construction Company, has been awarded by the Board of Control the Contract for the laying of sewers in the recently annexed land on the north side of Danforth Avenue and west of Woodbine Avenue.

MUCH DAMAGE FROM WATER MAIN BURST

Montreal.—Two boys were drowned, damage estimated at over \$100,000 done, thirteen families were rendered homeless and 28 persons were taken to Montreal General Hospital as the result of a burst high pressure water main feeding the east end of the city, which occurred recently.

SEWER CONSTRUCTION IN BRANTFORD

Brantford, Ont.—The construction of 16 sanitary sewers and three water mains will be recommended to the City Council and the Board of Water Commissioners as a result of a decision reached at a meeting of the Board of Health. The construction work is in the Bellevue district.

EXPLAINS SASKATCHEWAN RIVER WATER SCHEME

Moose Jaw.—Major J. A. McPherson, chairman of the Saskatchewan River Water Commission, recently addressed the Board of Trade regarding the Saskatchewan River water system. He stated that the pipe from the river to Belbeck would be 34-in. pipe, from Belbeck

to Moose Jaw 24 inch and to Regina 28 inch. This pipe line would be sufficient, the speaker stated, to give by gravity six to seven million gallons of water per day, while extra reservoirs and boosters could be installed as the requirements justified them, which would increase this supply to twelve million gallons per day.

The system would also be laid out in such a manner that in the event of breakdowns the reservoirs could furnish the supply reversely, the reservoir at Regina to take care of the Moose Jaw supply, while Eyebrow could supply Belbeck and so on.

The capacity of these reservoirs would be as follows: Eyebrow, 20 million gallons; Gilroy, 12 million; Belbeck, 20 million, and King's, 40 million.

INSURE ADEQUATE WATER SUPPLY FOR ST. THOMAS

St. Thomas met with smooth sailing with their legislation before the Private Bills Committee of the Ontario House.

St. Thomas, through City Solicitor Doherty, asked for approval of its big project to insure an adequate water supply for the next 50 years by the damming of Kettle Creek, and the committee put it through without a single objection.

ENERGETIC MAYOR OF MIMICO IS A PLUMBER

Mimico, Ont.—Mayor J. H. Doughty, who has worked so energetically on behalf of the unemployed of the district since his election as head of the council, is one of Mimico's successful business men. Ten years ago he came to the town as an employe of H. Heather & Son, to-day he is proprietor of a large and flourishing plumbing concern in Mimico. Mr. Doughty's slogan is "a progressive policy for a progressive town," and it is confidently expected by the citizens who elected him as their mayor that under his regime Mimico's industrial welfare will be well looked after.

Alkali Destroys Concrete Sewers

Report of Works Department of Winnipeg Shows 44 Miles of Sewers Are in Disintegration —To Use Segmental Tile in Future

WINNIPEG, Man.—Between 44 and 45 miles of concrete sewers under Winnipeg's streets are more or less disintegrated by alkali-saturated water and eventually must be replaced, department reports to the city authorities revealed.

It is reported that the city will not construct any more concrete sewers. Some of the concrete sewers have collapsed.

The city will consider a recommendation that future sewers be built of segmental tile or brick. Official records show that brick sewers last from 20 to 36 years.

Direct evidence that alkali was disintegrating sewers was obtained under Hart Avenue in 1910. The city's entire sewer system cost more than \$4,000,000. The length of sewers is 254 miles, of which 44½ miles are concrete.

Here are portions of the official reports:

"Sewers constructed of concrete are in a serious condition, several of them being so badly disintegrated that portions of the walls have collapsed and exposed the clay outside.

"Disintegration of the concrete sewers first was noticed in 1910, but was then considered to be due either to bad workmanship or poor material and not of serious importance. This theory has since been discarded as practically every concrete sewer in the city has become affected to a greater or less degree in the last few years.

"It now has been definitely established both by practical experiments and laboratory investigation that this condition is due to the presence of alkali salts in the soil in combination with the ground water."

Experts in the city hall explained that segmental tile, with which sewers in future are to be built, is burnt fire clay.

Cunningham & Co., of Paris, Ont., co-operated in the big "Dollar Day" sale held last Friday and had a fine display of plumbing goods and electrical fixtures

Doings in Ottawa and District

THE bill introduced in the Ontario Legislature by Hon. Thomas Crawford to amend the Municipal Act by providing for municipal inspection of all hot water and steam fitting plants, finds a warm supporter in Ottawa's chief plumbing inspector, S. Daughtry. Commenting on the bill Mr. Daughtry said he sincerely hoped it would become law, for then the public would enjoy a wide measure of protection, which it is at present obliged to forego.

At present, when complaints are received at the city hall from tenants of apartment houses, who are being cheated of their rightful amount of heat, the civic authorities are powerless to render any assistance. The same conditions apply in connection with the installation of plumbing fittings in buildings. Under the proposed act the officers in charge of the administration of it in municipalities would make it their business to see that the proper materials were used.

Plumbers Want Increase

The journeymen plumbers are out for another increase this year. They have

presented their demands for an advance from 80 cents per hour to one dollar. Last year they were granted an increase of 15 cents an hour, going from 65 to 80 cents.

More Frequent Garbage Collection

The city clerk has received a communication from the Ottawa East Municipal Association, supporting Ald. H. McElroy's motion, calling for a bi-weekly collection of garbage during the summer months and suggesting that the collecting be done during the night instead of in the day time.

Central Heating Plant

At a meeting of the Carleton County Council the Jail and Building Committee presented a report on the recent recommendation for the installation of a central heating plant for the court house and jail buildings, stating that the estimated cost was \$50,000. They had considered the matter fully, but were not decided yet whether to recommend going ahead with the work.

in both store and window. The sale was the most successful of several held by the Paris business men and this to some extent is accounted for by the co-operative advertising campaign that was carried out, whole pages being used, and each merchant paying a share.

H. T. Thornton, 25 Marley Place, London, Ont., is remodelling residence at a cost of \$3,000 and will extend heating system.

* * *

Plans are being prepared at Chatham, Ont., for a new nurses' home to cost \$50,000. Mrs. Campbell, chairman of the Board of Management, is interested in prices of heating and plumbing.

WINDSOR WATER BOARD TO SECEDE

Windsor.—Asked by the City Council to co-operate in presenting the city's application to the Ontario Legislature for withdrawal from the Essex Utilities Commission, Windsor Water Board unanimously complied with the request, in addition to passing a resolution endorsing the move to secede. The application, it is believed, will come before the Private Bills Committee of the Legislature shortly.

\$35,000,000 Worth

City Architect Price, of Toronto, is looking forward to 1921 being the biggest building year in the history of the city. He feels that the hesitation of the public has largely been a state of mind influenced by the attitude of the press.

The revised City Hall estimates of Winnipeg place the building operations contemplated in that city as \$14,000,000; the largest since pre-war days.

Building In Sight!

With housing accommodations taxed to the limit, companies clamoring for space in office blocks, and business concerns increasing their premises, facts indicate favorable opportunities for the sale of plumbing enamelware.

In any event, there are indications that 1921 will be a building year and the need for high-grade plumbing enamelware will be greater than ever. This building represents a definite amount of plumbing enamelware which will be needed. It means good business for plumbing men in 1921.

Let us pull together to encourage new installations for the betterment of Canada and the good of the trade during 1921.

Waterworks, Tenders, Construction, Contracts Awarded, Etc.

WATERWORKS, SEWERAGE, ETC.

Ottawa, Ont.—Construction of sewer between Fairmont and Bayswater Ave. is contemplated.

Sault Ste. Marie, Ont.—R. G. Campbell, clerk, will receive tenders till March 7, for construction of about 570 lin. ft. of 54-inch circular reinforced concrete pipe sewer and 2,560 lin. ft. of 40-inch reinforced concrete pipe, together with appurtenances. Plans at office of Engineer W. L. McFaul.

Vancouver, B.C.—Plans are prepared for sewer in Turner Street to cost \$11,000 and Georgia Street costing \$8,600.

Victoria, B.C.—Work on first unit of sewer construction costing approximately \$60,000 for city has commenced. F. M. Preston, Engineer.

TENDERS WANTED.

Edmonton, Alta.—Legislature has decided to proceed with erection of Home for Feeble-minded at estimated cost of \$200,000. Tenders will be called at an early date. R. P. Blakely, Prov. Architect, Parliament Buildings, Edmonton.

Fredericton, N.B.—F. N. Brodie, architect, 42 Princess Street, St. John, will call tenders for erection of addition to school estimated to cost \$35,000 for school board.

Montreal—New plans will be prepared and tenders will be called for church estimated to cost \$100,000 for Church of Philemon de Rosemount, Gauthier and Doust architects, 180 St. James Street.

Sault Ste. Marie, Ont.—Tenders will be received separately for each trade by H. F. McNaughton, Parliament Buildings, Toronto, until March 5 for Court House costing \$200,000 for Provincial Government. Plans at office of Sheriff, Sault Ste. Marie.

Victoria, B.C.—Revised plans for synod hall to cost \$110,000 for Anglican Church have been approved and tenders will be called by Architect J. C. M. Keith, Sayward Building, Victoria.

Winnipeg, Man.—Tenders will be called April 4th for erection of schools costing \$7,000 each in Birkenhead school district for Provincial Government.

Lepreau, N.B.—E. Hawken, Ottawa, Acting Deputy Minister of Dept. of Ma-

rine and Fisheries, will receive tenders until April 1 for erection of residence. Plans at Dept. of Marine and Fisheries, Ottawa; Agency of Dept., St. John, N.B., and at P.O. of St. Andrews, St. Stephens, Campobello and Lepreau. An accepted cheque equal to 10 per cent. of tender is required.

Montreal — Six residences costing \$9,000 each are being erected by Lancashire Land and Construction Co., 229 Ontario Street west. Tenders will be received for plumbing and heating.

Toronto—C. Cameron, 89 Raglan Ave., will receive tenders for heating and plumbing required for two residences costing \$7,500 each.

Toronto—E. H. Hobson, 153 Sherwood Avenue, will receive tenders for all trades required for erection of residence.

Montreal—S. Marotta, 195 St. Catharine Street, will receive tenders for plumbing and heating on contract for alterations to synagogue costing \$35,000.

Toronto—W. E. Whitten will receive tenders for plumbing and heating for residence costing \$20,000 for H. E. Manning.

Indian Head, Sask.—Tenders will be received until April 1 by Storey & Van Egmond, architects, McCallum Hill Block, Regina, for erection of school estimated to cost \$40,000. Plans with architect.

Kamsack, Sask.—Storey & Van Egmond, architects, McCallum Hill Block, Regina, have plans and will receive tenders until about April 1 for erection of addition to school costing \$25,000 for public school board.

Limerick, Sask.—Storey & Van Egmond, architects, McCallum Hill Block, Regina, have plans and will receive tenders until March 15 for extension to school costing \$15,000.

Merone, Sask.—Tenders will be received until about March 15th by Storey & Van Egmond, McCallum Hill Block, Regina, for erection of school costing \$15,000 for public school board.

Timmins, Ont.—H. E. Montgomery, clerk Town Council, will receive tenders until March 14 for construction of sew-

age disposal plant. Plans with J. F. Henderson, town engineer.

Moosomin, Sask.—George S. Page, secretary-treasurer, Moosomin Public School District, will receive tenders until March 10 for hot air furnaces for brick school building.

Radville, Sask.—Tenders will be received by Storey & Van Egmond, architects, McCallum Hill Block, Regina, until about March 15, for erection of addition to school estimated to cost \$25,000. Plans with architect.

Regina, Sask.—L. A. Thornton, City Commissioner, will receive tenders, no closing date set, for erection of public comfort station estimated to cost \$25,000 for city. Plans with building inspector.

Regina, Sask.—J. H. Puntin, architect, 308 Drake Block, Regina, is preparing plans for school estimated to cost \$190,000 for school board. Tenders will be called about April 1 by architect.

Regina, Sask.—Storey & Van Egmond, architects, McCallum Hill Block, will receive tenders until March 1 for alterations to building for stores estimated to cost \$10,000 for United Cigar Stores, Inc.

Shaunavon, Sask.—Construction of sewage disposal plant at estimated cost of \$150,000 is contemplated by town. F. G. Horsey, clerk.

Shaunavon, Sask.—Erection of hospital costing \$60,000 is being considered by Union Hospital Board.

St. Catharines, Ont.—W. H. Brown, Grand Central Hotel, will receive tenders for plumbing required for alterations to hotel.

CONTRACTS AWARDED

Montreal—Nap. Deguire, 52 Third Avenue, Lachine, has plumbing and heating contracts on St. Georges School, costing \$60,000.

Selkirk, Man.—Plumbing and heating contracts for Soldiers' Pavilion and Receiving Hospital costing \$469,000 for Provincial Government are awarded to James Ballantyne Co., Winnipeg.

Montreal—W. G. Bailey, 145 Bleury Street, has plumbing and heating contracts for warehouse costing \$60,000 for R. W. Bertram.

Montreal—Heating contract in alterations to office building costing \$110,000 for City and District Savings Bank, 176 St. James Street, is awarded to J. Brunet Co., 223 St. Lawrence Blvd.

Sudbury, Ont.—Wm. Grant & Hiscock, 29 Durham Street, have plumbing contract for erection of business building costing \$25,000 for Liberty Hall Co.

* * *

Toronto—A. Millar, 40 Kingsmount Park Road, has plumbing contract for store and apartments costing \$12,000 for I. Pimblett, 1464 Danforth Avenue. Pease Foundry Co. have heating contract on this building.

Windsor, Ont.—Windsor Hardware Co. has plumbing and heating contracts for residence costing \$4,000 for J. Thompson.

* * *

Toronto—Plumbing and heating contracts for restaurant and office building for Childs Co., New York, are awarded to Purdy-Mansell Ltd., Toronto.

CONSTRUCTION

Amaranth, Man.—W. W. Lachance, architect, 98 St. Paul Street, St. Catharines, Ont., is preparing plans for school for

Consolidated S.D. of Flora. A Kyrke Palin, secretary-treasurer, S.D. 1534, Amaranth, Man.

* * *

Amherstburg, Ont.—High School Board passed resolution authorizing preparation of plans for high school costing \$60,000.

* * *

Beauport, Que.—H. Laberge, architect, 85 Dalhousie Street, Quebec, is preparing plans for addition to school for school board.

* * *

Grande Prairie City, Alta.—Plans are being prepared for addition to high school to cost \$22,000 for Grande Prairie S. D.

* * *

Guelph, Ont.—Erection of Veterinary College costing \$60,000 and Dairy Building cost \$40,000 at Ontario Agricultural College is contemplated by Provincial Government, Department of Public Works, Toronto.

* * *

Niagara Falls, Ont.—C. M. Borter, architect, 102 Main Street, will prepare plans for a school for public school board.

* * *

Vancouver—Tenders will be called shortly for alterations and addition to building at estimated cost of \$40,000 for L. R. Steele Co., Ltd., Royal Bank Bldg., Toronto. Gardiner & Mercer, architects, 718 Granville St., Vancouver.

* * *

Forrest, Ont.—Plans are prepared for a school for school board. D. McKinley, secy.-treas., R.R. No. 5, Forrest, Ont.

* * *

Coleville, Sask.—Erection of a school to cost \$13,000 is contemplated by Coleville S.D.

* * *

Dundas, Ont.—Construction of public lavatories at cost of \$5,000 is contemplated by Park Commissioners. B. Racey, secretary-treasurer.

* * *

Kerwood, Ont.—Plans are being prepared for church to cost \$16,000 for Methodist Church congregation. J. H. Richardson, secretary.

* * *

Lakeview, Ont.—Tenders will be called shortly for alternative plans for a school for School Section No. 7.

* * *

Lowbanks, Ont.—S.S. No. 6, Moulton Twp., contemplates erecting a school. Grant Mitchener, secy., Lowbanks, Ont.

* * *

Milestone, Sask.—Erection of town hall at cost of \$20,000 is contemplated by municipality. By-law will be submitted. E. J. Harding, clerk.

* * *

Montreal.—Soeur de la Providence, cor, Fullam and St. Catherine St. east, contemplate alterations to building for

anti-tuberculosis hospital at cost of \$250,000. La Societe Catholique de Protection et de Renseignement will raise fund for this project.

* * *

Quebec, Que.—Plans for addition to Chateau Frontenac, costing \$2,000,000 for C. P. R. are being changed to include central tower of 16 stories. E. & W. S. Maxwell, architects, 360 Beaver Hall Hill, Montreal.

* * *

Regina, Sask.—Storey & Van Egmond, architects, McCallum Hill Block, Regina, have plans and will receive tenders, no closing date set, for alterations to building for United Cigar Stores Inc., H. O. 44 West 18th St., New York.

* * *

Rimbey, Alta.—Erection of a bank at cost of \$20,000 is contemplated by Merchants Bank of Canada.

Catalogues and Booklets

GASOLINE FIRE POTS AND TORCHES

Clayton & Lambert, Detroit, Mich, have recently issued a catalog listing and describing the various lines of fire pots and gasoline torches they manufacture. About 60 different styles and sizes of torches suitable for all kinds of uses, trades and jobs, and varying in size from a jeweller's or electrician's torch, 1¼ inch by 6½ inch, to a brazing machine with a ten gallon tank.

The new improved double needle torch recently introduced by Clayton & Lambert, is also shown and described. The booklet also includes a list of all extra repair parts for torches and fire pots.

* * *

PERFECTION GRINDERS

The Star Specialty Manufacturing Co., 227-233 W. Erie St., Chicago, Ill., have issued a catalog in which the Perfection grinders made by this firm are listed and described. A size and style of grinder is made for different requirements, and besides the belt driven grinders for mills, factories, shops, farms or garages using gasoline or other power there is also a full line of lighter grinders suitable for household and domestic use, as well as for mechanics, farmers, butchers, etc.

Perfection grinders are stated to combine the best of material, workmanship and finish, and each machine is thoroughly inspected and guaranteed to be perfect. The Star Specialty Co. is represented in Canada by T. Mortimer, 64 Wellington St. W., Toronto, Ont.

* * *

SEAMLESS BRASS AND COPPER TUBING

A price list has been issued by the Goldstein Mfg. Co., John St., Toronto, Ont., of brass and copper seamless drawn tubes. This firm specialize in small sizes and thin gauges and fancy shapes in brass, copper, nickel, silver and precious metals, and also in silver solders for all purposes. Alexander Gibb, 3 St. Nicholas St., Montreal, Que., is selling agent for the Goldstein Mfg. Co.

NEW CANADIAN PATENTS

(Issued for Plumbing and Heating Goods)

NO. 208,080. COMBINATION FAUCET

Tanas Budzinsky, New York City.

A combination faucet comprising an upper casing having inlet channels therein, a disc rotatably mounted on the underside of said casing, the mouths of said channel lying above said disc and at unequal distances from the centre thereof, means for rotating said disc, a stationary disc mounted underneath said rotatable disc and having holes therein directly under the mouths of said channels, and a plurality of spaced apart holes in said rotatable disc.

A combination faucet comprising an upper casing having inlet channels therein, a disc rotatably mounted on the underside of said casing, the mouths of said channels lying above the said disc and at unequal distances from the centre thereof, means for ro-

tating said disc, a stationary disc mounted underneath said rotatable disc and having holes therein directly underneath said mouths of said channels, and a plurality of spaced apart holes in said rotatable disc including a substantially circular hole and a substantially elliptical hole adapted to register with one of said holes in said stationary disc, and a second substantially elliptical hole adapted to register with the other of said holes in said stationary disc.

A combination faucet comprising a casing having channels therein, a disc rotatably mounted adjacent said casing, the mouths of said channels lying adjacent said disc at unequal distances from the centre thereof, means for rotating said disc, a stationary disc mounted adjacent said rotatable disc and having therein directly adjacent said mouths of said channels, and a plurality of spaced apart holes in said rotatable disc.

NO. 208,114. ELECTRICAL WATER HEATER

Joseph Charles Feldman, New York City.

In switch devices for automatic water heaters, the combination of relatively fixed and movable switch members, a tumbler to

which the movable member is attached, said tumbler including a telescopic bolt, a member acting against the bolt to move the tumbler, and means to cause movement of the bolt in and out of the tumbler during the movements of the tumbler.

In automatic switch devices for water heaters, the combination of relatively fixed and movable switch members, a pivoted tumbler to which the movable member is attached, said tumbler having a tubular socket, the axis of which is radial with respect to the pivot thereof, a bolt slidably fitted in said socket, hand controlled means acting against the bolt to cause it and the tumbler to move around the pivot to bring the movable member into or out of engagement with the other members, and means acting upon the bolt serving to move it along the socket while the tumbler swings around its pivot.

In switch devices for automatic water heaters, the combination of relatively fixed and movable switch members, a tumbler to which the movable member is attached and including a tubular socket, a bolt fitted slidably in said socket, a spring within the socket tending to project the bolt therefrom, a member acting against the projecting end of the bolt serving to move it and the tumbler to close the switch, means acting on the tumbler to restore it to normal position breaking the switch, and means acting upon the bolt to force it inward against the socket spring when the tumbler is drawn back toward normal position.

* * *

NO. 208,280. AIR EXHAUST FOR VAPOUR HEATING SYSTEMS.

Arthur P. Crosby and William T. Price, Minneapolis.

A return seal for a vapour system comprising a casing having parts in communication with a radiator and with a return pipe, a siphon mounted in said casing and communicating with said return pipe and having a restricted passage in the upper wall of the arch of the siphon above the level of the liquid when siphonic action begins and through which passage air is sucked from the radiator intermittently to break the siphon, and a check valve in the radiator port adapted to automatically check return flow into the radiator.

A return seal for a vapour system comprising a casing having ports in communication with a radiator and with a return pipe, a siphon mounted in said casing and communicating with said return pipe and having a restricted passage above the normal level of the water when siphonic action begins and communicating with said return pipe, said siphon having a second restricted passage communicating with said return pipe and located near the bottom of said casing, and a check valve in the radiator port adapted to automatically check return flow into the radiator.

An air exhaust for vapour or steam heating system comprising a trap having a siphonic discharge and a port for communication with a heat radiating means and a restricted passage in communication with the arch of the siphon and above the normal level of the liquid when siphonic action begins, the water of condensation in said trap normally forming a seal for said heat radiating means and the accumulation of an abnormal volume of condensation in said trap, as when said means is cold, setting up siphonic action intermittently to suck the air from said radiating means through said passage, the excess water in said trap co-operating with said passage to alternately make and break the siphon until the air is removed from said heat radiating means and a check valve in the port adapted to automatically check return flow into the radiator.

Systematizing and Managing the Plumbers' Office

Necessity of Safe Keeping of Records—Labor-Saving Methods
—Orderly Arrangement of Desk and Contents—Founded on
Information Secured by U.S. National Trade Extension Bureau.

D ID you ever study the habits of your journeymen regarding their kits and tools? Then, you have noticed how some men have their kits arranged so that there is a place for every tool, and each tool is in its proper place when not in use. Not only this, but these tools are so arranged that the ones used the most are the easiest to get at. On the other hand, some workmen throw everything into their kit helter-skelter, and every time they want anything they must handle every article in their kit. You will agree that workmen of the former class get more work done in less time, and with less trouble than those of the latter class. Workmen, such as those mentioned first, when starting on a job only need to take a glance at their equipment to know whether or not they have everything they should take with them. The man who lacks system, on the contrary, is always wasting time looking for the thing he needs or sending back to the shop for it.

Your desk and office tools and supplies present the same problem, and through lack of proper system and arrangement offer the same chance for loss of time and failure to accomplish results. This letter is written to offer suggestions to overcome these faults. It may be that some of the arrangements which are given will not fit your conditions. Do not let that fact stop you from arriving at some orderly arrangement of your desk and its contents. The old motto, "A place for everything, and everything in its place," if followed will do more towards getting work done, and things accomplished, than was ever dreamed of.

Remember when you were a journeyman, the care you took of a new tool; how you always put it carefully in some certain place; the time you spent keeping it sharpened and in perfect order. Apply the same care and thoughtfulness to your desk and desk tools, and see the results. It will start you exercising the same care and attention along other lines.

Make an inflexible rule in your office that every employee, who uses a desk, must, when leaving at night, clear everything off the top except the ink well and desk calendar pad. Then above all, see that you are not a violator yourself. To do this means to provide a place for everything, and when there is a place provided, the various articles of equipment will stay there when not in use. This holds true particularly with papers. There should be on the top of

your desk only such papers as are necessary for the matter you are working on. When you have other papers scattered over your desk your mind is distracted from the matter under consideration, and it does not get the attention it deserves. Either it is half done, or put aside to take up something else that seems more pressing. Thus you flit about from one thing to another, finishing nothing. Before leaving your desk see that every paper is removed from the top and placed in the proper place.

A good plan for checking up on the above system and to prove that every one has their papers in the proper place is as follows. Once each week have the stenographer, bookkeeper, yourself and other office employees empty every drawer in their desk. Then if it takes them more than five minutes to place all papers back in the drawers they haven't been following your rule.

Folders For Paper

The first thing we want to emphasize is that there should be a folder for the papers on every subject. In this way important papers do not get lost or misplaced, by being mixed up with subjects other than the one to which they pertain. Furthermore, when you start to work on some matter, the papers are laid on your desk in a folder. If you leave your desk it is very easy to slip the few papers you are using into this folder, and they are then covered up, so that no important information comes into the possession of outsiders, or those around your office who have not any business with such knowledge.

For the office having a bookkeeper and an estimator, or where the contractor does the estimating, we suggest a flat top desk 60 in. long and 48 in. wide. This is a regular stock size that can be purchased from any dealer in office furniture.

Let us analyze the various things found in the desk. We will begin with the left-hand or contractor's side:

Drawer No. 1, which is the top drawer on the left-hand side, is for the "Desk Organizer." It should always remain in the drawer, as any papers needed can be readily filed in it, or taken from it. The Desk Organizer has ten compartments with a place to insert a label showing the contents of each compartment. Do not get in the habit of making this a permanent file. It is intended only for papers being held pending a definite decision.

We suggest the following labels for the different compartments:

1. Incoming mail.
2. To sign.
3. Immediate attention.
4. To be attended to soon.
5. Material to be ordered.
6. Jobs to be started.
7. Quotations.
8. Monthly statements, list of outstanding accounts, etc.
9. Suspense.
10. Invoices to approve.

Have whoever opens the mail, put mail for your attention into the first section. Then, after going over this you will put the various letters in their proper sections. Letters to which an answer must be dictated go in the third section, and so on.

When your stenographer has your mail or other papers ready for you to sign, she puts them in the second section, and you always know where to look for them after being away from the office. In this way important letters concerning estimates and other private matters are not left on desks for people to read who have no business doing so.

In the third section, all other letters and papers that require immediate attention will be placed. This includes such letters as require the dictation of an immediate reply, as well as any other papers needing attention immediately. If some matter comes to your mind that you want to write some one about, or that you need some action on, jot it down on a piece of scratch paper, and put it in this section. In this way the writing of important letters and attention to important matters will not be overlooked.

The fourth section takes care of all matters that do not require immediate attention, but should be attended to as soon as possible. The same procedure can be followed with this section as was outlined for the preceding one.

Keeping Track of Material Needed

In the fifth section, put all papers pertaining to material that is to be ordered. Go through these papers every day, so that you will not overlook getting your orders in on time. When a salesman calls upon you, you can take these papers out, glance over them, and see if there are any notes concerning material which his house handles and obtain his prices upon your requirements.

The sixth section is to contain papers regarding jobs that are to be started. Whenever you come to lay out work for your journeymen, you then look over the

Continued on Page 36.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

PPRICE readjustments have quieted down a little and not so many changes are noted in quotations on plumbing and steamfitting goods. The chief features are some lower prices on lead products and declines in some markets on black and galvanized sheets. Ingot metals remain extremely quiet, but the tone is easier and pig lead and spelter are showing low levels on outside primary markets. Tin continues to fluctuate, but a decline on English markets is offset by a rise in exchange. Some lower quotations are made on boiler tubes, zinc sheets, solders, calking lead, oakum and boiler tubes. Prices remain unchanged on wrought pipe and fittings, and soil pipe, eaves-trough, radiators, range boilers, and compression goods are held unchanged. Another reduction has

been made on white lead in oil. The scrap metal market is still quiet with little change shown in prices. Enamelled wares show no changes in quotations.

In the primary steel markets there has been some price cutting by some of the independent mills in the United States, but reports from Pittsburgh indicate that it has not resulted in any appreciable increase of business. The lines most affected have been bars, plates, shapes and sheets, and it is stated that no lower quotations have been made on pipe.

Wholesalers and manufacturers report a smaller demand for many lines of plumbing goods, but prospects are bright and many contracts are already in hand for later building activity.

MONTREAL

MONTREAL, February 26.—Plumbing goods have a somewhat steadier market report for this issue. However, price changes are made on some lines, and all to a lower level. Black and galvanized sheets furnish the featured decline, black sheets are now quoted from \$1.25 to \$1.65 per 100 lbs. lower on the different gauges. U.S. standard galvanized sheets \$1, and English standard 50 cents per 100 lbs. lower on all gauges. Boiler tubes have a reduction of from 5 to 10 per cent., and oakum is now \$4.50 per 50 lb. bale. Zinc sheets are reduced a half cent. Wrought pipe, pipe fittings, bar iron and steel, compression goods and cotton waste remain unchanged in prices, while ingot metals are a little easier.

A better demand is noted on soil pipe and fittings, range boilers and enamelled ware, and prospects are very bright for radiators and boilers as many contracts are now in the hands of dealers for spring building. Business on the whole is much better in the last two weeks.

Lower Prices on White Lead

Montreal.

White lead in oil is reduced \$2 per 100 pounds, the new quotations being \$14.85 in less than ton lots.

Wrought Pipe Holds

Montreal.

There has been no change made in the price of wrought iron or steel pipe, list No. 48 being the selling price. Stocks are reported in good shape, while sales are reported light. Prices are as follows:

PIPE—WROUGHT Standard Butt-weld Pipe

	Per 100 Ft.		Steel		Gen. Wrought Iron	
	Blk.	Galv.	Blk.	Galv.	Blk.	Galv.
1/8	\$ 6 50	\$ 8 50	\$.....	\$.....

Metal Lath Prices Steady

Montreal.

Prices on metal lath remain unchanged with very little business offering. As this product is controlled entirely by the

building activity, sales might be expected small at this season. However, bookings have not been placed up to the present, compared with other years. Prices are as follows:

METAL LATH.

Painted—	
26 gauge, sq. yd.	0 42
24 gauge, sq. yd.	0 48
23 gauge, sq. yd.	0 57
Galvanized, 11c per sq. yd. extra.	
Discount 10%.	

Stillson Wrenches Lower

Montreal.

A reduction of 10 per cent. is made on Canadian made Stillson wrenches.

Fittings Show No Change

Montreal.

Pipe fittings remain unchanged, with a small business offering. Prices are also held at recent declines and are quoted as follows:

Bushings, cast	Less
Do., malleable	20%
Flanges	20%
Plugs	17 1/2%
Flange unions	7 1/2%
Malleable unions	32 1/2%
Nipples, black or galvanized up to 4 in.	50%
Do., 4 1/2 in. or larger	40%
Do., running thread, 4 in. and under ...	30%
Couplings, 4 in. and under	20%
Do., 4 1/2 in. and larger	Net list
POUND GOODS—	Black Galv.
Class B	0 20 0 28
Class C	0 13 0 20
Add 17 1/2%.	

Lead Products Sales Fair

Montreal.

Sales on the different lines of lead products are considered fair for this season of the year. Zinc sheets show a slight reduction in price, and are now quoted at 14 cents. Other prices remain unchanged and are as follows:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50

Note—Lead pipe is subject to a discount of 10%.

Lead traps and bends	Net list
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs. sq. ft., lb.	0 10¾
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 27
Do., strictly, lb.	0 25
Do., commercial, lb.	0 22
Do., wiping, lb.	0 22¾
Do., wire, lb.	0 35
Zinc sheets, casks	0 14
Do., broken lots	0 15½

Price Changes in Sheets

Montreal.

Lower prices are quoted on both black and galvanized sheets. These new quotations are made from present stocks in the hands of importers and jobbers, no lower levels being reached on the part of manufacturers and outside markets. The reduction on black sheets ranges from \$1.25 to \$1.65 per 100 pounds. U.S. standard galvanized sheets have declined \$1 and English standard 50 cents per 100 pounds on all gauges. Following are the revised prices:

PLATES—

10 gauge	6 25
12 gauge	6 30
14 gauge	6 45
16 gauge	6 55

BLACK SHEETS—

10 gauge	6 30
12 gauge	6 35
14 gauge	6 45
16 gauge	6 55
18-20 gauge	7 10
22-24 gauge	7 75
26 gauge	7 20
28 gauge	7 80

Sheets 36 in. wide, 10c. per 100 lbs. extra.

GALVANIZED SHEETS—

U.S. Standard—

10½ gauge	10 75
28 gauge	10 25
26 gauge	10 00
22 and 24 gauge	9 85
20 gauge	9 65
18 gauge	9 65
16 gauge	9 50

English Standard—

28 gauge	12 00	11 00
26 gauge	11 75	10 75
24 gauge	11 15	10 35
22 gauge	10 80	9 90
18 and 20 gauge	10 10	9 75

NOTE.—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Corrugated Sheets Quiet

Montreal.

Few sales are being made on corrugated sheets at present; however, with building practically at a standstill at this season, this is expected. Prices are unchanged, remaining at declines of last month, and are as follows:

CORRUGATED SHEETS—

	Per 100 sq. ft.
No. 28 gauge	10 50
No. 26 gauge	11 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00

Less 1½%.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

Boiler Tubes Reduced

Montreal.

A reduction has been made in the prices on boiler tubes, the decline affecting some sizes greater than others. From 5 per cent. to 10 per cent., however, covers the reduction made. A slight

improvement in the demand is shown during the last two weeks, but sales are still considered small for this season. Present quotations are as follows:

BOILER TUBES—

	Seamless Lapweld
1 inch	26 00
1¼ inch	27 25
1½ inch	26 25
1¾ inch	29 75
2 inch	29 25
2¼ inch	33 00
2½ inch	44 75
3 inch	49 25
3½ inch	63 50
4 inch	85 00

Iron and Steel Still Quiet

Montreal.

There is no improvement shown in the movement on the different lines of bar iron and steel. Sales are small and stocks are said to be light in the hands of the jobbers. There is no change in prices and they are as follows:

Common bar iron, 100 lbs.	4 20
Refined iron	5 80
Iron finish machinery steel	4 25
Mild steel	4 20
Single reeled machinery steel	6 80
Band steel	4 20
Spring steel	6 00
Sleighshoe steel	4 20
Tire steel	4 40
Toe calk steel	5 20
Harrow tooth steel	4 35
Mining tooth steel, per lb.	0 24½
Black Diamond tool and cast steel, per lb.	0 24½

NOTE.—Refined iron is approximately \$1.50 per 100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Flats, iron and steel, 3-1½ and thinner, 50c per 100 lbs. extra.

Waste Materials Quiet

Montreal.

The scrap market has a slightly firmer tone, with local prices unchanged. A very quiet time has been experienced in the waste material market, however this is thought to be well over by some dealers, and next month is expected to show a big improvement. Prices are the following:

Dealer's Buying Prices

Automobile tires	0 75
Yellow brass	0 07
Red brass	0 12½
Light brass	4 50
Scrap zinc	0 05
Lead, heavy	4 00
Lead, tea	2 50
Light copper	9 00
Heavy copper	11 50
Wrought iron, R. Rd., No. 1, per gr. ton	13 00
Malleable scrap (ton)	15 00
Pipe scrap (ton)	9 00
Heavy melting steel	15 00
No. 2, busheling	5 00
Boiler plate	12 00
Stove plate (ton)	20 00
No. 1 machinery cast	25 00

Sap Buckets Moving Well

Montreal.

The sap season being now well at hand, sales of sap buckets, spouts and syrup cans are being made in good volume. Following are the prices on both the buckets sized in the older method and those of Imperial measure, as some manufacturers are making them this season in 1 gallon, 1½ gallon and 2 gallon sizes.

SAP BUCKETS.—No. 7, \$20.13 per hundred; No. 8, \$21.88; No. 9, \$24.50; No. 12, \$26.25; No. 16, \$31.50.

1 gal., \$21.88; 1½ gal., \$26.25; 2 gal., \$31.50 per hundred.

Eureka, \$16.50; Perfection, \$25; Sterling, \$38 per thousand.

Square syrup cans, \$26 per hundred.

No Change in Eavestrough, etc.

Montreal.

No change has been made in the prices of eavestrough, conductor pipe or elbows since the new prices of last month. Dealers are well stocked on these lines and report that their agents are not placing their orders for spring requirements in as great volume as in former years. However, with prices slightly lower than last year, sales are likely to become larger in the near future, the consuming demand commencing in the early spring months. Present prices are as follows:

EAVESTROUGH—

O.G. Square Bead—

	Per 100 ft.		Per 100 ft.
8 in.	15 90	15 inch	28 80
10 in.	17 70	18 inch	36 80
12 in.	21 20		

O.G. Round, and Half Round—

Range Boilers More Active

Montreal.

More activity was shown in the past two weeks in range boilers than in the previous quiet months. Actual sales are still small, but bookings are now coming to hand and with a fair amount of building to commence a good amount of business is expected in range boilers along with other plumbing supplies. Prices remain unchanged and are quoted as follows:

RANGE BOILERS—

	Stand.	Ex.	Hvy.
30-gallon	13 00	15 00	
35-gallon	15 00		
40-gallon	17 00	19 00	
52-gallon	24 00		
66-gallon	32 00		
82-gallon	42 00		
100-gallon	50 00		
120-gallon	60 00		

Radiators and Boilers Quiet

Montreal.

Dealers in radiators and boilers are experiencing a quiet period at present. However, the outlook for spring is encouraging, many contracts already in hand for later building activities. One manufacturer stated to Sanitary Engineer that his firm had equally as many prospects at present as generally come to hand by the middle of March in other years. Prices show no change since the revised list at the beginning of the year and are as follows:

Revised radiator list prices fare for 1, 2, 3, 4, and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 40% for hot water and 41% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 30%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10. 50 off list.

Square or sectional hot water or steam boilers, 15-in., list price.

For Ontario Government trimmings add 5 per cent. to list.

Square or sectional water boilers, 19-in to 36-in., 2½ per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., list price. Ontario Government trimmings, add 5 per cent.

Square or sectional water or steam boilers, 48-in., list prices. Ontario Government trimmings, add 5 per cent.

Round steam boilers, standard trimmings, 5 per cent. off. Ontario Government trimmings, list price.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

No Change in Compression Goods

Montreal.

There has been no change in prices made on the different lines of compression goods. Business is seasonably quiet, and of a sorting order. Following are the present prices:

Compression work, standard	34%
Fuller work, standard	30%
Bath cocks, compression	25%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard..	34%
Roundway stop and waste cocks, standard	34%
Brass steam cocks, standard	10%
Radiator valves, standard	23%
Do., removable disc	38%
Globe, angle and check valves, standard..	5%
Gate or straightway	Net
Jenkins globe	10/7%

Cotton Waste Unchanged

Montreal.

Prices on cotton waste are unchanged from new quotations given last month. A slight improvement is noted in the last week on sales, and a gradual increase is expected as the season advances. Following are the quotations:

Cream, Polishing	0 22
WHITE	
XXX	0 18½
XX	0 17½
X	0 16½

Above lines subject to trade discount for quantity.	

Oakum Now 9c Per Pound

Montreal.

Plumbers' oakum is now quoted at 9 cents per pound, or \$4.50 in 50 pound bales. An extra cent is charged for broken bales.

No Change in Soil Pipe

Montreal.

Soil pipe continues quiet, although a slight improvement is noted over the previous quiet months. Prices are also unchanged, and the following are the present quotations:

SOIL PIPE (medium and extra heavy)—
2, 3, 10%; 5 and 6-inch, 15% discount.
4-inch, 20% discount.
8 inch, add 20% to list.

FITTINGS—

2 to 6 inch fittings, 40 per cent. discount.
8-inch, net.

More Activity in Wares

Montreal.

Sales of enamelled ware have increased during the past two weeks, and prospects for a good spring demand are in evidence. Present sales are confined to actual needs of the dealers, but the future building activities have a promising aspect. No change has been made in prices and they are as follows:

Sinks, roll rim, 18x30 in.	19 55
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$6 38 \$6 29 \$6 20
18 x 30	7 40 7 31 7 22
20 x 30	8 41 8 33 8 25
Bath tubs, roll rim, 4, 4½, 5 feet, 34 to	
30 in, wide	\$43 69
Bath tubs, 5½ feet	48 54
Lavatories—	

17x19" Apron F139 or P4045	13 00
18x24" Apron F154 or P3845 or P3847..	20 06
18x21" Apron F169 or P4205	14 96
17x19" Roll Rim, F241 or P4345	10 71

Closet Sales Also Improve

Montreal.

Relative to enamelled ware, closet sales also show an improvement over the past winter months. Following are present prices:

Closet, standard outfit	\$34 00
Do., with post hinge seat	35 00
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	37 00
Do., add for reversible trap bowl.....	1 25
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe.....	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	12 00
Do., reversible trap bowl, less spud....	13 25
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 60

Do., oak, or oak-vitro tank, with fittings, less seat	17 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies, less seat	19 00

Ingot Metals Slightly Easier

Montreal.

Conditions on ingot metals are stated to be still very dull. Quotations are a little easier on some metals, and while the price changes are not great, it is quite evident that improvement is still to be looked for.

TIN.—Tin has shown recent fluctuations up and down with little ultimate change in present prices. Production is being curtailed owing to present values. But with consumption light, this has no immediate effect on the market. Local price 38½ cents.

COPPER.—This metal is a little easier in New York, and producers are inclined to shade prices. Export trade is reported good, but local demand is very quiet. Electro 19 cents, casting 18½ cents.

SPELTER.—The market in spelter in the United States is still weaker, having touched the new low point of \$4.90. This means absolute loss in producing at this price, and the U.S. Government may have to impose a duty on this metal. The European market is fairly steady, and foreign spelter is offered at reasonably low prices. Local price 8 cents.

LEAD.—Lead is the weakest metal on the list, having touched £19 in London and \$4.15 in East St. Louis. Indications at present are that even a lower price may be reached. Local price easier at 6¾ cents.

ANTIMONY.—Little demand is shown for antimony, the market remaining dull and quiet. Local price 8 cents.

ALUMINUM.—This metal is also very quiet with nothing new to report. Local price 34½ cents.

TORONTO

TORONTO, February 26.—Prices are holding unchanged on most lines of plumbing and steamfitting goods, and few alterations are noted. The lead market continues to show declines, and though no further change has been made in lead pipe, calking lead is easier and solders show some lower quotations. Ingot metals are still dull and weak, and fluctuations are a daily occurrence in the tin markets. Copper shows no improvement while lead prices continue to recede. No changes have been made in the prices of wrought pipe or fittings, and quotations on soil pipe, eavestrough, radiators, range boilers and compression goods are maintained. Bar iron and steel show no further change and are quiet, and the same may be said of sheets and plates. The scrap metal market features no change of importance and continues quiet. Wares and closets remain unchanged from previous quotations and sales are lighter.

Although sales on most lines are now quieter a fair amount of business is reported for the past month, and the mild weather has enabled many building operations to be finished that would ordinarily not have been completed until later on in the season.

Wrought Pipe Firm

Toronto.

No price changes have been made on wrought pipe and list No. 48 is being used. Wholesalers stated that they have experienced a very good demand for the season of the year, although sales are falling off lately, but they expect an increase of business will be shown in a few weeks when the spring trade starts. Stocks are in much better condition now than they have been for a long time. Following are present quotations:

LIST NO. 48.

PIPE—WROUGHT

Standard Butt Weld Pipe
Per 100 Ft.

	Steel	Gen.	Wrought Iron

Do., running thread	20%
Couplings, 4-in. and under	20%

MALLEABLE FITTINGS

Class A	0 60	0 75
Class B	0 26	0 36
Class C	0 17	0 26

Soil Pipe Quiet

Toronto.

No change has taken place since the early part of the year in soil pipe prices. Sales have not been large, but business is reported moderately fair for the time of the year. Stocks are said to be in fair shape. The following are quotations on pipe and fittings:

SOIL PIPE (medium and extra heavy)—

- 2 and 3 inch, 10%.
- 4 inch, 20%.
- 5 and 6 inch, 15%.
- 8 inch, add 5%.

FITTINGS—

- 2 to 6 inch fittings, 40%.
- 8 inch fittings, plus 5%.

Bar Iron Unchanged

Toronto.

Business does not show much change in iron and steel, and sales are small at present. Buying has been largely restricted, it is believed, to immediate requirements, and the opening up of the spring activity will probably see a good demand as stocks are reported low and purchasing has been deferred. Prices show no quotable change, and are as follows:

IRON AND STEEL

Common bar steel, 3-16 in. and lighter...	\$ 5 25
Common bar iron, 3-16 in. and lighter...	5 25
Common bar iron, 1/4 in. and heavier	4 75
Angle base	4 75
Horseshoe iron	6 00
Tire steel	5 95
Band steel	5 25
Spring steel	12 75
Mining drill steel	28 00
Common cast tool steel	20 00
Sleigh shoe steel	6 00
Norway iron	15 00
Toe caulk iron	6 70
Hoop steel	6 00

Radiators Hold Firm

Toronto.

No changes have been made in discounts on radiators and hot water boilers, and 40 per cent. off list is still quoted for hot water, and 41 for steam. Business is quieter with smaller sales. Prices are the following:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
Discount 40% for hot water and 41% for steam.
Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 39%.

No Change in Wares

Toronto.

Prices are held unchanged on wares. Business is reported seasonably quiet now, but prospects are believed to be very favorable this coming season for an increased building construction and a larger demand for all lines of wares. The following are present quotations:

Bath tubs, 5 1/2 ft.	57 10
All Steel Enamel Baths, 4, 4 1/2 or 5 ft., net	\$16 25
Do., do., 5 1/2 ft., net.	17 50

All above list except lines marked net.	
Discount 20% off these prices.	

Closet Prices Holding

Toronto.

Sales continue fairly light on closets and fittings, and little change is noted. Prices are held unchanged and are as follows:

Closet, standard outfit	\$82 00
Do., with post hinge seat	33 00

17x10" Apron F139 or P4045	15 30
Do., white vitro, vitreous china or enamel-iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25

Do., for 3/4 in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 80
Do., oak, or oak-vitro tank, with fittings, less seat	17 50
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies, seat and cover...	19 00
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25

Conductor Pipe Dull

Montreal.

Conductor pipe and eavestrough are being held at the prices set at the beginning of this year. There is said to be no difficulty in filling orders from stocks which are ample. The demand is very light. Present quotations are the following:

TROUGH (Eave)

O. G., Square Bead and half round.	Size in girth:	Per 100 ft.	Per 100 ft.
8-in.		\$15 90	15-in. \$28 80
10-in.		17 70	18-in. 36 50
12-in.		21 20	
Less 50/10 per cent.			

PIPE (Conductor)

Plain, round or corrugated.	Per 100 ft. in 10 ft. lengths.
2 in., in 10-ft. lengths, list	\$18 40
3 in., in 10-ft. lengths, list	22 30
4 in., in 10-ft. lengths, list	29 60
5 in., in 10-ft. lengths, list	40 00
6 in., in 10-ft. lengths, list	49 00
Less 50/10%.	

Corrugated Elbows Hold

Toronto.

There is only a small demand now for conductor elbows and prices are holding unchanged. Quotations are as follows:

ROUND CORRUGATED OR CRIMPED ELBOWS

2 inch, list	\$5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 50%.	

Compression Work Held

Toronto.

The demand for compression work, valves and bibbs, shows little change. Wholesalers report a medium sale for standard goods. Quotations are holding at the recent changes and are the following:

Compression work, standard	34%
Fuller work, standard	30%
Bath cocks, compression	30%
Do., Fuller	30%
Flatway stop and waste cocks, standard	34%
Roundaway stop and waste cocks, stand.	34%
Brass steam cocks, standard	10%
Globe, angle and check valves, standard	5%
J. M. T.	10%
J.M.T. C.	20%
Gate or straightway	7/10%
Jenkins Globe	10%
Radiator valves, standard	28%
Emco J. D. Valves	10%
Emco Check Valves	10%
Webber Gate Valves	15%

Solders and Zinc Sheets Lower

Toronto.

Lead products are steadier and show no further change, except solders, which

are slightly shaded and are about one cent per pound lower. Zinc sheets also show a small reduction. Stocks in wholesalers' hands are reported to be ample for normal requirements. Sales are fair for the season of the year. Outside primary lead markets have developed a lower tendency, and the reductions this month on U.S. markets amount to \$7 a ton. The production, in spite of curtailment, is stated to be gaining on consumption. The following are the prevailing quotations here:

Lead pipe, list, per lb.	0 12½	
Lead waste pipe, list, per lb.	0 13½	
Do., over 8 in., list, per lb.	0 14½	
Lead pipe is subject to discount of 10%.		
Lead traps and bends		Net
Lead sheets, 4 to 6 lbs. sq. ft., in rolls, lb.	0 10½	
Cut sheets ½c to ¾c lb. extra and cut sheets to size 1c lb. extra.		
Solder, wire, lb.	0 36	
Do., 40-60	0 26½	0 23
Do., 50-50	0 29	0 31
Do., strictly, lb.	0 26	
Do., commercial, lb.	0 24	
Do., guaranteed, lb.	0 23	
Do., wiping, lb.	0 22½	
Zinc sheets, per lb.	0 16	
Calking lead	0 08	0 09

Range Boiler Prices Hold

Toronto.

Range boilers show no change in prices. A lighter demand is reported by wholesalers and stocks are in fair condition. Quotations are the following:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	\$13 00	\$15 00
35 gallon	15 00	17 00
40 gallon	17 00	19 00
52 gallon	24 00	28 00
66 gallon	32 00	38 00
82 gallon	40 00	50 00
100 gallon	50 00	60 00
120 gallon	60 00	70 00

No Change in Boiler Tubes

Toronto.

The movement of boiler tubes is reported to be smaller than it should be at this time, although improving slightly. Quotations are unchanged and are as follows:

BOILER TUBES—	Seamless	Lapweld
1 inch	\$28 00	\$.....
1¼ inch	32 00	
1½ inch	33 00	
1¾ inch	35 00	
2 inch	35 00	28 00
2¼ inch	38 00	32 00
2½ inch	46 00	36 00
3 inch	54 00	45 75
3½ inch	70 00	46 00
4 inch	92 00	60 00

Little Change in Sheets

Toronto.

Sheets and plates show very little change locally, either in quotations or demand. Business continues very light, although a slight improvement is reported in some quarters. Taken altogether, there appears little disposition to buy except for immediate needs and stocks on hand are reported to be lighter than usual. Reports from U. S. markets indicate that the independent mills there are cutting prices below the Industrial Board level, but without attracting any extra business of importance. Quotations here are the following:

BLACK SHEETS		
14 gauge	6 30	7 70
16 gauge	6 40	7 75
18-20 gauge	6 75	7 80

22-24 gauge	6 80	7 85
26 gauge	6 85	7 90
28 gauge	7 00	8 00

PLATES

10 gauge plate	6 20
12 gauge	6 25
14 gauge	6 30
16 gauge	6 40

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

An extra 10c per 100 lbs. is also charged on sheets 36 inches wide.

GALVANIZED SHEETS

Premier and Apollo

10¾ oz.	9 40	10 30
U.S. 28 gauge	9 00	10 00
U.S. 26 gauge	8 70	9 75
22 and 24 gauge	8 55	9 50
18 and 20 gauge	8 40	9 35
16 gauge	8 25	9 20
12 and 14 gauge	8 20	9 15

An extra is now charged on galvanized sheets, 10½ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Small Demand Corrugated Sheets

Toronto.

Sales on corrugated sheets are stated to be below normal at the present time. An increase in demand is expected shortly when the spring season begins. There has been no further change in quotations, which are the following:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	10 50
No. 26 gauge	11 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00
Less 7½%.	

White Lead Reduced \$2

Toronto.

White lead in oil has been reduced \$2 per cwt., and the new quotation is \$15.30 per 100 pounds, for less than ton lots. Red lead prices are unchanged.

Stove Bolts Reduced

Toronto.

Stove bolts have been reduced in price, and are about 12 per cent. lower. The new discount is 62½ per cent. off list.

Stove Pipe Wire Reduced

Toronto.

A reduction of 50 cents per 100 pounds has been made in the price of stove pipe wire, and it is now quoted at \$9.50 for No. 18, and \$10 for No. 19.

Bolts and Nuts Lower

Toronto.

New discounts on bolts and nuts show lower prices on these goods. Following are the new quotations:

Carriage Bolts, \$1.00 list, ¾ in., dia. and smaller, 6 in. and shorter	25%
Do., longer lengths	10%
Do., 7-16 in. and larger	15%
Machine Bolts, ¾ in. dia. and smaller, 4 in. and shorter	40%
Do., ¾ in. dia. and smaller, longer lengths	15%

New Wire Base and "Extras" Toronto.

A reduction has taken place in the price of wire, and the new base price for bright wire, and also for annealed, is \$5 per cwt. A change has been made in the gauge extras, and the extras for tinning, coppering, wrapping, etc., have been revised and are as follows:

Wire Gauge Extras—No. 0-9, Base; No. 10, 6c; No. 11, 12c; No. 12, 20c; No. 13, 30c; No. 14, 40c; No. 15, 55c; No. 16, 70c.

Soft Drawn Bright—No. 0-9 gauge, per 100 lbs., 25c extra; 10-13 gauge, 50c extra; 14-16 gauge, 70c extra.

Coppering and Liquor Finish—14 gauge and heavier, \$1; 15-16 gauge, \$1.50.

Tinned Wire—12 gauge and heavier, \$2; 13-15 gauge, \$2.50; 16 gauge, \$3.

Wrapping Tinned and Coppered—Papering, per cwt., 25c; Burlapping, 25c; Papering and Burlapping, 50c.

Oakum—No Further Change

Toronto.

Plumbers' oakum is holding at the recent reduction and is quoted at \$4 per bale of 50 pounds or 10 cents per pound in small quantities. The present demand is not heavy.

Cotton Waste Quiet

Toronto.

Cotton waste is holding unchanged. Stocks are stated to be ample, and sales are light. The present quotations are as follows:

WASTE	
Cream, Polishing	0 22

Ingots Quiet; Lead Lower

Toronto.

There has been little change in ingot metals locally. Exceptional dullness is reported in all metals, Lead is easier, and shows a decline, but other metals are practically at previous quotations.

TIN.—The tin market is very dull almost everywhere. The English market is very erratic; up one day and down the next. London prices showed an up trend which has not been maintained, and prices are expected to sag again. Sales are light and prices locally are unchanged at 43 cents.

COPPER.—The better interest lately shown in this metal has disappeared again, and the demand is light as a result of the intermittent character of business in manufactured copper. Price cutting on U. S. markets is not believed to have increased sales greatly. London markets are lower. Quotations here are holding at 19 cents for casting copper.

LEAD.—This metal continues to de-

MUELLER

Slop Sink Cock with Pail Brace

For factories, hotels and all public buildings this durable and serviceable fixture, A-2351, is highly recommended.

Made on the patented Rapidac principle, with detachable shank and adjustable flange, fully nickel plated and furnished with brass index lever handles, if preferred.

The supremacy of MUELLER Brass Goods is due to the fact that each article is expressly designed for the work it is to do and is then manufactured with the utmost care and precision to insure perfect performance and enduring service.

Write for catalogue and prices. Mail orders given prompt attention.

H. MUELLER MFG. CO., LIMITED, SARNIA, ONT.

Water, Plumbing and Gas Brass Goods and Tools.

American Factory at Decatur, Illinois, U. S. A.

Mueller Metals Co., Port Huron, Mich., Makers of "Red Tip" Brass Rod; Brass and Copper Tubing; Forgings and Castings in Brass, Bronze and Aluminum; Die Castings in White Metal and Aluminum; also Screw Machined Products.

cline in value. Reductions during the month on United States markets amounted to \$7 a ton. English markets, while steadier, are also easier and quotations are down to the average price for 1913. It is quoted here at \$6.50; a decline of 50 cents since last report.

SPELTER.—Business is quiet and dull in spelter. Outside markets are easier, but the demand is small. Prices here are unchanged at \$7.

ANTIMONY.—No changes are reported in antimony and quotations are held at 8 to 9 cents.

ALUMINUM.—No new features are shown in aluminum, and the market is listless. Prices remain at 35 to 37 cents.

Scrap Metals Still Dull

Toronto.

There is still a dull tone to the waste metal market. The demand for cast iron

scrap has been better than for steel scrap. Prices are practically unchanged. Red and yellow metals are in slightly better demand. Business is very light in rubber scrap. The following are nominal quotations for fairly large quantities:

WASTE MATERIAL		
No. 2 busheling	13 00	
Stove plate, per ton	19 00	20 00
Scrap pipe	8 00	9 00
Yellow brass	6 00	7 00
Red brass	10 00	
No. 1 machinery cast	24 00	25 00
Heavy melting steel	15 00	16 00

Heavy lead pipe	4 00	4 50
Old rubbers, boots and shoes ..	3 00	3 50
Overshoes, lumbermen's rub. boots	2 00	2 50
Bicycle tires	0 75	1 25
Automobile tires	0 50	1 00
Tea lead	2 00	2 25

WINNIPEG

WINNIPEG, Feb. 26.—There are few price changes to record in plumbing lines, and nearly all of them are to a lower level.

Among the lines reduced are bar lead and soldering coppers. Iron and steel, pipe and pipe fittings, sheets, both black and galvanized are holding steady in price. A slight increase in business is noted, and prospects are believed to be good for the coming season.

Saunders' Pipe Cutters Down

Winnipeg.

The price of Saunders' pipe cutters has been reduced and these are now quoted at 20 per cent. off list.

Lead and Solder Lower

Winnipeg.

Reductions have been made on pig lead, bar lead and block lead. Solder is also lower and the following are latest quotations:

Pig lead, per lb.	0 08
Bar lead, per lb.	0 08 1/4
Block lead, per lb.	0 08 1/4
Solder—	
Tinkers, per lb.	0 45
Wire, per lb.	0 45
Half and half, case lots	0 31
Do., less quantities	0 32

Soldering Coppers Lower

Winnipeg.

Prices have again been reduced on soldering coppers, and the following are the new prices quoted on these:

1 lb., per lb.	0 60
1 1/2 lbs.	0 55
2 lbs.	0 54
2 1/2 lbs.	0 53
3 and over	0 52

Pipe Prices Hold

Winnipeg.

No changes have been made in pipe prices, and supplies are now in better shape. Sales are rather light at the present. Following are quotations:

	Per 100 ft.	
	Blk.	Galv.
1/8 in.	\$ 6 21	\$ 8 69
1/4 in.	5 94	8 28
3/8 in.	6 12	8 46
1/2 in.	8 24	9 95
3/4 in.	10 22	12 51
1 in.	15 08	18 50
1 1/4 in.	20 43	25 02
1 1/2 in.	24 48	29 93
2 in.	32 94	40 28
2 1/2 in.	53 33	65 39
3 in.	70 07	86 40
3 1/2 in.	88 20	107 10
4 in.	104 40	126 90
4 1/2 in.	124 20	152 10
5 in.	144 90	177 30
6 in.	188 10	229 50

SYSTEMATIZING THE OFFICE

Continued from Page 29.

papers in this section and see what jobs you want to place them on.

In the seventh section, put your copies of Requests for Quotations, or any letters you write or receive regarding quotations in which you will be interested in the near future.

In the eighth section keep all your monthly statements, which your bookkeeper furnishes you regarding the condition of your business. In this compartment a list of all outstanding accounts should also be kept. Review

these frequently in your spare time. Make comparison of one month with another, see in what departments you are making progress, and where progress is not being made. Take steps to correct the existing evils, and in this way you will have the important points about your business always fresh and clear in your mind. See that your collections are kept up to the minute.

In the ninth section, put your papers concerning matters not covered by the preceding sections, which you may need in the near future.

In the tenth and last section, have all invoices placed that are to be approved

by you before being passed to the bookkeeper for payment.

The use of this Desk Organizer is the best thing we can recommend for keeping things in their place and out of the way. Too frequently we see men of many and great responsibilities going over a matter with their desk covered with papers. They stop to look for something, and immediately they are distracted by the sight of some other paper. They drop what they are doing, turn to the other matter, and thus they go from one thing to another, finishing nothing. When you start in on one thing, first be sure you have before you all the information available on it. Concentrate on that matter until it is finished, or until you have gone as far as possible with it. The greatest foe to concentration is distraction, and there is nothing that will distract you quicker than papers on other matters lying under your eye.

So the Desk Organizer will do for you these three things. It will keep your desk clean. It will make a place for everything, and it will help you to promptly finish what you start. Locating the Desk Organizer in the upper left-hand drawer puts it right under your hand, where it is always in reach, and its contents always in sight.

Estimating and Contract Forms

Drawer number 2, which is the middle drawer on the left-hand side, is for your estimating and contract forms. We find that a legal sized folder can be purchased from a stationer having in it twenty-six to thirty-one divisions. This folder is 15 inches long, and 9 1/2 inches wide. It is not quite as long as the estimating forms, but it will keep each set of forms together, and will keep them clean and smooth, and they will be right under your hand when you come to figure a job. In the same folder you will have your contract forms, so that you can go right through, make up all the figures on your estimate, and select the proper form of contract for your stenographer to fill in.

Drawer number 3, we have left open for whatever personal papers you wish to keep in your office.

Drawer number 4, which is the wide drawer in the middle, should hold all your desk tools and supplies. These include pencils, slide rule, scale rule, pen-holders, pens, rubber bands, clips, eraser, etc. A tray with suitable divisions can be bought for these, or small paper boxes can be used, being held in place by thumb tacks thrust through the bottom of the paper box into the drawer bottom. This will give an orderly arrangement. This tray should be placed right in the front on the left-hand side. It will not take the full width of the drawer, and beside it should be your Price Book. Back of these you keep scrap paper and scratch pads.

Continued in Next Issue.

Made in Canada

Pipe Fittings

Dominion Wide Recognition

M Brand Pipe Fittings give a service and satisfaction that will invariably get you re-orders and much new business as well.

A trial of the goods will prove this claim.

Malleable Fittings with this brand mean fittings made of *Air Furnace* Refined Iron, reamed and tapped to gauge with perfect threads.

Cast Iron Fittings with this brand mean fittings made with iron of high tensile strength—proper proportions and correct tappings.

Recessed drainage fittings. Standard and extra heavy flanged fittings and flanges. Galvanizing malleable and gray iron castings of all kinds.

International Malleable Iron Co., Limited
Guelph, Ontario, Canada

This is a "Q" Foot Valve

And it Just CAN'T Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

Extending the Uses of Your Product by Informing Dealers

When the efficient, modern advertiser finds his reputation firmly established, the confidence of the trade firmly held, distribution ideal and his product and trade-mark thoroughly familiar, he directs the full force of his continuous advertising toward increasing the uses of his product by showing the dealer and his salesmen each week new uses for his goods that both stimulate sales and increase the consumer satisfaction with the product.

A message to the whole plumbing trade of Canada through Sanitary Engineer is productive, profitable and reliable "business insurance" for the future.

When writing advertisers please mention that you saw their advertisement in the *SANITARY ENGINEER*

BRANCH OFFICE : 136 SIMCOE ST., TORONTO

A Stirring Instalment of Heming's Famous Story

ARTHUR HEMING continues his remarkable story of Canada's Northland in March 1 MACLEAN'S MAGAZINE. In "Wild Animals and Men" he tells how he and Oo-Koo-hoo tracked and trapped wolverine, lynx, and other wild animals, and tells fascinating stories of battles of wits between the hunters and the hunted. The wiles of the Indians and half-breeds are pitted against the amazing, almost superhuman craftiness of the animals—and sometimes the denizens of the forest wilds outwit their human antagonists.

Fun at Opening of Parliament

J. K. Munro sat in his seat in the Press Gallery, Monday, February 14, when Parliament opened, and looked down with the good-natured tolerance and contempt of an iconoclast and a satirist at the proceedings. The members invariably amuse "J. K."; it takes a really big man to elicit more than scant praise from his sophisticated pen. His March 1 article is entitled: "Funny, as the Owl is Funny."

Other Big Features and Fiction

"Canada's Fur Future," by Agnes C. Laut. Telling what a potential gold mine Canada has in her fur industry, properly conserved and exploited.

"Goldwin Smith," by James Mavor, Ph.D. The personal side of the "Sage of the Grange," the man who was tutor to King Edward VII, before coming to Canada.

"More Political Memoirs," by Col. George H. Ham. Further stories of the "Solons of the Eighties," and Ottawa 30 or 40 years ago.

"Pawned," by Frank L. Packard. The story of a triple regeneration—in this instalment John Bruce declares his love for the "Pawnshop Girl."

"The Man Who Knew Too Much: The Bottomless Well," by Gilbert K. Chesterton. This Near-Eastern well and a revolving bookcase figure in a baffling murder story, handled by England's master of fiction.

"The Lady at the Door," by Barker Shelton. A girl takes a law course, graduates—but that doesn't mean clients. But she gets a partner—and for life.

"The Millionth Chance," by Henry Holt. An adventurous sea story, with a girl skipper and a man who won her respect—and even her love.

Do You Read These Advertisements?

Every advertisement in this magazine is worth reading. It is the product of some concern that is using a modern piece of selling machinery—technical paper advertising—to present most effectively to you the leading features of its line.

These advertisers are making it easier for you to buy intelligently with the least waste of your time and theirs. They realize that a sales force can not replace this service at equal cost. They know that advertising is good business, for the manufacturer who does not advertise cannot save the cost of advertising. Consistent advertisers are progressive merchandisers. They are saving your money and their own; and it pays to do business with them.

Don't miss your opportunities. These advertisements are interesting. Some are distinctly instructive, and a glance through them every month will keep you posted on the latest developments in Sanitary Engineer.

Send for these folders, to-day!

Clip the coupon below and let us send you these two beautiful illustrated folders. They cost you nothing but will give you a world of information—a big help in solving your heater problems.

The folder on the left tells how 25 to 40 gallons of steaming hot water can be automatically maintained in the home, ready for instant delivery at all connected faucets, by a tiny gas flame no bigger than the blaze of a match. No fuss. No muss. No complications. A simple and profitable installation that any plumber can easily understand.

The other folder describes our Marvel Non-Automatic, a combined range boiler and gas water heater that takes the place of the old "sore thumb" or side-arm contraption. The Marvel is the most economical non-automatic gas water heater made and gives absolute satisfaction.

Know these facts. They are important in your business. Clip the coupon now.

THE CLIMATE OF SASKATCHEWAN

IS THE SEVEREST TEST A SEWAGE DISPOSAL
SYSTEM CAN BE PUT TO.

READ THESE LETTERS

PERFECTLY SATISFIED.

COPY. Stalwart, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Gentlemen:

I am perfectly satisfied with your system of sewage disposal.
See no room for improvement; no trouble at all.
Certainly a boon for the farmer, and all.

Yours very truly,
(Signed) W. H. ETTER.

ENTHUSIASM

COPY. Box 45, Imperial, Sask., Nov., 1919.
Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

Re your letter of November 19th, 1919, regarding the Septic Tank to take care of my sewage disposal.

Well, I may say that it has been very satisfactory in every way.

It is two years last August since it was completed, and I have never had any reason to even open the man-holes. So you see it must be working perfectly, and as to freezing, it has not frozen as yet.

As far as I know there are no objectionable features about the system, and I am in every way well satisfied with the system.

There is no system that could work better.

I cover up the filter bed and the pipe between it and the septic tank, also the septic tank, with chaffy straw about 6 or 8 inches deep in the Fall, so the snow and straw keep the frost out.

Perhaps it don't need it, but I like to take no chances.

I remain, yours truly,
(Signed) WM. J. SHAW.

WORKING FINE.

COPY. Kenaston, Sask., Nov. 25th, 1919.
Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

In regard to my septic tank, I can highly recommend it, as it has been working fine ever since I have had the plant put in.

It has never frozen nor has it refused to work.

I must say that the system has given every satisfaction.

Wishing you every success.

I am, yours very truly,
(Signed) HUGO TIETJENS.

HAS NEVER TOUCHED IT SINCE INSTALLING.

COPY. Imperial, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

The system I have has been working satisfactory.

I have had nothing done to it since it was installed, and everything is in perfect order as near as I can see, in fact I have never given the system a thought.

(Signed) O. D. JOHNSON.

-SATISFACTION AND THEN SOME.

COPY. Duval, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

The sewage disposal system is giving good satisfaction.

So far I have had no trouble with it. So far I am well pleased with it.

(Signed) JOHN MCKENZIE.

COULDN'T IMPROVE ON THE ANTHERS SYSTEM.

COPY. Nokomis, Sask., November, 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

I have answered the following questions.
So far I haven't had one particle of trouble.
I haven't anything to suggest.

(Signed) G. H. HUMMEL.

Is the system giving every satisfaction? Yes.

Does the syphon valve work perfectly? Yes, so far.

Have you had any trouble with freezing? None.

Are there any objectionable features about the system? Not any that I have found.

QUITE SURE IT'S ALL RIGHT

COPY. Hawarden, Sask., Nov., 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

In reply to your request, would say that we have found the septic tank very satisfactory, but we didn't lay enough of field tile to take care of seepage, as the sub-soil is very hard, and we were putting a lot of water through the system.

The syphon seems to do the work alright.

We had the main line freeze up coming near Spring, just in one place, about 6 feet of the main line where it runs close to my garage, and there was no snow lodged on that particular place.

I think the trenches should be covered with about 6 inches of horse manure in the Fall, so as to catch the snow, and there should be no danger of frost.

Hoping these few lines will be of some benefit to you.

I remain, yours truly,
(Signed) WEBSTER MOONEY.

PUT IT IN LATE IN THE SEASON, BUT

COPY. Cotton Woods, Nov. 28th, 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

In answer to yours I might just say that so far the Septic Tank system of sewerage is a success.

I have not as yet found any deficiency in either construction or operation.

We have used the system for about six weeks, beginning just one week before freeze-up. It did not even get a fair chance, but as yet it has withstood the frost, being covered to the depth of six inches with clay earth. I spread strawy fresh horse manure over the disposal bed to a depth of one foot, and everything is working well so far.

I would highly recommend this system of sewage disposal to every farmer.

Sincerely yours, W. THOMPSON.

HASN'T FROZEN YET—AND NEVER WILL.

COPY. Abernethy, Sask., Nov. 26th, 1919.
The Anthes Foundry Ltd.,
Winnipeg, Man.

Dear Sirs:

In reply to yours of the 25th inst., I might say that regarding my septic tank installed last June, I have had absolutely no fault to find with either the material used or the workmanship, as it has thus far given perfect satisfaction in every way.

As far as I know, the syphon valve is working perfectly, as it has never given any trouble.

It has never frozen so far, but we have covered the septic tank and disposal field with about 1½ to 2 feet of horse manure, as I wish to give it every possible chance.

I have no fault to find, or suggestions to make to improve this system.

I am, yours truly,
(Signed) WM. FOSTER.

A Country House —and nothing more?

HUNDREDS of people pass this country place every day. They admire it with a glance and drive on.

To you—however—with your knowledge of the plumbing and steam-fitting trade—it has more than a casual interest.

You do not look at merely the outside of a fine house—you think of its heart—its heating system, lighting facilities, drainage, sanitation, all carefully *built in* to fit a skilfully combined plan which gives comfort and service to the owner.

“What strides our business has made in twenty years” you say—and think, not of bricks and timbers, but of steam pipes, water pipes, electrical conduits, drainage pipes—the results of good workmanship in a business you are proud to be in.

If people could be made to think more of the wonderful comforts of modern workmanship like this, you would hear fewer uncomplimentary remarks about the

plumbing business. And as more workmen realize that good work comes from good tools and *knowing how to use them*, the plumbing business will earn the commendation it deserves.

Good tools—we mean the **GTD** kind—do away with the jams, botches, delays that used to kill progress. Today the clean-cut jobs, where there is profit and pride, are done with such tools as the **GTD** Receder—which will quadruple pipe-threading production—or the “*Trio*” Die Stock—which will triple the value of any man’s time. And no *good* workman would think of tackling the big job without them.

To master plumbers—send for circulars describing the **GTD** Receding Pipe Threader—“*Trio*” Die Stock—**GTD** Pipe Wrench—and information about our master tools.

Use the coupon.

The Centre of Home Health

Sanitation, health and comfort demand the bathroom as essential to the perfect home. No longer is it considered a luxury, since the science of manufacture has produced such beautiful fixtures at moderate prices.

The development of the individual water system for rural homes has placed the bathroom within the reach of all farm dwellers. The generation-old dream of comfort and convenience can now be realized—you can have a bathroom as completely equipped as in any city home.

The bathroom is the one room which must give service day and night, and year after year. It is the centre of home health and comfort, and if, in addition to its service value, it is attractive and beautiful, its use is not only a necessity, but a pleasure.

Consult your plumber—he can best advise you about

"JARDINE" and "TOLEDO" Pipe-Threading Tools

Interesting Features

The Jardine and Toledo have no cams or gimcracks to get out of order, and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

The New *Westco* Tankless Water System

It is very often said that nothing is so perfect but that it may be improved.

To some extent this is true—at least we think so—so much so, that we are always investigating to discover means of improving the Westco System.

The general operation of the Westco Tankless System represents absolutely the last word in water pressure systems. Therefore, it is only in the details of construction of the system that we can effect improvements.

If you already sell Westco Systems you should write us for particulars about the improved Westco System.

If you do not sell Westco Systems you should write and find out what you have been losing by not handling this line.

For your information: The Westco Tankless Water System is now fitted with an

All-Bronze Pump and New Westco Two-Pole Pressure Switch

Write us for complete information about this pump, which has only one moving part, and for our Dealer Co-operative Plan.

Jumped From The Frying Pan Into The Fire

By Booster Binx

You are right, we did have a chat together about the frying pan; and you knew exactly what I meant, but some didn't quite get me.

One went so far as to say that I said: "We jumped from the frying pan into the fire."

What I did say, was that a frying pan made us get on the jump, about our direct fire surfaces.

The fire we were talking about, happened to be in our old-style Burnham.

The pan was what the fire surface then was.

Just a flat surface like a pan.

Just naturally, it didn't pan out, economywise, to suit the Big Boss.

So, somebody—to be honest, believe it was a woman—hinted that if that surface, instead of being one big pan, was a lot of small ones stood on edge, so the fire would lick around three sides—what a wonder of a coal-saver it would be.

So that's about what we did. Only we made the pans key-hole shaped.

After which, each section had its own on-edge-pan, extending from side to side. The direct surface was like a flock of pans hovering over the fire.

The wise little woman who suggested it, now persists in saying: "The idea popped out of the frying pan into the fire." Being as how it is not always safe to contradict the women folks, let's let it go at that.

The main thing is, that now you surely know why the Burnham's direct fire surface is made the way it is made.

Likewise, one of the big reasons why it squeezes the very life out of every pound of coal.

So long, I'll see you again in a week or so.

Good Results From Plumbing Display

Displaying Plumbing Goods Will be Emphasized by Canadian Trade Extension Bureau—Some Effective Displays Arranged by T. J. Minnes & Co., Brantford, Ont., as Advocated by Trade Extension Movement

PART of the service of the National Trade Extension Bureau of the United States is to provide plumbing and heating engineers with plans and dimensions for the arrangement of displays. It is felt that trade extension, as applied to the plumbing business, must start with a system of education. In this connection it is thought that one of the most important lessons to be taught is the display of plumbing goods.

Discussing the point at last year's convention of the Ontario Society of Domestic Sanitary and Heating Engineers, it was the opinion expressed by some of the leaders in the movement for the establishment of a Canadian Trade Extension Bureau, that one of the chief reasons why the plumbing trade has not been accorded its proper status in the past has been largely due to the fact that many operators have been content to work out of a dingy cellar or store located in an out-of-the-way place, and these operators have never figured the value of an up-to-date display as a help in selling fixtures.

It is realized by all that the days of

real salesmanship are here, that every possible factor to help in selling is needed today and that much attention must be given the question of displaying plumbing goods in order to increase the demand for them.

Canadian Trade Extension Movement

To this end, and in view of the steps being taken for the formation of a Canadian Trade Extension Bureau, the suggestions for plumbing window and store displays, as shown herewith, will give some idea of the benefits which may be derived from such service. These displays have been arranged by T. J. Minnes & Co., Brantford, Ont. Dealing with the subject, Mr. Minnes stated to Sanitary Engineer:

"The idea of these displays is to create a desire on the part of the public for good plumbing goods. This desire cannot be created by having plumbing fixtures sitting in a haphazard manner about the store, and in far too many instances set up half assembled minus a trap and bibbs or cocks, as the case might be, perhaps a closet outfit set up

without a seat on the bowl. It is not fair to the prospective customer, as it leaves to them the necessity of exerting their imaginative power as to what the finished work in their home would be like, and in most cases their power of imagination does not do justice to the real results the plumber is capable of achieving. Therefore, it also is not fair to the plumber to place himself in this disadvantageous position.

"The same thing is also true of window display; too often one will see a good plate glass front not working for lack of interest and appreciation as to its worth. The plumbing trade as a whole is altogether too lax in setting forth the good front that would raise themselves in the estimation of the public, and are losing a golden opportunity of suggestiveness that would bring them good returns for the time and investment in maintaining display windows and show rooms. It is with this idea in view, which has been taken from lessons in trade extension, that we here produce two photographs of plumbing goods display which

An attractive window display of plumbing goods as arranged by a feminine member of the staff of T. J. Minnes & Co., Brantford. It has just the touch which will make it appeal to women shoppers. The method of dressing this window is described in the article.

Showing how two complete bathroom sets are arranged in the T. J. Minnes & Co. store, Brantford, Ont. The rear set is that of a standard three-piece bathroom complete with shower. Partitions about four feet high help to convey a better impression of how the sets will look when actually installed. Good use is made of the exterior of the partitions for the showing of other plumbing lines.

can be accomplished with comparatively little expense in any plumbing establishment.

Young Lady Dresses Window

"Photo No. 1 is a window display, the credit of which is due to the efforts of a young lady in the office whose taste is evidence of refinement, which any office girl could acquire with a little thought. It is really a very simple thing to dress this window as you will note by the following specification: Take a number of cans and set in window in such a manner to use as supports for some pieces of rough boards built along the lines of a doorstep, face over neatly with blue crepe paper neatly crimped and pinned into position, then use common sense in placing the bathroom fittings in such a manner that it is pleasing to the eye, and do not use too many fittings in the display. Very simple, isn't it? This window has been the subject of much attention by passersby and of many compliments to the designer. Incidentally, it has also been the means of many sales and enquiries. Of course, that is the intention.

"Photo No. 2 is that of two complete bathrooms in detail; the rear one is that of a standard three-piece bathroom with fittings, the front one is also a three-piece bathroom complete with shower, the fixtures and fittings being of a more expensive design and finish. The partitions are about 4 feet high and composed of 1-inch rough pine faced with beaver board in one panel, with 6-inch base

MINIMUM TEMPERATURE IN APARTMENTS IN ONTARIO

An act to amend the Public Health Act has been introduced in the Legislature of the Province of Ontario, which amendment reads as follows:—

1. The owner of every apartment house or other building in which rooms or suites of rooms or apartments are rented who has the control of the heating of such building and rents the same or any part thereof and undertakes to keep the same heated shall keep the portions thereof so rented heated throughout to a temperature of not less than 68° Fahrenheit between the first day of October in each year and the first day of June in the following year and in default he shall be guilty of an offence and shall incur a penalty of not less than \$50 and not more than \$500.

2. The medical officer of health and any sanitary inspector acting under his instructions or those of the local board, may enter any such apartment house at any time for the purpose of seeing that the provisions of this section are complied with.

It is understood that municipalities in the province are given power to enforce this regulation and already the City of Toronto has taken steps along this line.

board and $\frac{3}{4}$ by 2½ inches trim with cap and mold, the beaverboard is finished in gray, while the inside trim is finished in white enamel, and the outside in oak stain. The arrangement of the two bathrooms really is an economy of space in store as there is more wall or partition space on which to set the plumbing fixtures. This arrangement has caused such favorable comment by people visiting the store, that the success of the efforts are already assured. A layout similar to the one herein shown will repay anyone who may venture, not to speak of the satisfaction he surely will feel in seeing the improvement made to his store. This idea of ours may be carried out upon a larger or smaller scale according to the size of the store, and may also be more or less elaborate to suit the owner's taste or amount of expenditure allotted.

"In the United States the Trade Extension Bureau will, upon request and receipt of the dimensions of a store, make a layout free of charge that will suit the requirements of the owner to the best advantage of the store and in Canada the same idea will be carried out by the Canadian Trade Extension Bureau and in fact will co-operate with any plumber who is desirous of bettering his business condition."

The photograph shown here is one-half of a combination plumbing and electrical store, but the idea may be carried out just as successfully in a straight plumbing establishment.

Saskatchewan S. & H. Engineers' Convention

Representative Gathering of Plumbing and Heating Engineers, Plumbing Inspectors and Representatives of Wholesalers and Manufacturers—Many Problems of Plumbing and Heating Engineers Were Discussed

From Special Correspondent to Sanitary Engineer

MOOSE JAW.—Every delegate to the third annual convention of the Saskatchewan Society of Sanitary and Heating Engineers was unanimous in the opinion that the open discussion of many of the problems facing the craft to-day was of great value and the hands of the society have been further strengthened by the gathering. The convention proper lasted three days, delegates coming to this city from all parts of the province. Arrangements were in charge of T. G. Bayliss, George Baird and H. E. Montgomery, and the executive committee outlined some preliminary plans before the opening of the convention, which was held in the Builders' Exchange Rooms.

The convention was given an official send-off by his worship Mayor Smith, who addressed a few words of welcome to the delegates. In his remarks his worship stated that their occupation was closely connected with his own medical profession, in that they were both engaged in protecting the public health. Therefore it was right that they should work hand in hand. He wished them success in the convention and hoped that they would pass resolutions to the best interests of the public health.

President T. J. Alexander in his address congratulated the members upon their showing and emphasized the importance of using every available minute of their time for aiding the deliberations as there was much urgent business to be taken up. A splendid report was presented by the secretary-treasurer of the society, James Adam, Regina.

Apprenticeship Problem

At the afternoon session the election

of officers was held with results as outlined elsewhere in this report, following which addresses were delivered by Scott Robertson, Regina, the newly elected vice-president, on "The Apprenticeship Question" and by President C. A. Green on "Association Work."

In his address on the apprenticeship subject Mr. Robertson pointed out a few of the main reasons why it was so difficult to secure apprentices for the plumbing trade. He was of the opinion that the work would have to be made more attractive for the young men. For this purpose technical training should, he thought, be introduced as well as practical training. Most of the young men who left school to enter a profession were not satisfied to start in the plumbing trade as an apprentice when much better pay could be obtained elsewhere. Therefore, he stated, it was up to the convention to get together on the question and make the trade more attractive and inducing to young men about to enter the business world.

Inter-provincial Associations

Mr. Green's address was of a general nature, emphasizing the importance of getting together and suggesting the formation of inter-provincial associations for the purpose of standardizing the work of the men and the materials used. At this session addresses were given by James Smith, Winnipeg inspector of plumbing, and by R. H. Murray, Regina director of sanitation, Provincial Bureau of Public Health. These addresses are given in full elsewhere in this issue.

At the conclusion of his address on the respective merits of wrought iron, steel and cast iron pipe, Mr. Smith pro-

duced pictures and examples of corrosion of pipes which he had collected during his work.

A suggestion for standardization of pipe fittings was referred to the executive committee for further discussion.

Visit Disposal Plant

At the Thursday afternoon session a trip was paid to the local sewage disposal plant by the delegates and wholesalers, followed by a session of the convention open to the wholesalers at which a number of interesting subjects were discussed. This was followed by an address by W. H. Meyhew, Moose Jaw, Government boiler inspector, on the subject, Low Pressure Boilers, and an address by Dr. Bayley, medical health officer, Moose Jaw. George Baird, of Moose Jaw, spoke on "Business Methods," after which the session adjourned for the afternoon.

The Banquet

A fitting climax to the splendid convention was the banquet tendered by the local members to the delegates at the Empress Hotel on Thursday evening. Every provision was made for the entertainment of the visitors, the entertainment committee consisting of George Baird, Tom P. Bayliss and H. E. Montgomery. Retiring President T. J. Alexander made a genial toastmaster.

His Worship Mayor Smith, Commissioner Mackie and Dr. Bayley, M.H.O., were on hand representing the city, R. Farquharson represented the Board of Trade. There were also in attendance many salesmen representing manufacturers and supply firms.

After the appetites had been fully

DELEGATES TO SASKATCHEWAN PLUMBERS' CONVENTION

A group taken in front of the premises of the Moose Jaw Heating and Plumbing Co., Moose Jaw, Sask., of the delegates to the annual convention of the Saskatchewan Association of Plumbing and Heating Engineers.

satisfied Ald. T. J. Alexander took up his duties. A toast to "The King" was proposed by his worship Mayor Smith, followed by one to the Provincial Association proposed by N. B. Roantree, the "Daddy" of the association, and responded to by C. A. Green, Saskatoon, the new president. In their remarks Mr. Roantree and Mr. Green touched upon the growth of the society since its inception in Regina three years ago.

Other toasts during the evening were "The City of Moose Jaw," proposed by Neil Beaton, Saskatoon, responded to by Commissioner Mackie. A toast to "Manufacturers and Jobbers," proposed by Vice-President Scott Robinson, Regina, and responded to by J. Stevens, of the John Stevens Company, Winnipeg. Toast, "Our Guests," proposed by H. E. Montgomery and responded to by James Smith, Winnipeg.

These toasts were interspersed with songs by G. C. Hawley, Geo. Baird, R. B. Stewart and Tom P. Baylis, a monologue by James Drynan and a reading by A.

Frost. Lively sing-songs by the whole gathering were conducted by Geo. Baird.

Those in Attendance

Among the members present were the following:

Regina Plumbing & Heating Co., Regina; Vagg, Wilson Co., Regina; Franz Franks, Regina; Potts & Smith, Regina; Whitford Bros., Regina; Frost Bros., Regina; Roantree & Co., Regina; Jas. Adam, Regina; Empire Plumbing Co., Regina; Pitts Bros., Regina; Frost Bros., Moose Jaw; H. E. Montgomery, Moose Jaw; Moose Jaw Heating & Plumbing Co., Moose Jaw; Alexander & Baird, Moose Jaw; T. P. Baylis, Moose Jaw; Northern Plumbing Co., Saskatoon; Beaton & Brady, Saskatoon; H. D. Wheeler, Saskatoon; Cornish & Co., Saskatoon; Chas. D. Kirk Co., Saskatoon; P. J. O'Neil & Co., Swift Current; Geo. Walker, Weyburn; J. C. Stewart, Weyburn; A. I. Kracenski, Melfort; W. L. Powers, Rosetown; J. E. Yates & Co., Brandon, Man.; Cooper & Scarrow, Yellow Grass; Alex. Rankin, Keppel; A. L.

McKay, Semans; Sanitary Plumbing & Heating Co., Yorkton.

Visitors

Among the visitors were the following:

Jas. Smith, chief plumbing inspector, Winnipeg; J. A. Bertwhistle, chief plumbing inspector, Regina; H. D. Mathias, plumbing inspector, Regina; G. G. Taylor, chief plumbing inspector, Saskatoon; C. Jones, chief plumbing inspector, Moose Jaw; R. H. Murray, director of sanitation, Provincial Bureau of Health; Thos. Watson, chief inspector, Provincial Bureau of Health; Thos. A. Reid, inspector, Provincial Bureau of Health.

Wholesale firms and manufacturers represented were:

Toronto Hardware Co., Anthes Foundry Co., Dominion Radiator Co., John Stevens Co., J. Robertson Co., Wolverine Co., Ltd., J. H. Ashdown Co., Pease Western Foundry, Engineers & Plumbers' Supply Co., Canada Metal Co., Gurney Foundry Co., Cronkhite Co., Ltd., Wood, Vallance Co.

Merits of Cast, Wrought Iron and Steel Pipe

Details of How These Three Kinds of Pipe Stand Up Under Use For Drainage Purposes—Theories of Corrosion—Advantages and Disadvantages of Screwed Pipe

Address by James Smith, Chief of Plumbing Inspectors, Winnipeg, before Convention of Saskatchewan Sanitary and Heating Engineers

IN introducing this subject it is well perhaps to state that the base metal of cast iron, wrought iron and steel is pig iron, the different names being applied to these metals as a result of the particular processes through which they pass in their manufacture.

Cast iron is the only one of the three metals which does not undergo any change in its characteristics in the process of manufacture, but is merely converted into a molten state to permit of its being moulded into the different shapes required for the many purposes in which cast iron is used.

Wrought iron has, however, to undergo a refining process called "puddling" to render it comparatively free from carbon, silicon, sulphur, phosphorus and manganese, before it can be manipulated into thinly rolled sheets for the purpose of making wrought iron pipe, etc.

Steel—The difference between wrought iron and steel is that in the manufacture of steel pipe a certain amount of ferromanganese is added to the molten metal in the Bessemer converter to make it possible to roll and weld the over-oxidized metal.

The merits of these three metals for drainage purposes rest primarily on their ability to resist corrosion.

Theories of Corrosion

It is not my intention to weary you with a description of the different theories of corrosion, suffice it to say

that there are at least three well defined theories, viz., hydrogen peroxide, carbonic acid, and electrolytic. But we can leave this side of the question to the chemist and analyst. On one common point they are mutually agreed, and that is that the iron particles must be in direct contact with oxygen and moisture before rusting can take place.

My intention is rather to treat the subject from a practical point of view, giving you a résumé of the investigations made in recent years, as well as my personal experience, and the deductions I have arrived at in a study of the question during the last five or six years.

Dr. Gerhard's Investigation

In 1918 Dr. William Paul Gerhard, C.E., made an investigation of the condition of the piping in 78 buildings in a prescribed area in New York, and while he proved conclusively that steel pipe was unsuitable for drainage purposes, due to it being subject to corrosion much more readily than wrought or cast iron pipe, he says: "Extra heavy cast iron pipe, on the other hand, was found in a number of buildings, and in nearly all cases the cast iron vents were found to be evenly pitted on the inside, similar to wrought iron vents, and still good for many years' service," and further on he states: "In one or two instances cast iron vent pipes were found to be as good as new, though they were the original pipes put in when the building was erected, in

one case 36 years ago; in another case, 35 years ago; in another, 29 years ago."

Truly, an excellent testimonial for cast iron pipe.

Dr. Gerhard also found several systems of plumbing in which both wrought iron pipe and steel pipe had been used, and discussing the indiscriminate use of wrought iron and steel pipe, he says: "The mixed steel and wrought iron installations not only afforded an excellent comparison of the life of wrought iron and steel pipe under equal conditions of service, but also emphasized the widespread substitution of the cheaper steel pipe where wrought iron pipe is specified. The presence of steel pipe in buildings supposed to be piped with wrought iron may possibly account for the erroneous belief on the part of some engineers and architects that there is practically very little, if any, difference in the corrosion of iron and steel pipe and hence in their respective duration of life."

"The fact should also be mentioned that many architects' and engineers' specifications do not attempt to make a distinction between genuine wrought iron and steel pipe."

Kindly note these facts, that wrought iron and steel pipe are used in the same installation, apparently because the average man, be he a plumber or an architect, is unable to distinguish the difference, also that architects' specifications do not make any distinction between

NEWLY-ELECTED OFFICERS AND EXECUTIVE OF SASKATCHEWAN SANITARY AND HEATING ENGINEERS' ASSOCIATION

Back row, from left to right (members of executive committee)—G. E. Yates, Brandon, Man.; A. L. McKay, Semans, Sask.; N. B. Roantree, Regina, Sask.; N. Beaton, Saskatoon, Sask.; T. G. Alexander, Moose Jaw, Sask. Front row, left to right, are Vice-president J. Scott Robertson, Regina; President C. A. Green, Saskatoon; Secretary-treasurer J. Adam, Regina.

wrought iron and steel pipe, as I shall refer to those matters later.

Summary and Recommendations

We will now deal with Dr. Gerhard's summary and recommendations, and in order to be quite fair I will quote the full text of his summary.

"(a) Cast iron extra heavy soil pipe, while satisfactory as a material from the corrosion point of view, is objectionable because of the caulked joints, which cannot be depended upon to remain tight under all conditions of use."

The only objection apparently that can be taken to cast iron pipe installations is on account of the caulked joints not remaining tight under all conditions. It is worth noting that of the 78 buildings examined by Dr. Gerhard 24 of them or 30 per cent. of the whole were piped with cast iron stacks, and I cannot see an instance where he found a defective or leaking joint on any of these stacks. The only defective caulked joints found were on drains, and to quote his own words, was "particularly noticeable whenever large quantities of hot waste water, as from dish washing in restaurants, pass through the pipes, and also where steam exhaust or drip pipes, or boiler blow-offs are tapped into the house sewer."

My contention is that these pipes were installed as drains, not as steam exhausts or blow-offs, and there is ample provision in all by-laws to prevent such an occurrence.

"(b) The screw joint is far superior to the caulked joint. Care should be taken to cut the threads, and to have drainage fittings so tapped that the pipe can be screwed well into the shoulders of the

fitting. Any portion of the thread remaining exposed can readily be protected against external corrosion by careful painting. Any fears that may have been felt as to the strength of the weld and the rust resistance of the pipe thread have not been confirmed, for such failures as were observed were due in general to extensive corrosion rather than to weld failure or localized corrosion at threads."

I cannot agree with any of the statements made in the above paragraph. It may be that when new a screw joint will resist a greater tensile strain than a caulked joint, but my own experience is that a screw jointed pipe gives way first at the joint and this is only to be expected, as 50 per cent. approximately of the body of the metal is destroyed when

threading the pipe, and I will demonstrate by photographs that the rust resistance of the pipe thread is no myth and is an important factor in the life of a screwed pipe. (See photo No. 1.)

"(c) It must be conceded, after the evidence furnished by this investigation that genuine wrought iron pipe is a far more durable material for house drainage purpose than steel pipe."

We all, I think, agree on this point.

T. J. Claffy's Investigation

Let us turn now to the investigation made along similar lines by T. J. Claffy, Asst. Chief Sanitary Inspector of Chicago, in the same year (1918).

There were 63 buildings examined in a particular section of Chicago and in 25 of them or practically 40 per cent., the plumbing systems were constructed of cast iron piping either in whole or in part.

In the installation from 10 to 19 years old Mr. Claffy estimates the depreciation of steel pipe at 75 per cent.; wrought iron and cast iron, 10 per cent.; in the installations over 20 years old he estimates that steel pipe depreciated 90 per cent.; wrought iron 20 per cent., and cast iron 25 per cent. There are several factors to be taken into consideration in viewing these estimated figures, particularly as he places cast iron on a lower grade than wrought iron in buildings over 20 years old. Mr. Claffy himself states that "the poor rating for cast iron in comparison with wrought iron as shown in this table is to some extent due to probable higher average age of cast iron installations," and again we must remember that in a number of the illus-

OFFICERS FOR ENSUING YEAR

The following officers were elected for 1921 by the Saskatchewan Society of Sanitary and Heating Engineers:—

President: C. A. Green, Saskatoon, Sask.

Vice-President: Scott Robertson, Regina, Sask.

Secretary - Treasurer: James Adam, Regina.

Executive Committee: N. B. Roantree, Regina; Neil Beaton, Saskatoon; T. J. Alexander, Moose Jaw; J. E. Yates, Brandon, Man.; A. L. McKay, Semans, Sask.

trations showing defective cast iron pipes these pipes are of standard weight (a light class of pipe which has never been used in this country), whereas he shows illustrations of some extra heavy cast iron pipe "installed 30 years ago and still practically as good as new."

The reports of Dr. Gerhard and Mr. Claffy are probably the most valuable practical contributions made on this subject in recent years, and viewed from all angles bear high testimony to the desirability of using cast iron piping of good quality and weight in drainage systems. Both investigators have rendered a valuable service to the plumbing trade in bringing to our attention in a practical manner the very short life of steel pipe and therefore the necessity for eliminating it from this class of work. No pipe with a life of usefulness of from 10 to 15 years should be permitted to be used in a plumbing system.

My own opportunities for research along this line have been more limited in scope due to the relatively youthful age of the city I represent (Winnipeg), but we have some striking illustrations of the undesirability of using what is commercially known as "wrought" pipe. I submit herewith samples of both black and galvanized pipe, the former taken from the Royal Alexandra Hotel during the reconstruction of the piping system. There were 68 stacks in the building, including soil, waste, vent and rain water stacks, and all of them had to be removed, as they were found to be extensively corroded. The cost of reconstruction was \$65,000. It is only just to state that this was a steel pipe system, installed in 1904 and reconstructed in 1918, so that the age of the system was fourteen years. The underground drains in this building were constructed of cast iron piping and we had ample opportunity of examining them during the course of alterations, but could find no evidence of corrosion such as existed in the stacks. They were as good as the day they were put in.

The galvanized pipe was taken from the Paulin Chambers' factory and discovered when making alterations in 1920, the date of installation being 1911. This also is, I believe, a steel pipe, although I have not had it tested.

Having gone over the ground investigated, as thoroughly as time will permit on this occasion, let us analyze briefly the advantages and disadvantages of the screwed pipe system eliminating consideration of the steel pipe altogether, as there is no doubt in my mind that it is highly undesirable to use steel pipe in drainage work.

Advantages of Screwed Pipe

The only claim made so far in favor of the screwed pipe by its adherents is that it is stronger and more rigid. Even granting that the screwed pipe system is stronger and more rigid when new,

there are many disadvantages which far outweigh the advantages.

Disadvantages of Screwed Pipe

The threaded portion of the pipe reduces the thickness and strength by 50 per cent., and if the pipe is galvanized the exposed threads are more readily subject to corrosion.

The greatest disadvantage in using the screwed pipe is that pipe commercially known as "wrought" pipe includes steel pipe and it is only with great difficulty that genuine wrought iron can be distinguished from steel pipe. I don't believe that the ordinary mechanic or inspector has enough metallurgical experience or training to determine whether or not screw pipe after it is erected is steel or genuine wrought iron.

F. N. Speller, metallurgical engineer of the National Tube Co., Pittsburg,

N. B. ROANTREE

Regina, former president of the Saskatchewan Society of Sanitary and Heating Engineers, who was elected a member of the executive committee for 1921.

states: "Up to 27 years ago hand puddled iron was used exclusively. But since the introduction of steel as the basic material for pipe there are almost as many grades as there are manufacturers, and there is more difference between the various grades of wrought iron and the different makes of steel than there is between iron and steel as a class. The man who is most ready with his opinion of the life of iron and steel cannot distinguish wrought iron from steel."

The A. M. Byers Co., of Pittsburg, prescribe certain tests for differentiating between genuine wrought iron and steel pipe, but they admit that "an uncertainty might arise when applied to a mongrel material," and when they speak of a mongrel material they refer to a "material usually sold as wrought iron, but made largely by busheling steel scrap

and with wrought iron usually forming the minor portion."

After opinions from such authorities as I have quoted showing the extreme difficulty in distinguishing between genuine wrought iron pipe, steel pipe, and this mongrel pipe, I ask you in all sincerity what chance has a mechanic or an inspector to fix their identity?

Even the relative rate of corrosion of wrought iron and steel pipe is assailed by eminent authorities.

Prof. Ira H. Woolson, formerly of Columbia University, arrived at the following conclusion after an investigation: "In my judgment, from the evidence collected there was absolutely no difference in the corrosion of the two classes of pipe, that is, iron and steel."

In a paper by Wm. H. Walker, Ph.D., in 1911, before the New England Waterworks Association, he says that "taken on the average there is no difference in the corrosion of wrought iron and steel."

Advantages of Cast Iron Pipe

The advantages of cast iron pipe on the other hand are overwhelming.

1. Withstands corrosion better than any other pipe.
2. Easy to handle.
3. Requires no special tools or equipment to handle.
4. Mistakes in measurements are not so costly.
5. More convenient to make replacements, alterations or repairs.
6. It costs less to install.
7. You know definitely what you are installing, whereas with screw pipe there is considerable doubt.

In a report of a sub-committee to a convention of the American Society of Sanitary Engineering in 1916 we find it stated: "While the service of wrought iron and steel pipe for drainage is counted in months, the service of cast iron is counted in years." The oldest installation of cast iron house drainage work that I can find any record of in this country was installed in New York in 1833 and is still in operation, while in Europe there are many cases dating back as far as 1685. It has been estimated that under normal conditions cast iron pipe will lose by corrosion one per cent. in ten years, which would make its useful life 1,000 years. In concluding their report they say: "The problem of corroded house drainage is a most serious one, as it entails danger and enormous expense, trouble and nuisance. The life of drainage pipe should in all cases be longer than the expected life of modern buildings, which as an average for all types of buildings ranges between 100 and 200 years."

"Our experience with cast iron pipe has not been sufficiently long to establish just what its life is when used for vents and sewage lines, but it would appear from the evidence presented in this report that the life of well-made cast iron soil pipe and fittings is longer than

Sewage Disposal for Rural Homes

As Specially Applicable to Western Conditions—Investigation of Sewage Disposal on Seventy-Two Farms—Function of the Septic Tank

Address by R. H. Murray, C.E., Engineer and Director Division of Sanitation of Province of Saskatchewan before Saskatchewan S. & H. E. Convention

A FEATURE in the development of rural Saskatchewan during recent years has been the construction throughout the province of modern farm homes.

These residences are in almost every case equipped with electric light and power and all the labor saving devices and conveniences which were at one time thought to be available only for the urban population. There has, however, been a tendency to postpone the installation of modern plumbing fixtures pending more definite and reliable information on the type of sewage disposal system best suited to the local conditions.

Experience has shown that a system of sewage disposal which could be left to run itself on a farm in the Eastern provinces will not prove so accommodating if installed in Saskatchewan where the subsoil is for the greater part a stiff non-absorbent clay, where creeks and watercourses are almost unknown and where the frost can be relied upon to penetrate six feet into the ground each winter.

In the "Plumbing Regulations" issued under the Public Health Act reference is made to the construction of sewage disposal systems for isolated buildings.

It is with a view to supplementing these regulations and to meeting the repeated requests for information concerning the principles, construction and operation of a sewage disposal plant for a rural home on the prairie that this report has been prepared.

In order that the information which follows may be a true statement of experience in constructing and operating sewage disposal plants in Saskatchewan, an investigation has been made by officials of the Bureau of Public Health during the past year of the systems of sewage disposal in actual use at 72 farms in different parts of the province.

The conclusions arrived at as a result of this investigation are embodied in the following pages and in the revised plumbing regulations. Such provisions of the latter as concern the disposal of sewage are appended to this report.

Methods of Disposal

Sewage from a farm house, that is the waste water from water closets, baths, sinks and wash tubs, may be disposed of in one of three ways:

1. By discharge into a watercourse.
2. By discharge into the subsoil.
3. By discharge on the ground surface.

Each of these methods of disposal requires some form of preliminary treatment to remove a proportion of the solids, otherwise a serious nuisance will be created.

Cesspools

The cesspool is an attempt to combine treatment and disposal of the sewage and it accomplishes neither. A cesspool, as one usually finds it, consists of a covered hole in the ground, the sides being cribbed with wood or lined with concrete or brick but with nothing but earth for a

T. J. ALEXANDER

Moose Jaw, retiring president of the Saskatchewan Society of Sanitary and Heating Engineers, who was elected a member of the executive committee for 1921.

bottom, the purpose being to allow the liquids to soak away into the ground.

The solids in the sewage settle to the bottom of the cesspool and choke any porous soil that may be available for absorption and the cesspool quickly becomes stagnant and offensive. The construction of cesspools as above described is no longer authorized by the regulations issued under the Public Health Act.

Septic Tanks

The septic tank is the simplest and the most practical form of treatment to reduce the suspended matter and to render the sewage capable of final disposal with the minimum of nuisance.

What the Septic Tank Does

The function of the septic tank is to assist and to expedite the natural processes of decomposition and putrefaction.

Two simple changes take place in such a tank.

The first is the settlement of the solids to the bottom, the grease and lighter particles floating to the top.

The second is the rotting of the settled solids.

This is brought about by the action of a certain type of bacteria which multiply in the solids and in the scum which forms on the surface of the tank.

These bacteria thrive without oxygen and break up the solids into liquids and gases. The above is all the septic tank does or claims to do.

The statement has often been made that sewage after passing through a septic tank has undergone "a ninety per cent. purification" and responsible citizens have averred that the effluent from a septic tank should be fit to drink.

Let these illusions be once and for all dispelled.

The effluent from a septic tank is just as dangerous to health as the raw sewage which is discharged from the house.

A septic tank removes the greater part of the solids from the sewage but it does not necessarily remove or destroy any disease organisms which may be present in the sewage as it enters the tank.

Nor is the effluent free from offence. If allowed to pond on the surface of the ground it will create a nuisance.

A septic tank will not continue to operate indefinitely without attention.

Although the purpose of the tank is to liquefy the solids, a certain amount of solid matter and residue will accumulate in the tank and will require removal once or twice yearly.

The excavation necessary for the tank may be greatly reduced if advantage is taken of any fall which there may be in the ground surface.

The soil pipe should be led from the house at the point nearest to the site of the tank.

Too frequently the plumbing is completed without any consideration being given to the location of the tank and disposal area, resulting in the latter being sited to suit the soil pipe.

In view of the low temperatures of our winter it is necessary to consider every means by which the contents of the tank may be protected against frost, and for this reason it is best to construct the septic tank as close to the house as possible.

(This does not apply to sewage pump wells which are emptied at regular intervals. The location of these will be discussed later.)

The basement or foundation wall of the house must under no circumstances be used as a wall of the tank, but the tank wall, if it has a minimum thickness of 9 inches of concrete may be built against the basement wall.

In such cases every precaution must be

taken to make the tank absolutely watertight.

The inside of the tank should be finished with a coating of cement mortar in the proportion of 1 of cement to 1 of sand.

The tank should not be situated under a window or near to a door.

Construction of Septic Tank

The dimensions of the septic tank should be 4 feet 6 inches in length by 3 feet in breadth by 4 feet in depth.

This size of tank should be used in all installations for 12 persons or under.

For larger installations the capacity of the tank should be equal to 24 hours flow of sewage estimating the latter at 30 gallons per head per day.

The depth of the tank below water level should never be less than 4 feet.

The length of the tank should be in the direction of flow and should be about one and one-half times the width to give uniform flow through the tank and to ensure that the outlet is reasonably distant from the agitation caused at the inlet.

The inlet to the tank should be baffled by discharging the sewage through a T pipe which should extend 15 inches below the water line.

The effluent from the tank should be drawn off at a similar depth below the surface, through a T pipe to prevent the discharge of any scum.

The gases which are formed by the bacterial action in the tank escape through the inlet T piece along the inlet pipe and through the soil pipe to the roof of the house.

An airtight cover must be provided for the tank. This should be a concrete slab with cast iron manhole cover and frame of sufficient size to permit of the tank being inspected and cleaned out.

Wrought iron steps let into the walls of the tank should be placed immediately below the manhole.

Final Disposal of the Effluent

Three methods of disposal have been referred to and these will be discussed separately.

Discharge of the Effluent into a Water-course

The surface water supplies of Saskatchewan are very limited and they are all liable to be used as sources of domestic water supply.

It is contrary to the provisions of the Public Health Act to discharge any liquid wastes, including the effluent from a septic tank, into a stream, river or lake unless a certificate has been issued by the Commissioner of Public Health stating that the effluent in question may be discharged without injury or danger to the public health.

Such a certificate would, generally speaking, be granted subject to the construction of filter beds or some form of secondary treatment which would render the effluent free from offence.

Any person contemplating sewage disposal by this method should communicate with the Bureau of Public Health, when

a special investigation will be made of the circumstances.

Discharge of Effluent into the Subsoil

This method is the most common form of disposal of a septic tank effluent. It is applicable only to a limited quantity of liquid, such as that represented by the flow from a residence of average size.

Its success depends almost entirely on the porosity of the ground.

The subsoil throughout the greater part of this province is a non-absorbent clay, and the general adoption of this method of disposal in Saskatchewan must therefore be attended by difficulties.

The discharge of sewage or of a septic tank effluent into the subsoil within the limits of any city, town or village in Saskatchewan is contrary to the provisions of regulations issued under the Public Health Act.

The effluent from the septic tank overflows into a "dosing" or syphon chamber which gradually fills to a certain level and discharges its contents at intervals by means of an automatic syphon into a series of open-jointed field tiles laid under the surface of the ground.

The liquid is thus gradually absorbed by the subsoil or soaks through to the underlying strata.

It must be obvious that if the ground is not porous, that is, if there are no indications of sand or gravel, or if it is already waterlogged, this means of disposal cannot be adopted with success.

It has frequently been asserted that a clay subsoil may be made to absorb a septic tank effluent by placing the tile pipes in a bed of broken stone or other coarse material.

Statements like this are entirely misleading.

If the ground is sandy and will absorb a certain amount of liquid, its ability to absorb the effluent may certainly be increased by surrounding the tile pipes with broken stone or gravel. But if a 6 inches diameter hole drilled in a bed of clay were filled with water and it was found that the water did not soak away it would be futile to enlarge the hole to 18 inches diameter and to line it with stones as a means of making the water soak into the ground. The effect would simply be to increase the capacity of the hole for holding water.

Similarly the construction of an artificial absorption bed in a clay subsoil is equivalent to providing a reservoir to hold the sewage and it will only be a matter of time until the trenches become waterlogged and the sewage backs up into the septic tank.

In other parts of the Dominion where nature has been more generous with her watersheds, the system of sub-surface distribution is used extensively in conjunction with a surface outlet for the effluent.

In such cases the field tiles are underdrained and the subsoil is used as a filter instead of as an absorption bed. The septic tank effluent after filtering through a few feet of sand or gravel is collected by under drains, the action of the bacteria which are present in the

sub-surface layers of soil oxidizes the sewage before discharge and an inoffensive effluent is discharged into a water-course or on the ground surface.

Unfortunately, this method is applicable only in a few exceptional cases in this province.

The treatment and the disposal of a septic tank effluent are two distinct and separate problems which must not be confused.

The treatment effected by the action of the nitrifying bacteria in the soil does not solve the problem of disposing of several hundred gallons of liquid daily.

This is the real difficulty which presents itself on the prairies—the disposal of the treated effluent—and in the absence of a porous subsoil it is only throwing away time and money to construct an absorption field.

Design of Dosing Chamber

If the ground is suitable for an absorption field a dosing of syphon chamber should be built to discharge the effluent on the bed intermittently.

The dosing chamber should be constructed along with and should form a second chamber to the septic tank.

The capacity of the dosing chamber should be such as to cause the field to be flushed about three times in the twenty-four hours.

Taking the daily flow at 180 gallons this would mean a flushing capacity in the dosing chamber of 60 gallons or 10 cubic feet or a chamber 3 feet by 3 feet by 17 inches deep.

A dosing chamber of these dimensions will be suitable for systems constructed for 122 persons or under.

The action of the automatic syphon which doses the sewage on to the field is as follows:

The U trap is filled with water and as the sewage flows into the dosing chamber air is entrapped in the bell which covers the long leg of the U.

The sewage is prevented from discharging by the weight of the liquid in the short leg of the syphon. When the surface of the sewage has risen high enough in the dosing chamber the resulting head on the bell end of the syphon overcomes the pressure of the column in the short leg and part of the sewage in the latter is forced out.

This starts the full flow through the syphon which continues until the sewage in the dosing chamber falls to the under side of the bell when air is again admitted, the pressures are equalized and the flow ceases.

An overflow pipe from the dosing chamber is necessary in case the syphon should fail at any time. This overflow also acts as a vent pipe to provide air for the syphon. Vent pipes should also be left in the wall which divides the septic tank from the dosing chamber, if this wall is carried up to the roof of the tank. A manhole similar to that specified for the septic tank is required in the cover of the dosing chamber and wrought iron steps are provided to facilitate inspection.

(Continued on page 24)

PATTERNS FOR STILL

By O. W. Kothe, Principal St. Louis Technical Institute an Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri.

NOW and then sheet metal men are required to make a still for one purpose or another. These stills can be made in numerous designs, one of which is shown in the drawing herewith. Observe the body of still is merely a cylinder with a flaring top. This has a collar attached to it.

Now the water chamber and condensing chamber form one body, only the condensing chamber is an inbuilt compartment.

The neck stands up a bit as a shoulder to retain the condensed water.

The water container helps chill the vapor and cools on the walls of the condensing chamber.

Vapor that condenses passes off in the half-inch pipe.

Observe the collar of body and stem and neck of water container must fit snug.

Stills are generally made of very heavy charcoal plated tin or copper as the condensed water seems to rust the light tin very quickly.

Patterns as required are very simple and really need no comment, in view of the multitude of similar fittings we have taken up from time to time.

There's Truth in t Reward

This slogan, adopted and spread by a great newspaper that sets an example by practising what it preaches, is full of truth, because it is based on a true estimate of present conditions.

1921 will reward the man who puts earnest effort into his pursuit of business. Someone has written, "There's no hard times coming—it's just the soft times going."

All these comments are merely ways of saying that 1921 business will fall to the men who go after it the hardest. The period has passed when business will seek the man.

Slogan—"1921 Will Fighters"

We think that 1921 will generously reward the man who makes his show rooms extra attractive, who puts his plumbing enamelware on display in ways that attract favorable attention from possible prospects. The man with the merchandising ability to do this will know how to arouse interest and the desire of possession in the prospect. Such men will correctly advise the customer and efficiently serve him, so that he will be pleased with his installation and eager to recommend it to others.

Such men, we believe, will be rewarded in 1921 with many satisfactory and profitable sales and installations of plumbing enamelware. We wish them every success—they deserve it.

RURAL SEWAGE DISPOSAL

Continued from page 20

Construction of Absorption Field

If the effluent were to be discharged into the subsoil directly it left the tank, the ground surrounding the house would be fouled.

A fire-clay pipe with tight joints should therefore be laid with a fall of 1 in 100 from the dosing chamber to a point at least 50 feet from the house where a distribution chamber or manhole should be constructed.

From this manhole the effluent is run through open-jointed tiles and absorbed by the ground.

As a general rule 50 feet of field tile should be provided for each person in the house or 300 feet for a household of six.

In subsoils of sand or gravel the amount of tile per person may be reduced to 40 or even 30 lineal feet.

The lines of tile should be laid 4 feet apart with a fall of about 3 inches in 100 feet.

The field may be conveniently excavated by means of a team and scraper.

Open tile drains should be laid on and surrounded by a 9 in. bed of broken stone, brick bats, gravel or other coarse material to facilitate the absorption process and to prevent the entrance of sand or earth at the open joints of the pipes. If gravel is available locally the whole excavation may be covered to advantage with a nine-inch layer before the field tiles are placed in position.

Care must be taken in backfilling the excavation, in order that the pipes and their surrounding bed be not disturbed.

Trees or bushes should not be grown over the absorption beds as the roots may penetrate the openings between the tiles and obstruct the flow of sewage.

Depth of Tank and Absorption Field Below Ground

The clause in the provincial plumbing regulations which has hitherto required all basements to be drained will be amended immediately following the issue of this report, and drainage of basements will in future be optional.

Any additional expense incurred by draining the basement is justified, however, by the sanitary advantages obtained and it is recommended that basement drainage be provided in all cases.

Where there is a good surface fall available the field tiles may, subject to the conditions noted below, be laid at the depth at which full advantage may be taken of the action of the soil bacteria, namely 18 to 20 inches below the surface.

Rolling ground is, however, the exception rather than the rule in this province and in the average installation it will be found that the field tiles must of necessity be laid at least three or four feet below ground level.

The regulations which have hitherto governed the installation of septic tanks in this province require all absorption systems to be constructed at a depth which will prevent them freezing, or seven feet below the ground surface.

While the deep system is the only one which this bureau can guarantee against failure during the winter months, investigation has shown that septic tanks and absorption fields may be operated at shallow depths if the following requirements are rigidly observed and the regulations will be amended accordingly.

(1) The absorption field, whether shallow or deep must be constructed in ground which will absorb water. The more absorbent the soil, the less danger there is of the field freezing.

(2) The septic tank must not be built above ground level. This has been done in some instances, in an effort to provide a shallow absorption field and the practice has invariably been accompanied by the freezing of the liquid in the tank.

(3) The septic tank and all pipe lines, manholes and field tiles must be covered

with a layer of straw at least 12 inches in thickness during the winter months.

(4) The tank and absorption field must be kept in continuous use throughout the winter. If the house is left vacant for a few days the system will freeze and be rendered useless until the frost goes out of the ground.

Discharge of Effluent on the Ground Surface

Where the ground is incapable of absorbing liquid, the only practicable system of disposal is to pump the effluent from the septic tank and remove it to some distant point, where it may be discharged on the ground without giving offence.

This is the only system permissible for the disposal of sewage from houses situated within the limits of cities, towns or villages, and which are not connected with a sewerage system.

Sewage Pump Well

The effluent from the septic tank should flow into a pump well which is designed to hold at least one week's flow of sewage.

In a household of six the minimum capacity of the pump well would be 180 x 7, or 1260 gallons, or a tank 6 ft. by 6 ft. by 6 ft. deep.

The liquid may be pumped from the tank by hand or by power as desired.

In towns and villages the council should provide a tank-wagon and undertake the regular emptying of all tank effluents.

In rural districts the effluent should be discharged on the ground at a point as far removed from the house as practicable and in no case nearer to the house than 100 feet.

During the winter months this distance should be considerably increased for the frozen effluent will accumulate on the ground and cause a serious nuisance when the frost goes.

A planting of trees or bush with good surface drainage makes a suitable area on which to discharge the effluent.

Location of Sewage Pump Well

The sewage pump well and septic tank should be situated at least 50 feet from the house.

The drain from the house to the tank should be four-inch vitrified pipe with cement mortar joints laid carefully at a grade of 1 in 50 or a fall of approximately one-quarter of an inch to the foot.

Vegetable Gardens

The question has often been asked "is it safe to eat vegetables which have been grown on soil irrigated by a septic tank effluent?"

It is only safe if the vegetables have been cooked.

Vegetables which are eaten raw, such as radish and lettuce should not be grown on areas which may receive a sewage effluent.

Distance of Sewage Pump Well and Absorption Field From Water Supply.

It is impracticable to state any minimum distance from an underground water supply at which it is safe to discharge sewage on or into the soil.

The sewage disposal system and the well should be as far removed from each other as possible and in no case should a septic tank effluent be discharged on or into the ground within 100 feet of a well or other water supply.

OPERATION INSTRUCTIONS

Septic Tank.

The scum which gathers on the surface of the tank should not be disturbed unless it exceeds 12 inches in depth when part of it should be removed.

The scum, by excluding light and air from the liquid, provides the conditions under which the bacteria multiply on its under surface and in the solid which settle to the bottom of the tank.

When the solids in the base of the tank reach a depth of 15 inches they should be removed and ploughed into the ground.

This will necessitate pumping out the tank once or at the most twice yearly.

Dosing Chamber.

Before starting the system the syphon must be filled with water. The manhole cover on the dosing chamber should be lifted once a week and the action of the syphon examined.

If the flush is not acting properly the bell of the syphon should be removed, the syphon filled with water and the bell replaced.

Sewage Pump Well

A float with indicating rod projecting through the roof of the pump well can easily be arranged to show when the well requires emptying.

The sewage should not be allowed to rise higher than a level which is six inches below the overflow from the septic tank.

Any solids or scum which may be present in the pump well should be removed when the septic tank is being cleaned out.

Care should be taken to prevent fouling of the ground below the pump discharge. A watertight chute or pipe should be used to convey the liquid to the wagon or to the point at which it is discharged on the ground.

Absorption Field

The cover on the distributing manhole should be lifted once weekly and the operation of the system noted.

Protection Against Frost

Not later than October 1st of each year all pipe lines, field tiles, manholes and tanks which are less than seven feet below the surface should be covered with a layer of damp pressed straw 12 inches thick.

This layer should extend four feet on each side of tanks and pipes.

Manure must not be used for this purpose; not only is it insanitary, but it will not protect the ground sufficiently against frost.

General Conclusions.

The conclusions arrived at from a study of the information embodied in the foregoing pages may be stated briefly as follows:

1. The cesspool is an obsolete and unsatisfactory method of sewage treatment or disposal. The construction of cesspools is contrary to law.

2. No matter what means of final disposal of the effluent are adopted, a septic tank must be built in every case for the treatment of the sewage.

3. A septic tank will remove the greater part of the solids from the sewage and so lessen its offensiveness. Those solids which remain in the tank will accumulate and will require to be removed by hand, once or twice yearly.

4. The effluent from a septic tank is just as dangerous to health as the raw sewage discharged from the house.

5. Where the basement is not drained and the soil pipe leaves the house at a shallow depth the septic tank should be built close up to the house.

6. No septic tank effluent or liquid wastes may be discharged into a creek, river or lake, unless a special permit has been obtained from the commissioner of public health.

7. The discharge of a septic tank effluent or of liquid wastes into the subsoil within the limits of any city, town or village in the province is contrary to law.

8. If the subsoil shows signs of sand or gravel an absorption field should be made and the effluent from the tank disposed of underground.

9. If the subsoil is clay throughout, the construction of an artificial absorption field is useless, and unless a surface outlet is available the tank effluent must be pumped.

10. Septic tanks and pipe lines may be successfully operated during winter at shallow depths if certain requirements noted in this report are observed.

11. A system of sewage disposal whether surface or underground should be as far removed from the house and from any source of domestic water supply as practicable.

EDITORIAL COMMENT

USING THE HELPS PROVIDED

THE present turn of business is said to call for the exercise of all possible factors to help merchandising. It has been described as a return to a period when "real salesmanship counts." The educational work undertaken on behalf of the plumbing and heating engineers by the National Trade Extension Bureau of the U.S., much of which has been extended to the Canadian trade through *Sanitary Engineer*, is a potent factor in helping to speed a return to normal conditions in this trade. In this issue will be found a sample of the results obtained by a Canadian plumber through the application of some of the helps offered by the U.S. Bureau. Much valuable data along similar lines is outlined in every issue of *Sanitary Engineer*, and due attention should be given all such helps in the interests of a quicker return to normal conditions.

THE PROBLEMS OF HEATING COSTS

THE annual coal consumption in Canada for domestic purposes is nearly 7,000,000 tons which, if we allow a cost of \$15 per ton, represents a yearly expenditure of some \$105,000,000, says Conservation. With increasing population and the gradual extension of settlement northerly, this consumption will naturally increase; any effort, therefore, having for its object a substantial reduction in our domestic heating bill, is worthy of public attention.

The hope of relief, entertained by some, through electric heating from our water-powers, has been definitely shattered by the fact that, outside of the question of cost, the demand would far exceed the supply available. For instance, in Quebec and Ontario, alone, assuming a population of some 5,000,000, a total of probably not less than 10,000,000 h.p.—and costing from \$150,000,000 to \$200,000,000 per annum—would be required to supply electrical heat. The power available within the more thickly populated portion of these two provinces, even including Canada's equity in the great possibilities of the St. Lawrence and Niagara rivers—the greatest water-power rivers in the world—only amounts to about 5 1-2 million horse power.

The possibilities and economic efficiency of central heating plants are thought to be particularly applicable to Canadian conditions or to any country with long winters. Due to the initial cost of the underground distribution piping system, the plants usually involve heavy overhead expenses; when the plant is used intensively and during long periods each year, the charges can be spread over longer periods than would be the case for systems only used during shorter periods, as in certain localities in the United States. Another economy would result from the possibility of using the cheaper grades of coal, instead of the expensive anthracite now commonly used in Eastern Canada. Suitable boilers with automatic stokers and smoke-consumers would overcome some of the present disabilities in the use of the inferior fuels.

PROPHYLACTIC PLUMBING

THAT formidable looking word means "guarding against"; more particularly, through usage by medical men, guarding against disease. Ever since the days of open plumbing every step of progress might be said to have made plumbing still more "prophylactic" from the standpoint of sanitation—of guarding against disease.

But we are thinking of "prophylactic" plumbing in another sense—in the sense of a different preventive service. No modern sanitary engineer gives a place of primary importance in his business to the petty emergency repairs of winter—the frozen pipes and other mishaps of cold weather. We hope the modern sanitary engineer sends "Bill" to look after these because the sanitary engineer, himself, is busy with a big contract.

We hope to see every sanitary engineer giving such "prophylactic" service—service that guards against frozen pipes and emergency repairs, service that prevents defects, builds good will, and more and greater business, so that about the time "Bill" is ready, through experience, for this larger, worthier work, his old job on emergency repairs will have practically disappeared. Do not neglect service. This change of character in a plumbing business comes through attention to quality, efficiency, service.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Montreal.—Long & Maynard, plumbers, have dissolved partnership.

CRANE COMPANY WAREHOUSE IN LONDON

London, Ont.—The Crane Company, of Chicago, has purchased a site for a warehouse on York street opposite the Grand Trunk freight sheds, and plans are being prepared for a three-story warehouse. The firm plans to make London a distribution center for hardware and plumbing supplies for Western Ontario. Work on the new building will be commenced in a few weeks.

READJUST HEALTH AND WATERWORKS DEPARTMENTS

Winnipeg.—Readjustment of civic department duties, to be recommended by a sub-committee, will place the domestic and high pressure water systems completely in charge of the superintendent of waterworks, city officials announced.

The waterworks superintendent under the scheme will take over from the engineer's department the operation of wells, reservoirs, well lines and the pumping stations as well as the high pressure plant.

The street commissioner will take over from the health department the collection and disposal of garbage, refuse and ashes.

CITY LAW TO REGULATE NEW HEATING PLANTS

Toronto.—The city building by-law is to be amended in accordance with legislation just obtained by the city giving it power to regulate the installation of heating plants in houses. The new bill does not empower the city to specify the size of furnaces, although there has been considerable complaint that some installations have been too small to heat the houses in which they were set up. The city did not ask for this provision, inasmuch as it would be held responsible in case the heating plant was inadequate. All the city architect will be able to do is to make regulations regarding the installation. These will have reference to the position of the furnace and the pipes. In some instances pipes were found to be horizontal instead of slanting upward, the effect being that the heat would not rise to the upper floors. The city architect will frame a regulation fixing the angle at which they should be placed and also as to their location from a fire standpoint.

"Store Trade Brisk," Says Plumber But Outside Work is Slack—Says Ottawa Architects Hold Out Little Hope of Much Building

IN the opinion of John McKinley, of the Ottawa plumbing firm of McKinley and Northwood, the outlook for the plumbing and steamfitting trade locally is anything but promising. "We have one or two big jobs for the summer, and I understand two or three of our competitors have also lined up some big work," said Mr. McKinley, "but on the whole the trade will suffer as it has not suffered for several years from lack of work."

"No matter what architects you go to, they all tell you the same story: nothing doing, and very little prospects of there being anything doing for several months."

"As far as prices are concerned there has been a slight reduction in some lines of hardware and plumbing material, but general building material continues high and is responsible for delaying a lot of work which would go ahead otherwise."

There were two big jobs here which we had hoped tenders would be called for this spring, but at present there are no indications of any movement in that direction. I refer to the new civic hospital, which is conceded to be a three-million-dollar job, and the new collegiate institute, on Bronson Avenue, which will run into the hundreds of thousands. A number of us are waiting for a chance to tender on the plumbing for these jobs.

"The winter months have been exceedingly dull for the plumbers in general. The weather has been exceptionally mild and as a consequence there have been very few mishaps. Conditions are more unsettled than they have been for years and I do not think this applies to Ottawa alone."

"As far as we are personally concerned our store trade has kept fairly brisk, but the outside work has been very slack."

Alberta Plumbers in Convention

Many Interesting Addresses Delivered Before Annual Convention of Alberta Sanitary and Heating Engineers in Lethbridge

LETHBRIDGE, ALTA.—The annual convention of the Alberta Association of Sanitary and Heating Engineers has just been concluded here and the deliberations during the three days of conference were very helpful. The convention was opened in St. Augustine's Hall with the usual procedure of registration, receiving reports and appointing committees. At the afternoon session of the opening day a lecture entitled "Septic Tanks for Domestic Purposes; Their Construction, Action and Preparation of Disposal Beds" was delivered by S. Jennings, Edmonton. This address was followed by a general discussion.

Jas. Marr, sr., Calgary, addressed the convention on the subject "Proposed Method to Reduce the Cost of Plumbing Installations in Small Houses." This address brought out many interesting points considered in the following discussion. This session was concluded with some comments on trade conditions

with representatives of the wholesale trade.

At the second day's session reports of committees were received, officers nominated and other business transacted. This was followed in the afternoon by an address by E. J. Young, Calgary, on the subject, "Fixed Charge and Operating Cost and Method of Conducting Business." This was followed by much interesting discussion. An address on "Simplified Form of Bookkeeping and How to Keep Records of Contracts" was given by Wm. Parker and E. J. Sehl, of Lethbridge. The final session consisted of the election of officers and other business.

A feature of the convention was the presentation of the proposition of the National Trade Extension Bureau. Mention was made of the various services of the bureau along the lines of fixed charges and operating costs, estimating and contracting, accounting, etc.

EXTEND PIPE LINE

Winnipeg.—The provincial Government will bear part of the cost of extending the pipe line system for supplying the town of Tuxedo with water, according to an announcement by Hon. C. D. McPherson. The cost of the project will be about \$130,000, it is estimated. Legislation authorizing the expenditure of the Government's share may be introduced into the legislature this week.

COMPEL SANITARY DISH WASHING

Winnipeg.—Regulations to compel the sanitary cleansing of dishes in restaurants, pop factories, hotels and other public places where food is consumed in large quantities will be asked by the city department of food inspection. The object of the regulation, which will be presented to the city council in the form of a by-law, is to prevent the spread of disease and epidemics by contagion. "The theory of aerial contagion is gradually giving way to a theory of contagion by direct contact with germ carriers," said Inspector Rigby.

"The fact that germs are transmitted by unclean dishes is widely accepted by authorities and we hope to eliminate a great deal of danger of contagion by stricter regulations for dish washing in public places.

"The by-law will be submitted to the council for consideration at an early date, and will be governed by practical requirements of the places concerned."

BAD WATER IN PORT CREDIT

Port Credit.—The water supply of Port Credit does not meet with the approval of the Provincial Department of Health. The village council has been notified that 98 per cent. of the water in the wells of the village is polluted and unfit for use.

At its meeting the council discussed the problem. A municipal water supply system, it was felt, would cost more than the village could afford. Estimates on the cost of a new system, presented by E. A. James & Company, provided for an expenditure of \$100,000 for the installation, without providing for the small mains. This estimate is \$50,000 less than the one presented last December, the difference being due to lower cost of materials and labor.

The council is anxious to provide pure water for the town, but it feels that the cost of a waterworks system is prohibitive. The facts will be laid before the Government.

Ottawa.—Damages to the extent of \$600,000, together with an injunction to prevent further use of the "Moore Filter," an appliance held to be "especially adapted for the filtration of previous metal bearing slimes," claimed by the Moore Filter Company, of New York, from the Nipissing Mining Company of Ontario in a statement of claim filed with the registrar of the Exchequer Court in Ottawa.

Development of Montreal Sewer System**J. H. Valiquette Discussed the Progress Made in an Interesting Paper Read Before the Montreal Branch of the Engineering Institute of Canada**

Montreal.—The sewerage system of Montreal was discussed in an interesting paper by J. H. Valiquette, of the technical branch of the city engineering department, before the Montreal branch of the Engineering Institute of Canada, commencing with the incorporation of the city in 1841, when there was practically no modern sewerage system, to the present day network of conduits, representing 525 miles of sewer construction.

From 1841 to 1851 the work had progressed to 22 miles of brick sewers and 3½ miles of wooden conduits. These proved to be unsatisfactory, the wood fast decaying and the brick work continually falling in. Engineers estimated at this time that repairs had cost more than it would have taken to build a construction that would last a century.

Better progress was made in the years following; from 1860 to 1874, numerous new sewers were built. In 1862 a by-law was passed empowering the city to construct sewers in any part of the city. In 1875 one of the main sewers, Craig Street, was commenced and finished in 1878. This sewer was still in very good condition. In 1888 a high level

sewer was built to overcome floods consequent upon connections with adjoining municipalities. From 1898 to 1916 the city had nearly trebled its population, and sewers had to be constructed in accordance. It was in this latter year that most of present system was completed.

Cause of Disease

Sir John Kennedy also spoke of conditions in the early '50's, when there was a very imperfect system of drainage. It was in those days that the terrible outbreak of cholera occurred in Montreal, when this disease proved fatal to many people. A canvass was made as to the cause of the outbreak, the old ideas of food, bad fruit and other things being given as the chief reason for so many deaths. Finally, however, the solution was found in the water supply, poisoned by contact with the sewage of the city. It was this outbreak, Sir John remembered, that had directed attention to the necessity for modern underground sewers and which had spurred the city fathers of those days to adopt plans leading ultimately to the system as it existed to-day.

Doings in Ottawa and District

The city of Ottawa will very shortly call for tenders for garbage collection. During the last three years the work has been carried on by the city under the supervision of the Commissioner of Works, but it is now felt that a considerable saving might be effected by having it done by contract. In fact, an offer has been made by Mr. Thomas O'Neil, of Ottawa, to do the work at a saving of approximately \$30,000 the first year.

Decrease in Outside Privies

A statement has been issued by the local health department to the effect that the vigorous campaign waged by the Department of Health the last few years to rid the city of outside privies has been productive of most encouraging results. In 1917 the amount spent on outside privy cleanings was \$6,000, while last year there were 196 cleanings, at a total cost of \$880. The city has now adopted the rule of insisting on the installation of sanitary arrangements on streets where drainage is provided.

Junk Business Unsanitary

Residents in the Chaudiere district are now engaged in an effort to rid the city,

and particularly that section of the city, of junk dealers, owing to the unsanitary nature of their occupation. The first victory was scored in the local police court on March 8, when Sachs Bros., one of the biggest junk firms, were fined \$10 and costs for keeping bones without a license. Several other cases of a similar nature are to be dealt with in the near future. In the meantime the city is asked to establish an area outside for junk shops and to discontinue issuing licenses for junk shops inside the city limits.

Criticizes Banks

Discussing building conditions with the local correspondent of Sanitary Engineer, J. Moffatt Ross, prominent real estate agent, said he thought it was a crime that the banks were sitting so tight upon their coffers. "If these banks would loosen up and lend some money to responsible builders, both this city and other cities throughout Canada would benefit in more ways than one," he said. Mr. Ross said he thought the Government should take a few million dollars a year away from the banks to teach them a lesson.

Announcement re Status of Tinsmiths

On Eve of Test Case to Establish Whether Tinsmiths are Liable for Taxation as Manufacturers, Government Issues Statement Removing Liability Pending Outcome of Case

OTTAWA, Ont.—Just as the stage setting was being completed for the hearing of the test case to establish the status of certain trades for the purposes of taxation, word has been given out by the Department of Customs and Inland Revenue that pending the decision in the test case those merchants who have been held to be liable for the manufacturers' license and tax will not be held so liable. The statement as signed by the Assistant Deputy Minister of Customs and Inland Revenue and approved by the Deputy Minister is as follows:

"Pending a decision in the 'test' case now before the court respecting the question as to whether merchant tinsmiths (etc.) are 'manufacturers' within the meaning of Section 19 BBB of the Special War Revenue Act, you are instructed that the following merchants will not be required to secure sales tax license, nor to pay sales tax, namely, merchant tinsmiths, harnessmakers," etc.

Subject of Keen Argument

The point involved has been a keen subject of argument for some time. Practically every gathering of tinsmiths has taken objection to the regulation which classed a tinsmith as a manufacturer merely because he makes a tin cup, an eavetrough or a stovepipe. The injustice of compelling such a merchant to take out a manufacturer's license at \$5 and compelling him to collect 2 per cent. sales tax on all such articles manufactured was early realized and on objection being taken, it was stated that a test case would be held. Meanwhile the Deputy Minister of Inland Revenue was credited with having stated that pending the test case no prosecutions would be made against merchants who failed to comply with the regulation. On the strength of his word the Retail Merchants' Association advised members who were liable that they need not comply with the law, and that the association would take the responsibility for such non-compliance. Nevertheless there were many who complied with the regulation in fear of the penalties provided by the Government.

The announcement just issued by the Deputy Minister of Inland Revenue is sufficient authority for all tinsmiths who are liable and who have withheld any such action, to continue without such license, pending the outcome of the test case.

Significant of Final Outcome

Such an official announcement coming out on the eve of the hearing of the case is considered by many to be significant that the stand taken by the Government will not be upheld. In any case it will be

an interesting discussion, and the result will have an important bearing on the future status of tinsmiths in Canada. Developments in this matter have been outlined fully in past issues of Sanitary Engineer and future issues will contain a complete report of the proceedings of the case at Ottawa. The expression of opinions of tinsmiths through Sanitary Engineer and at special gatherings has no doubt had an important bearing on the case and has undoubtedly helped to bring forth the assurance just given that they will not be liable pending the outcome of the case.

BUILDING TRADES OPPOSE WAGE SCALE

Montreal.—Some trouble may arise as a result of the application of the new scale of wages approved of by the General Contractors' Association. The bricklayers have apparently been the first body to show its opposition, and one firm has been notified that work would cease at once. As far as the other trades are concerned, no definite decision as to a strike has been reached. No action has yet been taken to reduce the plumbers' wages, and whether this will follow in the immediate future remains to be seen.

AN ACCIDENT QUITE LIKELY TO OCCUR WITH PLUMBER

Montreal.—An eight-year-old girl fell into an unprotected open manhole on a downtown street corner in Montreal. No hope is entertained that the child has survived, searchers only hoping that the body may be recovered.

The manhole had been opened for the purpose of disposing of snow and ice picked up off the streets, witnesses claiming that no protective grating was placed over the opening, nor was there any fence in the street to warn pedestrians. The Director of Public Works states that employees of the Road Department have orders to always place a grating and a protecting fence when opening manholes, and a thorough investigation will be made.

This exemplifies the great danger that lurks in the wake of the thoughtless or careless actions of persons held responsible for the safety of the public, and demonstrates that too much care cannot be taken to safeguard against accidents of such a nature.

Oftentimes the plumbing contractor must needs excavate in front of a private dwelling for the repairs to the water or sewerage system, or to install a plumbing contract, and great pains should be exercised to make sure that proper notices and warnings are posted.

WESTERN ONTARIO NEWS

George Ross, Blenheim, Ont., wants prices on heating and plumbing for new \$5,000 residence to be built in spring.

* * *

Frank Gunning, Ruthven, Ont., is preparing plans for new \$4,500 bungalow and wants prices on heating and plumbing.

L. G. Bridgeman, Bank of Commerce Building, London, Ont., is preparing plans for new residence to cost \$16,000. Hot water heating, plumbing and electrical work.

Waterworks, Tenders, Construction, Contracts Awarded, Etc.

WATERWORKS EXTENSIONS

Edmonton, Alta.—Tenders will be called shortly for supply of 6 inch and 8 inch cast iron pipe to cost about \$30,000 for city. J. W. Turner, Supt. Waterworks Dept.

London, Ont.—Previous contract for erection of filtration plant costing \$35,000 for city, which was placed with Permit Co., New York, has been cancelled and Utilities Commissioners will receive new tenders, no closing date set. Plans with E. V. Buchanan, manager of commission, Hydro Offices.

Winnipeg, Man.—Tenders will be called for construction of sewer in one street for city.

* * *

CONTRACTS AWARDED

Toronto.—Heating contracts for two stores and apartments, costing \$12,000 for P. H. Finney, 79 Adelaide St. E., are awarded to Howard Plumbing & Heating Co., 21 Howard Ave.

Calgary, Alta.—Plumbing and heating contracts for Technology and Normal school costing \$591,975 for Provincial Government are placed with James Ballyntyne Co., Ltd., Wall St., Winnipeg.

New Toronto.—Tenders for a new four roomed school, 21st street, were awarded by the Public School Board. James A. Wickett's tender for \$47,987 was accepted. The contract for plumbing, heating and wiring was awarded to A. J. Ingram, of New Toronto, for \$12,473.

Toronto, Ont.—City awarded following contracts for sewer construction: One street, McNight Construction Co., 88 St. David St.; two streets, A. Cavotti, 257 Euclid Ave.; one street, Murphy Contracting Co., 8 Wychwood Park; one street, National Contracting Co., 9 Gar-nock Ave.

* * *

TENDERS WANTED

Ignace, Ont.—Arthur Read, secretary-treasurer Ignace school board, will receive tenders for all trades required for erection of school costing \$21,000. Plans with secretary-treasurer, and W. W. Lachance, architect, 98 St. Paul St., St. Catharines, Ont.

Great Village, N.S.—Tenders will be called shortly for erection of Masonic Hall to cost about \$5,500 for Corinthian Lodge A. F. & A. M. Jos. S. McLellan, architect, Great Village, N.S.

Fredericton, N.B.—Tenders will be called shortly for sewer extension estimated to cost \$40,000 for city. G. C. McDowell, engineer, 282 York St.

Kingsville, Ont.—Rev. J. M. Horton, rector Epiphany Church, will receive tenders, no closing date set, for erection of Parish Hall, estimated to cost \$12,000. Plans with Thos. Jenner, architect.

Kitchener, Ont.—Ross & McDonald, 1 Belmont St., Montreal, and 61 Front St.,

Toronto, architects, have plans and will call tenders for erection of Y.M.C.A. building estimated to cost \$150,000. Plans with J. F. McKellar, secretary, Kitchener.

Montreal.—Heating tenders will be received for stores and office costing \$85,000 for University of Montreal.

* * *

CONSTRUCTION

Cobourg, Ont.—Provincial Government, Dept. of Public Works, will repair hospital.

Erection of addition to school for Separate School Board, 477 Jarvis St., is contemplated.

Separate School Board, 477 Jarvis St., contemplates building school in Holy Rosary Parish.

Repairing Hospital is contemplated by Public Works Dept., Provincial Govt.

Paincourt, Ont.—School section No. 3 plans erection of convent costing \$10,000. Wm. E. Primeau, secretary-treasurer.

Parry Sound, Ont.—Repairs to public buildings estimated to cost \$42,000 are contemplated by Public Works Dept., Provincial Government.

West Vancouver, B.C.—Erection of new school and addition to school at cost of \$50,000 is contemplated by West Vancouver School Board. W. C. Thompson, secretary.

Chatham, Ont.—Erection of a nurses' home at estimated cost of \$50,000 on Emma St. is contemplated by General Hospital Board. C. E. Beeston, secretary-treasurer, Chatham.

Whitby, Ont.—Erection of school is contemplated by town council. A. T. Lawler, chairman School Board. Repairing Hospital is contemplated by Public Works Dept., Provincial Government.

Halifax, N.S.—General contract for alterations to office building costing \$40,000 for Phoenix Fire Insurance Co., 17 St. John St., Montreal, Que., is awarded to John MacInnes & Son, 61 Lower Water St., Halifax.

Walkerton, Ont.—School board contemplates erecting new wing to High School and equipping gymnasium and new physical and chemical laboratory, work estimated to cost \$25,000.

Toronto, Ont.—Provincial Government, Dept. of Public Works, has included in supplementary estimates repairs to Osgoode Hall, maintenance and repairs to Parliament Buildings, and repairs to Normal and Model Schools.

Deloraine, Man.—J. M. George, secretary-treasurer of Deloraine Hospital Board, will receive tenders until March 24th for erection of hospital estimated to cost \$16,000. Separate tenders will be received for several sub-trades. Plans with secretary-treasurer, and J. H. G. Russell, architect, 1110 McArthur Bldg., Winnipeg.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

SEVERAL changes are shown in prices of staple lines, though in most cases the reductions are small. A new list issued shows a decline in the price of steel pipe, but wrought iron pipe is unchanged. Some lines of pipe fittings have also been revised, and nipples show a lower level. Reductions have been made in the price of lead traps and bends, and most grades of solders show a slight decline. The lighter gauges of corrugated galvanized sheets are lower. Plumbers' oakum shows another reduction in price, and the tendency in cotton waste is easier.

Bar iron and some lines of steel are showing lower quotations, but sheets and plates are being held at recent declines. Copper and brass in sheets, rods and tubing are at a lower level. In ingot metals there is not a great change, and tin is practically the only metal that shows much varia-

tion since the last report, and this metal continues to sag, but lead and spelter are inclined to be firmer. No changes have been made in prices of soil pipe, enamelled wares, compression goods, range boilers or conductor pipe.

The outside primary metal markets are reported quiet, and the offer of lower quotations does not stimulate the demand. Non-ferrous metals are regarded as exceptionally low priced at present. Iron and steel products continue to show declines in prices, but Pittsburgh reports indicate that the steel industry as a whole is not operating at much more than 40 per cent. of capacity.

A slight increase in business activity is reported and another two or three weeks should show a better demand for plumbing goods with the approach of spring and a revival of building operations.

MONTREAL

MONTREAL, March 12.—Many staple articles and lines of plumbing goods have reached lower levels. Although slight reductions in most cases, they are of interest to the plumbing trade. Wrought iron and steel pipe are now selling under a new list, No. 49, lower prices being given on steel piping. Relative to this, nipples have been revised. Corrugated sheets in 26 and 28-gauge are reduced \$1 per 100 sq. ft., other gauges show no change in prices but are reported easier. Lead traps and bends are quoted 10% off list, and solders of all grades, except wire solder, are one cent per pound less. A reduction of from 20 to 30 cents per 100 pounds is quoted on base prices of bar iron and steel, while the finest grades of steel are 1½ cents a pound lower. Waste materials are easier, with lower prices given on many scrap metals. Enamelled ware, soil pipe, plumbers' oakum, range boilers and compression goods all maintain their former prices. Eavetrough and conductor pipe are also holding at same discounts.

An improvement is noted on most lines and business is said to be gradually becoming more active. With open weather prevailing, toward the end of the present month should revive the trading of practically all lines of plumbing goods.

Candlewick Now 46c Pound

Montreal.

A new lower price is made on candlewick packing and it is now selling at 46 cents per pound.

Sink Bolts 62½% Off List

Montreal.

The new discount on sink bolts is 62½ per cent. off list price.

Piping Under New List

Montreal.

Wrought iron and steel pipe is now selling under a new list. List No. 49 is now substituted in place of No. 48. Practically all sizes of steel pipe are

quoted about 4 per cent. lower, while wrought iron piping remains unchanged as under the old list. Stocks are in good shape, and the demand has shown some improvement over the previous slow months. Following is a copy of the new list:

Price List No. 49.		March 1st, 1921

Some Fittings Revised

Montreal.

Relative to the change in pipe prices, nipples show a revision in price. From ½ to 4 in. close and short, are now 40 per cent. off, longer 50 per cent. off. From 4½ to 8 in., close and short, 30 per cent. off, and longer 40 per cent. off list. There is no change in the other lines of fittings, and following is the changed price list:

Bushings, cast	20%

Class C	0 13 0 20
Add 17½%.	

Enamelled Ware Prices Hold

Montreal.
Prices on enamelled ware are holding unchanged, with more activity now being shown in the demand. Dealers report a decided improvement during this month, and it is thought that sales will now become better as the season is opening up, and building will before long be in evidence. Present quotations are as follows:

Sinks, roll rim, 18x30 in.	18 40
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$6 00 \$5 92 \$5 84

18x24" Apron F154 or P3845 or P3847 ..	18 82
18x21" Apron F169 or P4205	14 08
17x19" Roll Rim, F241 or P4345	10 08

Closets Also Unchanged

Montreal.
Dealers in enamelled ware report that contracts are now coming to hand in goodly numbers, and this has its direct results on the sales of closets. The demand has increased materially during the past few weeks, but dealers have only been ordering their present needs. Prices on closets are unchanged and are quoted as follows:

Closet, standard outfit	\$34 00
Do., with post hinge seat	35 00
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat ..	37 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	12 00
Do., reversible trap bowl, less spud	13 25
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	17 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies, less seat	19 00

No Change in Range Boilers

Montreal.
Range boiler prices are maintained, holding at the declines of the first of the year. In line with other lines of plumbing supplies, these are more active than they were during the winter months, and the demand will likely increase as the season advances. Quotations are as follows:

RANGE BOILERS—	Stand.	Ex.	Hvy.
30-gallon	13 00	15 00	00
35-gallon	15 00	17 00	00
40-gallon	17 00	19 00	00
52-gallon	24 00	26 00	00
66-gallon	32 00	34 00	00
82-gallon	42 00	44 00	00
100-gallon	50 00	52 00	00
120-gallon	60 00	62 00	00

Some Corrugated Sheets Lower

Montreal.
The lighter gauges of corrugated sheets show a decline of \$1.00 per 100 sq. ft. list, applying to both 28 and 26 gauge. The remaining gauges are unchanged, but are by no means steady. Stocks are quite heavy in the hands of the jobbers, the demand continuing light. Following are present prices:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	9 50
No. 26 gauge	10 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00
Less 7½%.	
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.	

Sheet Prices are Nominal

Montreal.
Plates, black sheets and galvanized sheets are unchanged in price this week, but these prices are only nominal. Whether lower prices will prevail on sheets and plates depends to a degree on stocks at present in the warehouses, and when these are depleted it may cause slightly lower levels, as present stocks represent a higher market than exists to-day. This, however, will result in a revision rather than any great decline. Reports from the United States fields state that present prices will likely be maintained for some time at least, the price cutting seemingly being well over. Following are the nominal quotations:

PLATES—	
10 gauge	6 25
12 gauge	6 30
14 gauge	6 45
16 gauge	6 55

BLACK SHEETS—	
10 gauge	6 50
12 gauge	6 55
14 gauge	6 60
16 gauge	6 80
18-20 gauge	7 95
22-24 gauge	8 00
26 gauge	8 10
28 gauge	8 20
Sheets 36 in. wide, 10c. per 100 lbs. extra.	

GALVANIZED SHEETS—	
U.S. Standard—	
10½ gauge	10 75
28 gauge	10 25
26 gauge	10 00
22 and 24 gauge	9 85
20 gauge	9 65
18 gauge	9 65
16 gauge	9 50
English Standard—	
28 gauge	12 00
26 gauge	11 75
24 gauge	11 15
22 gauge	10 80
18 and 20 gauge	10 10

NOTE.—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Bar Iron and Steel Reduced

Montreal.
Lower quotations are made on practically all lines of bar iron and steel. The base prices on bar iron, iron finished machinery steel, mild steel, band steel, sleighshoe steel, tire steel and harrow tooth steel are 20 cents per 100 lbs. lower. Refined iron and toe calk steel shows a decline of 30 cents per 100 lbs. Mining tooth steel and Black Diamond tool and cast steel are now quoted at 23 cents a pound, formerly being 24½ cents. Following are the new quotations:

Common bar iron, 100 lbs.	4 00
Refined iron	5 50
Iron finish machinery steel	4 05
Mild steel	4 00
Single reeled machinery steel	6 80
Band steel	4 00
Spring steel	6 00
Sleighshoe steel	4 00
Tire steel	4 20
Toe calk steel	4 90
Harrow tooth steel	4 15
Mining tooth steel, per lb.	0 23
Black Diamond tool and cast steel, per lb.	0 23

NOTE.—Refined iron is approximately \$1.50 per

100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Flats, iron and steel, 3-16 and thinner, 50c per 100 lbs. extra.

Compression Goods Hold

Montreal.
Compression goods remain unchanged in price, with the demand reported still light, but showing some improvement in the last two weeks. Following are the prevailing quotations:

Compression work, standard	34%
Fuller work, standard	30%
Bath cocks, compression	25%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard ..	34%
Roundway stop and waste cocks, standard ..	34%
Brass steam cocks, standard	10%
Radiator valves, standard	23%
Do., removable disc	38%
Globe, angle and check valves, standard ..	5%
Gate or straightway	Net
Jenkins globe	10%
Jenkins gate valves	10/7%

Boiler Tubes Quiet

Montreal.
Very little change is noted in boiler tube sales, the demand remaining quiet and orders are for very small quantities. Prices remain at the decline of two weeks ago and are as follows:

BOILER TUBES—	Seamless Lapweld
1 inch	26 00
1½ inch	27 25
1½ inch	26 25
1½ inch	29 75
2 inch	29 25
2½ inch	33 00
2½ inch	44 75
3 inch	49 25
3½ inch	63 50
4 inch	85 00

Some Lead Products Reduced

Montreal.
The demand for the different lines of lead products has kept up fairly well during the quiet winter months, and since the beginning of the month more activity has been shown. A gradual reduction has been made from time to time on the different lines, and this issue shows lower quotations on lead traps and bends and solders. Traps and bends are now selling at 10 per cent. off list, formerly being net list. Solders are one cent per pound less throughout, with the exception of wire solder. Present prices are the following:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs, sq. ft., lb.	0 10¾
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼ lb. extra and cut sheets to size, ¾ lb. extra.	
Solder, guaranteed, lb.	0 26
Do., strictly, lb.	0 24
Do., commercial, lb.	0 21
Do., wiping, lb.	0 21¾
Do., wire, lb.	0 35
Zinc sheets, casks	0 14
Do., broken lots	0 15½

Soil Pipe Improves

Montreal.
A better volume of business is now being done in soil pipe and fittings. This is in accordance with many other lines of plumbing materials, and greater activity is expected to gradually become evident. No change is made in quotations of either piping or fittings, and following are present prices:

SOIL PIPE (medium and extra heavy)—
2, 3, 10%; 5 and 6-inch, 15% discount.
4-inch, 20% discount.
8-inch, add 20% to list.

FITTINGS—

2 to 6 inch fittings, 40 per cent. discount.
8-inch, net.

Oakum Shows no Change

Montreal.

Plumbers' oakum is unchanged in price, selling at \$4.50 per 50-lb. bale, with an extra charge of one cent per pound for broken quantities.

Eavetrough at Same Discounts

Montreal.

Eavetrough and conductor pipe are still selling at 50 per cent. and 10 per cent. off list, and conductor elbows at 50 per cent. off, these prices being given out early in the new year. Buying is still curtailed, dealers holding off until the consuming demand opens with the spring weather. Next month will no doubt bring a more active demand. Following are the list prices and discounts:

EAVETROUGH—

O.G. Square Bead—		Per 100 ft.	
8 in.	15 90	15 inch	28 80
10 in.	17 70	18 inch	36 80
12 in.	21 20		
O.G. Round, and Half Round—		Per 100 ft.	
8 in.	16 90	15 inch	29 80
10 in.	18 70	18 inch	37 80
12 in.	22 20		

Discount 50/10% off list.

CONDUCTOR PIPE—

	Per 100 Ft.
2 in.	18 40
3 in.	22 30
4 in.	29 60
5 in.	40 00
6 in.	49 00

Discount 50/10% off.

CONDUCTOR ELBOWS—

Plain round or round corrugated—		
2 inch	5 25	
3 inch	6 00	
4 inch	10 50	
5 inch	24 00	
6 inch	29 00	

Metal Lath Unchanged

Montreal.

Prices on metal lath are unchanged, and small orders are now being forwarded. The building trade will have a strengthening effect on the sales of this material. Following are the quotations:

METAL LATH.

Painted—		
26 gauge, sq. yd.	0 42	
24 gauge, sq. yd.	0 48	
23 gauge, sq. yd.	0 57	
Galvanized, 11c per sq. yd. extra.		
Discount 10%.		

Scrap Metals Easier

Montreal.

An easier tendency is shown on many waste metals, the market remaining very dull. Yellow brass is reduced one cent per pound, scrap zinc also one cent lower. Tea lead is now down to 2 cents a pound, and heavy copper reduced ½ cent. Scrap pipe and boiler plate have declined ½ cent and 1 cent respectively. Following are the nominal quotations:

Dealer's Buying Prices.

Automobile tires	0 75
Yellow brass	0 06
Red brass	0 11
Light brass	0 04½
Scrap zinc	0 04
Lead, heavy	0 04
Lead, tea	0 02
Light copper	0 09
Heavy copper	0 11

White Cotton	0 20
Colored Cotton	0 15

Above lines subject to trade discount for quantity.

Radiators and Boilers Unchanged

Montreal.

With few actual sales being made in radiators and boilers, business can hardly be reported dull. Prospects are coming to hand in good numbers, and although yet early for contracts to be let on many buildings, dealers state this season is showing well for heating contracts. Prices are holding and are as follows:

Revised radiator list prices fare for 1, 2, 3, 4, and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 40% for hot water and 41% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 30%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 50 off list.

Square or sectional hot water or steam boilers, 15-in., list price.

For Ontario Government trimmings add 5 per cent. to list.

Square or sectional water boilers, 19-in to 36-

in., 2½ per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., list price. Ontario Government trimmings, add 5 per cent.

Square or sectional water or steam boilers, 48-in., list prices. Ontario Government trimmings, add 5 per cent.

Round steam boilers, standard trimmings, 5 per cent. off. Ontario Government trimmings, list price.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Ingot Metals Quiet

Montreal.

Ingot metals are generally dull and quiet, with no great change in prices. A temporary advance may be caused from from the European situation, and this is being watched very closely at present.

TIN.—Tin continues to show further declines, and £150 has been reached on the London market. The opinion is expressed, however, that the bottom has now been reached. Local price is a little easier at 37 cents.

COPPER.—Little activity is shown in copper, the market being very quiet, having a slightly easier tone if anything. Local prices show very little change and are quoted at 18½ cents for electro and 18¼ cents for casting.

SPELTER.—Spelter has had a sharp advance in London, owing to the possibility of the German supply being cut off. Whether this will hold depends on the political situation. Local price is a little stronger at 8 cents.

LEAD.—The strength shown last week in London has again faded, and the market has lapsed into dullness. Little change in prices is looked for. Local quotation 6¼ cents.

ANTIMONY.—Antimony is said to be a little easier owing to the weakness of silver. The local market continues dull and unchanged at 7¼ cents.

ALUMINUM.—This metal continues dull, showing signs of being slightly easier this week. Local price 34 cents.

* * *

TORONTO MARKETS

TORONTO, March 12.—The chief feature of the price changes in plumbing and steamfitting goods is the new list price on pipe. A reduction of a little over 4 per cent. is shown on steel pipe, but wrought remains unchanged. The changes on pipe have affected nipples, which have been revised, and show a decline. Cast iron fittings are also reduced in price. Lead traps and bends are again quoted at a lower level, and solder prices are a trifle easier. Other changes include reductions in sheets, rods and tubing of copper and brass. A reduction has been made in the price of 26 and 28-gauge corrugated galvanized sheets, but the heavier gauges are unchanged. Bar iron and steel has been reduced in price. Oakum prices have been revised, and plumbers' oakum is quoted at lower prices. In ingot metals tin is showing a decline, but the tendency of lead and spelter is firmer. Enamelled wares, closets, radiators, range boilers, conductor pipe, etc., are held unchanged. Business continues fairly quiet, but with the early approach of spring and a resumption of building activity an improvement is shortly looked for.

Reductions on Steel Pipe

Toronto.

A new list has been put out on pipe this month, making the first change in

prices on this product since last July. The new list, No. 49, shows a reduction of between 4 and 5 per cent. on black and galvanized steel pipe. Wrought iron

pipe remains unaffected. The demand is smaller now, but with the approach of spring and an increase in building operations an improvement in sales is expected. Stocks are in fairly good shape just now, and the shortages of last season have been generally made good. The following is the new list:

Price List No. 49. March 1st, 1921

Standard Butt Weld Pipe.					
Per 100 feet.

Revisions in Fittings

Toronto. Further revisions have been made in fitting prices, and in malleables B and C goods are down one cent. Cast iron fittings are now 15 per cent. off list in place of 10 per cent., cast iron plugs are quoted at 25 per cent., solid ditto at 10 per cent., and countersunk ditto at net list. The changes on pipe have caused wrought nipples to be revised, and 1/2 inch to 4 inch, black and galvanized, in close and short, are now 40 per cent. off list, with long nipples at 50 per cent. Sales show very little change and scarcely any improvement is noted yet. The new quotations are the following:

Cast iron fittings	15%
Plugs, solid	25%
Do., cast	10%
Do., countersunk	Net list
Bushings	25%
Unions, 1/4 in. to 2 in.	35%
Do., 1/2 in., 2 1/2 in. to 4 in.	30%
Dart-Unions, blk., 1/4 in. to 2 in.	20%
Do., 1/2 in., 2 1/2 in. to 4 in.	8%
Do., galvanized, add to black	30%
Wrought Nipples—	
Close and short, 4" and under	40%
Do., 4 1/2" and larger	30%
Long, 4" and under	50%
Do., 4 1/2" and larger	40%
Running thread, 4" and under	20%
Do., 4 1/2" and larger	
Wrought Couplings—	
Standard, 4" and under	20%

MALLEABLE FITTINGS

Class A	0 60	0 75
Class B	0 25	0 35
Class C	0 16	0 25

Soil Pipe Unchanged

Toronto. Business continues to be relatively quiet in this line, and this next month should register an improvement. Stocks are reported to be ample, for normal demands. The quotations which are unchanged are as follows:

SOIL PIPE (medium and extra heavy)—

2 and 3 inch, 10%.
4 inch, 20%.
5 and 6 inch, 15%.
8 inch, add 5%.
FITTINGS—
2 to 6 inch fittings, 40%.
8 inch fittings, plus 5%.

Bar Iron Slightly Lower

Toronto.

The base price on bar iron and steel has been revised since the last report and is 75 cents per cwt. lower, being now quoted at \$4.50. There is very little change in sales and buying has been withheld largely until business conditions improve. Stocks as a result are smaller than usual, and a revival of activity should create a good demand. Declines in quotations are reported on pig iron from Pittsburg markets and present production is at the rate of 50 per cent. of productive capacity. The following are quotations here:

IRON AND STEEL	
Common bar steel, 3-16 in. and lighter ...	\$ 4 50
Do., 1/4 in. and heavier	4 00
Common bar iron, 3-16 in. and lighter ...	4 50
Do., 1/4 in. and heavier	4 00
Angle base	4 50
Horseshoe iron	6 00
Tire steel	5 95
Band steel	5 00

Mining drill steel	28 00
Crucible cast sheet steel	
Sheet cast steel	35 00
Sleighshoe steel	6 00
Norway iron	15 00
Toe caulk iron	6 70
Hoop steel	6 00

Wares are Unchanged

Toronto.

There is no change to record in ware prices. Sales continue to be moderately light, but the approach of spring and a renewal of building operations are being looked forward to, and it is believed that an improvement will shortly be manifested. Stocks are in fair shape and the following are the quotations:

Bath tubs, 5 1/2 ft.	57 10
All Steel Enamel Baths, 4, 4 1/2 or 5 ft., net	\$16 25

Closets are Quiet

Toronto.

There is little improvement shown in the demand for these goods and the quiet season has not entirely passed. Wholesalers' stocks are in fair shape for ordinary demands and quotations remain as follows:

Closet, standard outfit	\$32 00
Do., with post hinge seat	33 00
17x10" Apron F139 or P4045	15 30
Do., white vitro, vitreous china or enamel-iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for 3/4 in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50

Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies	18 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 40

Lead Traps and Bends Decline

Toronto.

A lower price has been made on lead traps and bends, which are now quoted at 10 per cent. off list. Former quotations were net list. Solder is inclined to be weaker, but shows no quotable change. At the present time there is a slightly firmer tone in the outside primary lead markets, though the demand is not showing much increase. Enquiries are reported to be more numerous, however. The following are quotations here:

Lead pipe, list, per lb.	0 12 1/2
Lead waste pipe, list, per lb.	0 13 1/2
Do., over 8 in., list, per lb.	0 14 1/2

Calking lead	0 08 0 09

Eavestrough Unchanged

Toronto.

Business in eavetrough and conductor pipe remains quiet and little change has been made in the past two weeks. Wholesalers report that stocks are ample and deliveries of material are made promptly now. Prices show no changes since the early part of the year, and are as follows:

TROUGH (Eave)

O. G., Square Bead and half round.	Size in girth:	Per 100 ft.	Per 100 ft.
8-in.	\$15 90	15-in.	\$28 80
10-in.	17 70	18-in.	36 50
12-in.	21 20		
	Less 50/10 per cent.		

PIPE (Conductor)

Plain, round or corrugated.	
Per 100 ft. in 10 ft. lengths.	
2 in., in 10-ft. lengths, list	\$18 40
3 in., in 10-ft. lengths, list	22 30
4 in., in 10-ft. lengths, list	29 60
5 in., in 10-ft. lengths, list	40 00
6 in., in 10-ft. lengths, list	49 00
	Less 50/10%.

Conductor Elbows Quiet

Toronto.

With pipe and trough the demand for conductor elbows is small at the present time and stocks are ample for all needs. Prices are unchanged and the following are the current quotations:

ROUND CORRUGATED OR CRIMPED ELBOWS	
2 inch, list	\$5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
	Less 50%.

Range Boilers Steady

Toronto.

Prices on range boilers remain steady at the declines made early in the present year, and there is no indication of further changes. While business is lighter than usual there is a better tone evident. An electric welded boiler is being quoted at \$11.75 in the 30-gallon size, and a 40-gallon size at \$16.50. The

quotations on riveted boilers are the following:

RANGE BOILERS—		
	Standard	Ex. Heavy
30 gallon	\$13 00	\$15 00
35 gallon	15 00	17 00
40 gallon	17 00	19 00
52 gallon	24 00	28 00
66 gallon	32 00	38 00
82 gallon	40 00	50 00
100 gallon	50 00	60 00
120 gallon	60 00	70 00

Radiators are Unchanged

Toronto.

There has been no change in quotations on radiators and hot water boilers, and discounts remain 40 per cent. off list for hot water, and 41 per cent. for steam. Although there is little increase of activity yet, prospects appear more hopeful. The following are present quotations:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
Discount 40% for hot water and 41% for steam.
Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 39%.

Boiler Tubes Easier

Toronto.

A little improvement is shown in the demand for these, but sales are not as heavy as they should be at this season. Stocks are reported to be sufficient for all reasonable demands. Quotations show slight reductions in some sizes, and are as follows:

BOILER TUBES—		
	Seamless	Lapweld
1 inch	\$28 00	\$.....
1 1/4 inch	30 00
1 1/2 inch	32 00
1 3/4 inch	33 00
2 inch	35 00	28 00
2 1/4 inch	38 00	32 00
2 1/2 inch	46 00	36 00
3 inch	54 00	45 75
3 1/2 inch	70 00	46 00
4 inch	92 00	60 00

Compression Work Unchanged

Toronto.

Prices are holding at recent changes on compression work. Very little improvement in the demand is noted yet. Stocks are in fair shape for the opening of the spring trade. The following are the current quotations:

Compression work, standard	34%
Fuller work, standard	30%
Bath cocks, compression	25%
Do., Fuller	25%
Flatway stop and waste cocks, standard	34%
Roundway stop and waste cocks, stand.	34%
Brass steam cocks, standard	10%
Globe, angle and check valves, standard	5%
J. M. T.	10%
J.M.T. C.	15%
Gate or straightway	7/10%
Jenkins Globe	10%
Radiator valves, standard	23%
Do., removable discs	38%
Emco J. D. Valves	10%
Emco Check Valves	10%
Webber Gate Valves	15%

Sheet Prices Maintained

Toronto.

There is little change shown in either prices or sales of black and galvanized sheets, and plates are also unchanged. The future price tendency is uncertain, many wholesalers claiming that present quotations show little margin of profit. On the U.S. markets the independent mills are quoting \$5.25 for 28 gauge galvanized sheets, as compared with \$5.70 at year ago, but premiums were

the rule at that time. To-day's prices are \$2.00 below the average price of last year. The English market is very slow and prices have been declining there lately. The following are current quotations here:

BLACK SHEETS

14 gauge	6 30	7 70
16 gauge	6 40	7 75
18-20 gauge	6 75	7 80
22-24 gauge	6 80	7 85
26 gauge	6 85	7 90
28 gauge	7 00	8 00

PLATES

10 gauge plate	6 20
12 gauge	6 25
14 gauge	6 30
16 gauge	6 40

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

An extra 10c per 100 lbs. is also charged on sheets 36 inches wide.

GALVANIZED SHEETS

Premier and Apollo

10% oz.	9 40	10 30
U.S. 28 gauge	9 00	10 00
U.S. 26 gauge	8 70	9 75
22 and 24 gauge	8 55	9 50
18 and 20 gauge	8 40	9 35
16 gauge	8 25	9 20
12 and 14 gauge	8 20	9 15

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charged on galvanized sheets, 10% oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Light Corrugated Sheets Down

Toronto.

A reduction of approximately 10 per cent. has been made in the price of 26 and 28 gauge corrugated galvanized sheets, which are now quoted at \$10.25 and \$9.50 per cwt., less 7 1/2 per cent. The other gauges remain unchanged. Business is comparatively light on these lines at the present time, but should improve from now on. The new quotations are the following:

CORRUGATED SHEETS—		
	Per 100	Sq. Ft.
No. 28 gauge	9 50	
No. 26 gauge	10 25	
No. 24 gauge	16 00	
No. 22 gauge	19 00	
No. 20 gauge	22 00	
No. 18 gauge	28 00	
Less 7 1/2%.		
Lighter than 24 gauge and wider than 27 in.		
75c per square extra.		

Plumbers' Oakum Lower

Toronto.

Revisions have been made again in oakum prices and plumbers' oakum is lower at \$8.25 per 100 lbs., less 10 per cent., in bales. For small quantities the quotations are from 10 to 11 cents per pound.

Cotton Waste Easier

Toronto.

Although prices are nominally unchanged on cotton waste the tendency appears easier, and other cotton products are showing further declines. There is said to be a fair amount of business for the season. Quotations are as under:

* WASTE		
Cream, Polishing	0 21 3/4	
WHITE		
XXX	0 20 1/2	
XX	0 18 1/2	
X	0 17 1/2

Above lines subject to trade discount for quantities.	

Brass and Copper Sheets Lower

Toronto.

With the declines in the primary markets on copper there is a lowering of prices in the manufactured metal. Copper rods, sheets and tubes are lower, and the same is applicable to brass. Following are the base prices on these lines:

BRASS—	
Sheets, base, per lb.	\$0 29
Rods, base, per pound	0 26
Tubing, base, per lb.	0 36
COPPER—	
Rods, base, per pound	0 34
Soft sheets, plain, 16-oz. and heavier, lb.	0 34
Do., plain tinned	0 40
Do., polished and tinned	0 45
Tubing	0 39

White Lead in Oil

Toronto.

No further changes have been made in white lead in oil prices, and in less than ton lots it is still quoted at \$15.30 per cwt. Dry red lead is quoted at \$15 per cwt. on 100-lb. casks. Linseed oil in single barrels is 95 cents per gallon, and turpentine \$1.00 per gallon.

Scrap Metals Still Quiet

Toronto.

A continued quiet and dull tone pervades the scrap metal market, and prices are practically unchanged. The weakness of virgin copper, the slump in tin, and the reductions in lead prices have combined to make the non-ferrous scrap metals very uncertain in values. The tendency for iron and steel scrap is also lower. The following are nominal quotations for fair-sized quantities:

WASTE MATERIAL

No. 2 busheling	13 00
Stove plate, per ton	19 00
Scrap pipe	8 00
Yellow brass	6 50
Red brass	10 00
No. 1 machinery cast	24 00
Heavy melting steel	15 00
Heavy copper	10 50
Light copper	8 00
Scrap zinc	3 75
Light brass	4 00
R.Rd. wrought iron, No. 1, per gr. ton	13 50
Heavy lead pipe	3 75
Old rubbers, boots and shoes	3 00
Overshoes, lumbermen's rub. boots	2 00
Bicycle tires	0 75
Automobile tires	0 50
Tea lead	1 75

Ingots Quiet and Dull

Toronto.

Ingots remain quiet and dull and scarcely any improvement is recorded. Even for a quiet season the market is said to be remarkably dull. Tin is the chief feature, with a decline of 2 cents. Other metals remain unchanged locally, although showing a somewhat firmer tone on U. S. and English markets. All

MUELLER **1½ inch Waste** **and Overflow** **A-2435**

This **MUELLER** connection, because of several late improvements in construction, can be installed much quicker than any other make. The waste elbow and overflow are cast brass, overflow strainer is cast and the waste strainer is of heavy wrought brass.

Toronto By-law Requires **1½ inch Waterway**

Toronto City By-law demands that 1½ in. waste and overflow be used, as being perfect in construction, capable of the best service and entirely satisfactory in every way.

Correct designs, the right raw materials and a fine precision in workmanship, make **MUELLER Brass Goods** stand every test and give dependable and enduring service.

Write for catalogue and prices. Mail orders given immediate attention.

Mueller Metals Co., Port Huron, Mich., Makers of "Red Tip" Brass Rod; Brass and Copper Tubing; Forgings and Castings in Brass, Bronze and Aluminum; Die Castings in White Metal and Aluminum; also Screw Machined Products.

non-ferrous metals are regarded as exceptionally low in price at the present time and copper and lead are practically back to pre-war prices, and are said to be costing more to produce than present selling prices.

TIN.—This is the one metal showing a decline since last report. Prices have declined on London markets, and the weakness of sterling has also tended to bring down prices on this side of the Atlantic. On New York markets it reached 28 cents, the lowest figure it has been sold at for twelve years. Local markets are listless, with quotations lower at 38 cents.

COPPER.—Drifting and showing little life is the report on this. The situation in Europe is expected to mean the withdrawal of Germany as a buyer of copper in U. S. markets, and as they were buying large quantities of copper from the States, it may affect prices there. Further shading is reported in outside markets. Prices here are held unchanged at 19 cents for casting copper.

LEAD.—A little firmer tone is reported in lead markets. Quotations are £18 at London against £16 10s, the lowest point of last month. Four dollars continues to be quoted at New York and St. Louis. Prices here are down to \$6.

SPELTER.—This at present is extremely dull. Despite the lowness of price there is a slightly firmer tone to the market. Prices are steady at \$7.

ANTIMONY.—Consumers of this metal showed little interest lately and prices are unaltered at 8 to 9 cents.

ALUMINUM.—There has been no material change in this and it continues dull, though with an improvement in the auto-motive industry dealers expect an increase of interest. Quotations remain unchanged at 35 to 37 cents.

WROUGHT IRON AND STEEL PIPE

Continued from page 18

any building. Experience has shown that cast iron is apparently unaffected by the deteriorating influences within house drainage."

In conclusion let me state our situation in Winnipeg.

In revising our Plumbing and Drainage By-law a year ago we eliminated the use of steel pipe and required all screw pipe to be genuine wrought iron and this provision will go into force on the 1st June next, but that has involved us in almost a worse predicament, as we are at a loss to know how we are definitely going to distinguish between genuine wrought iron and steel pipe. I feel that the only sure course to steer is to eliminate screw pipe as much as possible, and that is our intention.

In this country we are not likely to follow the example of our cousins to the South, in erecting extremely high buildings, indeed the building by-laws of Winnipeg limit the height of buildings to 215 feet and not more than twelve stories high, therefore I consider there

To Investigate Broken Water Main

Administrative Commission in Montreal Asked to Furnish Full Information

AN echo of the bursting of a water main on St. Urbain Street, Montreal, when two children were drowned, was heard in a complaint which was laid on the table at a recent meeting of the city council, pending the securing of the following information from the administrative commission:

1. By whom were the water pipes that burst on St. Urbain Street, Sunday, February 20, 1921, supplied?

2. When did the company that supplied the said water pipes commence business?

3. Was any guarantee given at the time of the purchase of the water pipes?

4. Did the persons who supplied these pipes establish that they had sold similar pipes before to any other municipality in Canada or in the United States?

5. Was there any report made against the buying of these pipes, and, if so, by whom?

6. What other firms tendered for these water pipes at the time the contract was given?

7. What was the cause of the breaking of the water main on St. Urbain Street at the time of the accident?

8. On how many other occasions have these water pipes and mains burst since they have been laid?

9. What claims for damages, if any, have been filed against the city of Montreal as a result of the bursting of these water mains since the time they have been installed?

10. If these water pipes burst before, was the cause of the same ascertained and was a report of the same made, and, if so, what was the report?

11. What measures were taken by the municipal authorities to prevent further accidents of a similar nature?

12. Why did the administrative commission state through the press that all similar water pipes installed in the city would have to be replaced?

is no advantage in using screw pipe, and many advantages in using cast iron pipe. In the Eaton building at present under construction, and which is nine stories, in height, all soil and rain water stacks have been constructed with cast iron piping.

I believe I have clearly demonstrated that not only are there many advantages to be gained in using cast iron in plumbing and drainage work, but that there is also much more satisfaction to be derived from the knowledge that the job will last as long as the building it serves.

If I might be permitted to say a word to the manufacturers of cast iron pipe it would be this. You have built up a reputation which places cast iron pipe in an unassailable position for use in plumbing and drainage work, and it should be your endeavor to retain that position by using only the best of raw material for your products.

BIG SUMS SPENT ON WATER PURIFICATION

Dr. J. W. S. McCullough of Toronto, Ontario Provincial Health Officer, in the course of an address delivered a few days ago before the Canadian section of the American Waterworks Association, stated that a sum exceeding \$7,000,000 had been expended during the past year by municipalities in Ontario in the purification of water supply. Linking chlorination with filtration is the plan recommended to "make assurance doubly sure." He stated that in the past decade, as a result of the purification of the water systems in Ontario, typhoid fever has been reduced from 31.5 to 5.2 per thousand, which figures, if accurate, amply

justify the outlay of a huge sum of money on water purification. Every municipality installing a water filtration plant must now, he says, submit the plans to the Provincial Board of Health before the work is undertaken.

EXPECT BIGGEST BUILDING YEAR IN HISTORY

City Architect Price of Toronto states to Sanitary Engineer that it is now more than likely that the present year will prove to be one of the biggest, if not the biggest, building year in the history of the city. It is estimated conservatively that building to the value of \$35,000,000 is in prospect in the city of Toronto. Reports from other parts of Canada are said to provide an equally rosy outlook. In Winnipeg, for example, the latest estimate is that \$14,000,000 worth of building, the largest since pre-war days, is contemplated.

Frank A. Miller, Kingsville, Ont., wants prices at once on steam heating system in connection with business block he has purchased.

* * *

William Rawson, Kingsville, Ont., wants prices at once on heating, plumbing and electrical work in connection with new \$4,500 residence.

* * *

The council at Wheatley, Ont., will take up with the Provincial Health authorities shortly the question of installing a waterworks system.

* * *

Robert Yates, of Wardsville, Ont., wants prices on heating and plumbing in connection with new store to cost \$10,000.

Pipe Fittings

*Made
in
Canada*

Dominion Wide Recognition

M Brand Pipe Fittings give a service and satisfaction that will invariably get you re-orders and much new business as well.

A trial of the goods will prove this claim.

Malleable Fittings with this brand mean fittings made of *Air Furnace* Refined Iron, reamed and tapped to gauge with perfect threads.

Cast Iron Fittings with this brand mean fittings made with iron of high tensile strength—proper proportions and correct tappings.

Recessed drainage fittings. Standard and extra heavy flanged fittings and flanges. Galvanizing malleable and gray iron castings of all kinds.

Cut Your Labor Cost

Did you ever figure what it costs you to change dies in the ordinary die stock? How much time is spent in looking for loose dies and bushings? Do you know you can cut a thread with a "Beaver" in the time it takes to change dies with most tools? You cannot afford to-day to use poor or worn-out tools. Many jobbers in Canada carry a complete line of Beaver

Easy Working Die Stocks and Beaver Square-End Cutters. You can cut your labor costs by telephoning for one to-day.

The Beaver Catalog No. 14 is the most complete Die Stock catalog ever issued. We'll gladly send it.

Order from your own jobber.

Send for these folders, to-day!

Clip the coupon below and let us send you these two beautiful illustrated folders. They cost you nothing but will give you a world of information—a big help in solving your heater problems.

THE
Royal
automatic

The folder on the left tells how 25 to 40 gallons of steaming hot water can be automatically maintained in the home, ready for instant delivery at all connected faucets, by a tiny gas flame no bigger than the blaze of a match. No fuss. No muss. No complications. A simple and profitable installation that any plumber can easily understand.

The other folder describes our Marvel Non-Automatic, a combined range boiler and gas water heater that takes the place of the old "sore thumb" or side-arm contraption. The Marvel is the most economical non-automatic gas water heater made and gives absolute satisfaction.

Know these facts. They are important in your business. Clip the coupon now.

Products Cover Canada

*"If it's an EMPIRE product
you know it's right"*

THIS EMPIRE self-closing basin cock is a universal favorite on account of its improved design. By reference to the sectional illustration its superior points may be noted and appreciated.

Rollers are made of specially hard nickel alloy and will last a lifetime.

Its use in connection with the hot water side of systems will result in a great saving of hot water and fuel. It cannot rust and will wear much longer than the ordinary basin cock.

We make a complete line of sanitary fixtures and plumbing supplies. Jobbers everywhere handle EMPIRE products, and your needs will be given prompt attention.

Seeing is Believing

A Little
"Straight Talk"
to the Canadian
Plumbing Trade

Ten minutes ago a well-to-do Toronto business man sat down at my desk to discuss a business deal. He glanced up at a display rack showing a mahogany, oak and blanco white seat hanging on the office wall and immediately admired the white seat, asking the price. We told him we did not sell the consumer; he asked that we add plumber's profit and ship one to his home. He paid cash for the seat and stated that he had been looking for this fixture for some time.

The object lesson we want to drive home is your opportunity to show this product to the hundreds of thousands of house owners, who never drift into our office, and we will gladly pay to the first plumber in Toronto the 25 per cent. we added in this particular transaction who will go out and get convinced by selling one of these seats through showing something up-to-date to the numberless house owners, awaiting his aggression.

Yours for Efficiency and Service,

Electric Weld Range

Is There a
Think of the power

Electrically Welded

This broken crankshaft of the great steamship "Imperator" was repaired by electric welding. The enormous power developed by the great engines of such ships is delivered through the crankshaft. The torque is tremendous; the leverage of the crankshaft must turn the shaft and propeller, and so move the ship.

Canadian John Wood
Toronto

The Quality

Boiler

Greater Proof of Efficiency?

Transmitted by a Ship's Crankshaft!

THESE strictly modern range boilers are made by the same process that is reliable and efficient enough to mend a ship's crankshaft. Electric Weld Range Boilers are the latest milestone along the highway of progress; they are a step ahead, just as kerosene lamps were, then gas, and now the incandescent light.

Engineers to-day know the perfection of the electrically welded joint; that is why electric welding is supplanting the old-fashioned methods in ship-building, locomotive building, for mending large gear wheels, broken castings in high-pressure pump bodies, and many similar things for which the strongest joint obtainable is wanted. So, you see, Electric Welding is in full keeping with the other superior, modern features of Electric Weld, The Quality Range Boiler.

Reliable Sanitary

Salable Goods with a Reputation

A-1900
Quatern
Basin
Cock

The outstanding essential in a modern home is a modern bathroom. Paramount essentials in a modern bathroom are modern, pleasing, durable, pressure-resisting Bath Cocks, Basin Cocks, and Ball Cocks.

Our High-Grade Quatern Goods for these purposes are a standardized, uniform line, with interchangeable and replaceable working parts.

They are distinct in design, with high nickel finish, adding quality and refinement to never-failing service.

Install, with the modern white enamel sink, the modern, stoutly-designed, highly-finished, quick-opening Quatern Faucet. Pull the lever towards you one-quarter turn for full opening. To close, throw the lever from you one-quarter turn, the pressure helps you; these close with the pressure.

A-1000
Sink Faucet

Bath Cock
A-3200

These Quaterns are the last word in Faucets; they are the demonstrators, speak for themselves, and bring the plumber another job from the "Folks next door" before he leaves the neighborhood.

Equipment for Service

Classic Quatern Standard Mixing Faucet with swinging spout for kitchen sinks, nickel-plated, with china index handles.

The spout has a radius of 6 inches and can be pushed back out of the way.

ACTUAL SIZE OF SHEET

This illustration shows a sample sheet of Allpriser Service. Plumbers will readily see how easily and speedily they can locate a given article connected with the trade.

Put Allpriser on your payroll; you will find it a reliable price clerk who works faithfully in your service, giving you the right price at the right time, the whole year round.

ALLPRISER

The Reliable Price Clerk

Protects Your Buying and Selling Prices

TO make your contracts pay, you must give correct estimates, and safe estimating depends on right pricing. If you sell an article for 7 cents that has cost you 7 cents, you are sure losing money.

You are a busy man and cannot follow the markets as closely as you would like. Allpriser can, and does follow the markets so closely as to keep you supplied with the latest cost of materials.

Proof of Allpriser Efficiency

Many large plumbing concerns and manufacturers of plumbing fixtures take several copies of Allpriser. These concerns know and appreciate the value of Allpriser as a practical insurance on pricing—it saves them money—and if it can save money for them it can surely do it for you. Errors are not made purposely but come unexpectedly, and your next mistake may cost you many dollars.

Allpriser service—the reliable price clerk, through this dependable check on pricing, lowers your “overhead” and increases your bank book.

Allpriser is a worthwhile investment of 7 cents a day that will, in a year's business, save you hundreds of dollars. A postcard will bring convincing literature and sample sheets. Do it now while you think of it.

Kenneth B. Allison

4 Irwin Ave.

Toronto

Allpriser Service consists of a flexible leather bound book 7 by 9, of 150 loose-leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest changes.

"Standard" PLUMBING FIXTURES

Greater Building Activity in 1921

That there is a tremendous shortage of houses, office, and other buildings, needs no demonstration; everybody knows the existing condition of the building industry in Canada.

Housing accommodation is taxed to the limit, companies are clamoring for space in office buildings, business concerns are anxious to increase their premises.

Under the laws of economics, the balance between supply and demand of

buildings must inevitably be restored. The question is, when?

In 1919 permits for building amounting to over \$81,000,000 were issued. This seemed a sure indication of increased building activity in the spring of 1920. Much building was done then, but, because of high cost of labor and material, not as much work was completed as permits had been issued for. The result is that the contemplated but deferred

building for 1920 must be carried forward to swell the already enormous amount of deferred building that must be done sooner or later. In 1920 permits to over \$107,000,000 in value were issued.

1921 seems likely to see the general resumption of building. Materials, which constitute a large percentage of building expense, have decreased in cost. Men have become more productive, which reduces the cost of labor. Deflation has largely been completed. Any further reductions in cost must come, chiefly, from increased production and ingenious economies in management.

Those who wait too long to build will be adversely affected by the heavy demand and possibly rising prices, when a general resumption of building takes place. Anxiety on this score discourages further waiting for prices to drop still lower.

The prospects for building have been slowly accumulating, like a huge snowball rolled up, laboriously, to a hilltop. The snowball is about to commence its downward journey now, gathering speed and size as it descends. 1921 will be a good building year with consequent plentiful sales, installations, and prosperity for the plumbing trade.

Clears Clogged Pipe

Cleans Closet Bowls

Thaws Frozen Pipe Quickly

Desolvo sells continuously because it makes good and brings re-orders from satisfied customers. This handy cleaner for sewer and drain pipes mixes with cold water and generates heat. It thaws out rain water leaders, frozen drains, and soil pipe stacks with perfect safety to pipes and plumbing fixtures.

Your customers like Desolvo and buy it regularly in quantities because they know it does the work quicker, at lower cost, and with less effort.

Twenty years' experience in the chemical manufacturing industry has enabled us to embody in Desolvo all the improvements and progress in modern science and methods of manufacture.

Desolvo quickly wins a permanent place in the regard and esteem of your customers.

It "makes good" so promptly and effectively that it holds your old customers, and, through the rapid spread of its good reputation, constantly gains new ones.

It pays to stock Desolvo; it pays to display it well, and it pays in the ever-increasing volume of quick, easy, profitable sales.

Does a Better Job in Less Time

Guaranteed to give complete satisfaction

Royal

AUTOMATIC

Your customer is interested in—

—a gas water heater that heats water in the shortest time, with the lowest consumption of gas.

Marvel

NON-AUTOMATIC

You are interested in—

—a gas water heater that is easier and quicker to install, pays a generous profit, and makes a neat job.

And a B-M Heater meets both demands.

For a B-M Heater **does** heat water quicker and at a **lower** cost than the ordinary side-arm combination. By combining range boiler and heater in one—the Royal or the Marvel—gives the greatest possible efficiency by conserving and putting to work every heat unit. This is exactly what your customer wants.

To the plumber's interest—it takes less time, by far, to install a B-M Heater. You have at least seven less connections to make than when installing the ordinary side-arm heater. And your installation is made at a lower cost to the customer through the elimination of the extra pipe, couplings and fittings. A B-M Heater is delivered completely assembled, ready to install.

Investigate these two B-M Heaters. They'll reflect to your credit through the absolute satisfaction they give. Send for literature and latest trade net price list.

Gurney Round Hot Water Boiler

Every year there are more than a thousand Gurney-Oxford Furnaces sold in Toronto alone, and thousands of them are distributed from coast to coast.

The Gurney-Oxford Furnace is as nearly troubleproof as it is possible to make iron and steel, and its installation insures both Comfort and Economy for your customers, and reflected good-will for you.

By installing Gurney-Oxford Furnaces you are establishing your business on the surest foundation known—satisfied and delighted customers who return to you with future business, and eagerly recommend your services to their friends.

If you are not already handling Gurney-Oxford Furnaces, investigate; they are builders of profitable and permanent business.

The Gurney Foundry Co.
LIMITED

Cooking and Heating Apparatus
TORONTO, CANADA

In the illustration of this popular and efficient Gurney Hot Water Boiler, we particularly invite your attention to the Economizer, the insloped walls of the fire-pot and first section, the push-nipple connections, and the extra capacity of the first section.

The first section over the fire is double the thickness or depth of other sections, with bell-mouthed smoke flues through it, giving a large, inclined, extra surface directly over the fire. The sloping walls of this fire-pot—outside of which the water travels—and our perfected grate-bars, assure satisfaction.

Cased Gurney Oxford Furnace

You—And the Owners of This Hotel

A MODERN hotel or apartment goes up in your community. Do the owners of the building give you a vote of thanks when they pay the bill? They ought to!

For a plumbing and steam-fitting job in one of these buildings nowadays is something to be proud of.

Few people realize the skill, patience, and downright good workmanship going into one of these jobs—with its gigantic system of steam pipes, water pipes, drainage pipes, electrical conduits—each doing its own important work—all under perfect control—an architectural wonder of the age.

If you have successfully completed a job like this, you can meet the owners of such a building with just pride. For back of that job was experience, planning, careful choice of tools, and the right handling of men, calculated to get the results you promised and agreed to deliver.

Let a business man know that you have

done away with those old fashioned jams, botches, bruises, and badly fitted work that used to make the plumber's job a *joke*, and are hiring the most modern tools—like the GTD kind—and he will realize the really fine service you are equipped to give him.

Yes—you can thread *one* piece of pipe with any old worn out tool—but it won't meet the terms of a modern contract where there are *hundreds* of threads to cut—hundreds of joints to make, and miles of pipe to fit. There you need the GTD Receding Pipe Threader, the "Trio" Die Stock and the GTD Pipe Wrench, a sturdy line of improved helpers.

Hire these tools today. Put them to work on the next job—and see how they double the value of your time and the work you are doing.

Do you want to know just how these GTD products excel over other tools? Here's how to find out, use the coupon—or send your name on a postal.

"PUSSYFOOT" CLOSET TANKS

The "Pussyfoot" Closet Tank is the newest and most up-to-date tank on the market.

It combines skilled design with handsome finish, and satisfies customers with its efficient service.

The "Pussyfoot" costs no more than ordinary closets, and is fully guaranteed. Silent, efficient, and durable.

This "Pussyfoot" Tank is guaranteed to the extent that no matter how many years it has been in use, if a fault of material or workmanship shows, we will replace with a new tank.

The defective tank must be sent to us for inspection.

Years of Experience in Meeting the Plumbers' Needs

We are satisfied with nothing short of perfection. When you sell a customer C. M. C. products you can be positively certain of their being perfect. Our policy towards the customer is that he is always right. We buy as well as sell on quality and all our goods carry our absolute guarantee. That is why our business has grown from a humble beginning to be one of the largest in Canada.

Our 35 years of an established trade, during which time C. M. C. products have stood the test, is a guarantee of satisfaction. Dealers appreciate our unusual facilities for prompt shipments.

Early Activity in Plumbing and Heating

Conditions Similar to Those of 1919—Shortage of Goods Later in Year May Be Experienced—Effect of New Building Soon to Be Felt—Expect Little Change in Brass Goods Prices—Eliminate “False Propaganda”

IN order to give the plumbing and heating engineers some definite data to help them to get a right perspective on the outlook in the plumbing and heating trades, the opinions of a number of manufacturers and supply firms have been secured which, on the basis of the trend of business during the first three months of this year, give some indication of what might be expected in the near future.

1921 Similar to 1919

“In comparing business of the first three months of this year with that of other years it must be remembered that the early part of 1920 was an abnormal time,” stated T. A. Stevens, president and general manager Empire Brass Mfg. Co., Ltd., London, Ont., to Sanitary Engineer. “Jobbers were buying ahead for the purpose of having a stock in anticipation of a very busy year.

“The early part of 1919, however, was the reverse of 1920 and corresponded very closely to the first three months of the present year. Later on, however, as soon as Spring opened up, every one became busy and there was a shortage of goods. The result being that every one was crowded and could not supply the goods in anything like decent time after the order was placed.

“It appears to us that 1921 is going to be very similar to 1919. The plumbers are buying just what they need for work they have on hand and contracts they get from time to time. The jobber is not laying in a stock. He is simply buying for his actual needs from day to day—showing that he has no great amount on hand, that his stock is depleted and apparently is waiting to see what the future will bring forth.

May Be Shortage of Goods

“We think this is to some extent a mistake. The manufacturer will very likely be in the same position a little later on in regard to being able to supply the demand as he was in 1919. As far as we are able to ascertain there will not be any reduction in the price of brass goods beyond the present prices. Prices have been reduced and they are not likely to go any lower.

“The brass manufacturers did not raise their prices during 1920, whereas those manufacturing iron goods in connection with plumbing goods raised their prices during 1920. Consequently they were able to make a greater reduction in prices in 1921 than the brass manufacturers. Under these circumstances, we think the job-

ber is quite safe in laying in a reasonable stock of goods.

“Comparing our sales for the first two and a half months of this year with the corresponding months in 1919, we find that our sales are greater than they were during those months and we are looking forward to a very busy year. Possibly it may be a little slow in opening up, but in our opinion there will be all the business we can possibly handle.”

Effect of Building Soon Expected on Plumbing Goods

Pointing out that while business in the past three months has been very scarce, and that this is customary during the early months of the year, G. A. Walker, of H. Mueller Mfg. Co., Sarnia, made the following statement to Sanitary Engineer:

“March usually starts off with a fair number of orders. This year, however, they have been coming in more slowly, due, I suppose, to the present depression and lack of confidence on the part of jobbers to stock brass goods, as they are sure that there will be a drop in them. Of course, our view of this does not coincide with theirs, as we fully believe present prices will be sustained for some time to come.

“It will be some time before building has progressed far enough to demand our goods, but as there is considerable building going on, or contemplated, we look for a fairly good-sized lot of orders in the very near future. By summer time we anticipate the usual amount of business and through the past winter have endeavored to hold our organization for a good business year. Customers are buying now only for their immediate needs and our salesmen have had little success in persuading them to stock anything more than is absolutely necessary.

“It is just possible that the lack of work this winter and short hours will stop considerable building on the part of a certain percentage of the population that otherwise would have done some building, and this may have the effect of reducing the sale of plumbing goods to some extent. Building reports which we have received lately lead us to believe that plumbing business will be just as good in the last eight months of 1921 as was experienced last year.

Insufficient Confidence

“Cost of steel, and the fact that money is rather tight, is partly responsible for the fact that not many factories are being erected because of the unwillingness

on the part of those having to advance the capital to wait for some months before production could be obtained and profits realized. This, taken along with the uncertainty of future markets and prices, is keeping many prospective manufacturers out of the field. A large part of this is due to the fact, I believe, that there is not enough confidence displayed by the average Canadian in the future for 1921. They are hanging back, afraid to venture, and to some extent this will affect building.

Good Expectations for 1921.

"So far as prices are concerned, copper, which forms about 85% of the metal used in our plumbing goods is lower than it has been for years. Some close students of business say that there is some likelihood of another small rise in prices, but of course we view this as being only a statement put forth by those who are just as likely to make mistakes as any of us. We have great expectations for 1921, and have full confidence that we will do as much business or more than has ever been done by this plant."

Eliminate the Camouflage.

Taking the stand that it is time to eliminate the camouflage and false propaganda and deal with the situation on its true merits, G. E. Fisher, manager Canadian Brass Co., Galt, Ont., makes the following statement:

"Business for the first three months of the present year has been conspicuous by its absence, and no concern trying to operate a manufacturing plant has been able to break even during this period. The remaining nine months are as much your guess as ours, but it will be seriously benefited by an honest desire on the part of every one connected with the business to tell the truth to one another and a determination to refrain from lurid forecasts of the future, unless they are willing to do their part by backing their oral optimism with purchases to enable the wheels of commerce to keep on turning.

"As far as prices are concerned, we honestly believe that the lines we are interested in are consistent with conditions as they exist to-day, and as long as labor, which to-day is the big item, remains as it is, there should be little tendency towards lower cost. However, a time like this is not one when such a question can be intelligently discussed; what we want is more activity, or possibly more determination on the part of the plumbing trade to go out in the field and develop business. We know many manufacturers who firmly believe that general quiet times are opportunities to sell specialties. If the plumbing trade find it hard to get business on staple lines from the masses, they will find the classes with plenty of money to buy high grade specialties if they are properly presented."

C. A. Lusby, secretary and treasurer

Standard Drawn Up By Master Plumbers

Special Committee Recommends Schedule as Guide in Fixing Wages—Journeyman Satisfied—Mechanics, Plumbers and Steamfitters Be Paid According to Work Done

AT a special meeting of the Montreal Master Plumbers' Association, D. A. Bethune presiding, the report of the special committee appointed to study comparatively the amount of work performed by mechanics, plumbers and steamfitters, and the relation of the work done to the wages paid, was unanimously adopted by the association. The amount of work which a plumber does in the course of a day's work rather than the amount which he is paid per hour was the standard adopted.

Amherst Foundry Co., Amherst, N. S., states that at the present time there is nothing definite of an encouraging nature to outline. The experience of this firm during the first months of this year has been similar to some of the others quoted, namely, a shortage of business. Improvement in the outlook is expected, but it is thought this will perhaps not develop until about May. "We do not anticipate difficulty in getting supplies, neither do we look for a very heavy decline in prices," stated Mr. Lusby.

Speaking of the business outlook at the annual meeting of the Port Hope Sanitary Mfg. Co. in Toronto, President L. M. Wood made the following statement:

"The year 1920 opened with a rush and promised a largely increased business with good profits. Operating conditions, however, became so difficult on account of scarcity of raw materials, unreasonable demands from labor, and poor production, that the slump in business which developed in the Fall was in many respects a distinct relief.

"It has provided an opportunity to make those adjustments which were necessary to get back to conditions approaching normal, with the result that our plant is now operating on a much more satisfactory basis than for some time past.

"The outlook for the coming year is favorable. A great deal of new building is contemplated, particularly of that class in which the company's products are used. Prices of builders' materials are being reduced, and if harmonious conditions can be maintained between employer and employee by the recognition of the obligations on both sides, the chances are good that we shall have a period of active building which will continue for some years. Prices will, perhaps, decline further, but if so, the process is likely to be gradual, and builders who are waiting for drastic declines will, in our opinion, be disappointed."

The report declared that the members of the committee, after studying closely, and in many cases personally, the amount of work completed by each of their mechanics, were struck by the great disparity in the results obtained. In the course of their investigations it was clearly established that in certain cases some employees turned out three times the amount of work as did others who were working under practically the same conditions, and the committee considered it a handicap not only to the building trades in general and the plumbing and steamfitting in particular, but also a hardship to many of their workmen that the wages bore at present no relation to the efficiency and output of their mechanics.

The Shirker Protected by Uniform Rate of Wages

"Men must be judged by the work they perform and be paid accordingly," adds the report, "inasmuch as all men are not equally proficient at the trades, and to have a uniform rate of wages applicable to all engaged in a particular trade saps ambition and initiative, makes living easy for the slacker and the shirker, encourages discontent and dissatisfaction with their conditions among the workers generally, and ultimately places a burden on the public which it has no right to bear."

A Schedule Presented

The special committee, accompanying their report, presented a schedule of work, recommending that it should be adopted by the members of the association as a guide to them in fixing the wages to be paid their mechanics. The schedule deals with practically all work the master plumber contracts for, giving in detail the laying of water pipe, underground drains, roughing in and fitting a complete bathroom, installing hot water and steam boilers, including the placing of the boiler, the connecting of radiators, etc., stating the time that should be taken to complete the certain job, and a space for the actual time taken.

In order that the schedule would be concrete and practical the committee not only consulted its own members, but also the members of the association at two general meetings. As now drafted, representative journeymen, plumbers and steamfitters expressed themselves as being satisfied with its fairness.

The president stated that copies of this schedule would be printed in pamphlet form and distributed broadcast.

EXTENSIVE DISPLAY OF PLUMBING FIXTURES

The showroom of plumbing fixtures in T. McAvity & Sons, Ltd., store, St. John, N.B. Closet combinations are shown in the centre. Complete bathroom sets enclosed with tiling are shown on the right. These sets are held to be largely responsible for many sales made in this department. On the left are shown arrangements of sinks, laundry tubs, etc. The stock is kept clean and well polished and with plenty of natural light the department presents a striking appearance.

Showing Complete Bathroom Sets

Most Effective Way to Sell Bathroom Sets is to Show Prospect What They Will Look Like When Installations are Made—Seven Model Bathrooms to Choose From—Window Displays and Advertising Pull Together

“YOU can get it at McAvity’s,” is a slogan which applies with much force to the plumbing department of Messrs. T. McAvity & Sons, Ltd., of St. John, N. B. Although this firm have handled plumbing supplies on a large scale for many years, it was not until the beginning of last year that they decided to devote a special department to the displaying of bathroom fittings and fixtures. Before this new department was opened, the company used a portion of another department as a show room for this class of goods, but the business was increasing to such an extent that they were forced to find more space. It was decided to make a show room upstairs on the second floor, and devote it entirely to the displaying of bathroom fixtures. This new department is large and airy, with high ceilings, and is over one hundred feet in length and twenty-seven feet in width, giving a floor space of 2,700 square feet.

The floor is of polished hardwood and the walls are tiled all around the department to a height of five feet; the top part of the walls is panelled and painted in white enamel. The whole appearance is one of absolute cleanliness, and very favorably impresses visitors, who are always particularly struck by the sanitary appearance.

Seven Model Bathrooms.

Realizing that the most effective way of selling bathroom fixtures is to show the prospective buyer exactly what his bathroom will look like when all installations are made, Messrs. McAvity have completely fitted out no less than seven model bathrooms, each containing bath, toilet, lavatory, mirror, cabinet, towel rails, soap and sponge holders, toothbrush holder, and bath seat. With a selection of seven model bathrooms to choose from, customers have no difficulty in picking out an outfit that will satisfy

their tastes. Running along the centre of the department is a raised platform built for the purpose of displaying closets, traps and other fittings. This platform is also of polished hardwood, and is in keeping with all other woodwork in the department. It is particularly adapted for showing closets for private houses, hotels, factories, ships and railways, and displays to good advantage this class of goods. On the further end of this platform is displayed bubble fountains and pedestal wash bowls. The company does a large volume of business in this line of goods, practically all drinking fountains in the city of St. John having been purchased from them. On the left hand side of the wall is arranged a display of more than thirty different types of high and low back sinks, lavatories and wash bowls. These are attached to the wall at the correct height, and are complete with taps, plugs, etc., making the choice of

a sink or lavatory a very simple undertaking.

Show Case for Accessories.

At the far end of the department is a large glass fronted show case, used for the purpose of displaying glass and nickel towel rails, hangers, mirrors, soap dishes, sponge holders, tooth-brush holders and other accessories that go towards making a modern bathroom complete. This case is of solid oak, and the whole thing presents a very attractive appearance, being well stocked with the highly polished fittings on a dark green felt background. There is also an oil heating outfit for heating the bath water in summer time, when the housewife may be cutting down the coal bills by not using the kitchen range. This outfit is all coupled up ready for use, and can be demonstrated for the benefit of intending purchasers.

Practical Advice.

The plumbing department of T. McAvity & Sons, Ltd., is under the supervision of T. E. Clark, who is an expert in all matters pertaining to the modern plumbing of any home, and is in a position to give practical advice to intending customers. Mr. Clark has been many years in the employ of the company, and was chosen for this particular department because of his special ability in plumbing work. A large catalog was compiled by Mr. Clark some time back, and this catalog has been of great assistance to the company in securing business, and, containing as it does illustrations of many suggestions for bath-

"R—" Closet Combinations

"Are Fit For Any Bathroom"

Their quiet action practically silences the rush—swish—hiss and gurgle of the flushing operation. Why install a noisy closet?

Yes, we sell everything to plumb a house from cellar to garret — Bath Tubs, Lavatories, Sinks, Galvanized Boilers, Malleable Fittings, Soil Pipe Fittings, Bibbs, Basin Cocks, Double Bath Cocks.

Repair Parts, Washers and Gaskets
Always in Stock.

McAVITY'S

Sample of one of the ads used on bathroom fixtures by T. McAvity & Sons, Ltd., St. John, N.B. Note that the silence of the closet combination is emphasized. Mention is made of the numerous other lines handled in the plumbing department. The window displays and the advertising are generally concentrated at one time upon a certain fixture.

rooms, is very valuable to all home builders. Mr. Clark informed SANI-

TARY ENGINEER that customers are delighted with the opportunity of seeing a bathroom all fitted up, just as it will appear in the home, and in many instances customers follow out the plans and layout of the model bathrooms displayed. Mr. Clark also believes that to get the best results from the sale of bathroom fittings they should be handled in an exclusive department. By doing this, the samples can be kept free from dirt and dust, and spotlessly clean. He is a firm believer in absolute cleanliness so far as bathroom fittings are concerned, and the appearance of his department carries out his convictions, for no home could keep its bathroom in a more cleanly condition than that of the McAvity plumbing department.

Window Displays.

Special window displays are frequently made, and in every instance the display features a complete bathroom. This method of display is found to be more effective than a window crowded with a large assortment of stock. Special care and attention is always devoted to these window displays, and some very beautiful trims have been made, bringing forth many remarks of admiration from customers. Fred S. Stewart, the company's advertising manager, whenever possible, endeavors to regulate and write his copy to conform with the window displays, and when an advertisement of bathroom fixtures appears in the local papers, patrons of the store are always met at the windows with a display of the goods they have been reading about in the morning or evening paper.

Demonstrate Unvented Plumbing Installation

Alberta Convention of S. & H. Engineers Applies to Provincial Health Department to Instal Job for Experimental Purposes—Inconsistencies in Plumbing By-law to be Protested—An Aerobic Tank System Practicable if Installed Close to the Building

A BRIEF report of the convention of the Alberta Association of Sanitary and Heating Engineers appeared in the March 15th issue of Sanitary Engineer, the convention having just been concluded as that issue was going to press. Further details in connection with that convention have since been received and are outlined herein.

In addition to a representative gathering of delegates from the province, there were also in attendance a number of representatives of the wholesale firms. The Saskatchewan Association sent their new president, C. A. Green, who gave to the members the benefit of the deliberations at their recent convention, as outlined in the March 15th issue of Sanitary Engineer.

The features of the first day were the lectures by E. J. Young and Jas. Marr, Sr., of Calgary. Mr. Young gave a very

interesting lecture outlined by the National Trade Extension Bureau and Mr. Marr demonstrated by a miniature system in glass an unvented plumbing installation, using a special fitting designed by himself. This demonstration created considerable comment and resulted in a resolution being passed to apply to the Provincial Health Department for permission to install a job for experimental purposes to ascertain the results in actual working conditions.

The discussion with the supply men brought out some features wherein the Plumbing By-law recently passed by the Legislature was not consistent and the society will endeavor to have these rectified.

The lectures of the second day were also of great interest to the trade. The one given by William Parker and E. J. Sehl, of Lethbridge, on "Bookkeeping

Forms" gave valuable data for the members to remodel their method of keeping accounts and contract records. "Septic Tanks and Construction of Disposal Beds," written by S. Jennings, of Edmonton, and read by Mr. Kelcher, of Edmonton, was exceptionally well received and brought out the story of many varied experiences. Mr. Green gave the conclusions arrived at in their experience in Saskatchewan and this was that the anaerobic tank system was quite practicable if installed close to the building. The one advocated by Mr. Jennings and approved by the Alberta Department of Health is the aerobic tank with which it is claimed that the effluent can be discharged into any slough or stream. Exception was taken to this, as it was contended that this effluent was still poison.

The formation of an inter-provincial

Aerobic Sewage Disposal

Climatic Conditions an Important Element—Aerobic Systems Prove Distinct Success—Method of Introducing Air Into This System—Rapid Decomposition in Aerobic Receiver

Address by S. Jennings, Edmonton, Alta., before convention of the Alberta Association Sanitary and Heating Engineers

THE disposal of sewage from public buildings, institutions and homes in places where city utilities do not exist, has become a large and important branch of sanitary engineering. The necessity for sewage treatment is rapidly increasing, and legislation has been passed in several provinces compelling proper methods.

The design of sewage disposal systems requires experience and study on the part of the sanitary engineer; each system is different, and difficulties present themselves, calling for special attention in order to obtain the best and most economical result.

Climatic conditions enter into calculations to a large degree when considering the question of sewage disposal, and a system well adapted for a temperate zone would be a failure if used in a climate such as we are accustomed to. It is with this hard climate that we have to deal, and these notes are applicable in so far that they refer mainly to Alberta. I will not say that the same method would not be successful elsewhere, but I believe a lighter system is used to very good purpose in other provinces.

To Overcome Freezing of Septic Tank.

The aerobic sewage disposal system, as its name implies, is a system featuring air, and depends for its successful rendering upon introducing air into the system. There are two kinds of bacteria with which we deal in connection with sewage, and they are known as anaerobes and aerobes; the former work in the absence of light and air, and the latter the reverse. To accommodate anaerobic bacteria, the septic tank system was devised, with which, no doubt, you are all familiar, and aware that, to ensure operation successfully, it is imperative that the field tile be laid at a depth not greater than 18 inches below the surface of the ground. This is contended to be the weak part of the system, and experience has proved, despite all theoretical ethics to the contrary, that the system will freeze in a hard winter, and to overcome this freezing, the aerobic system has been devised which, under any ordinary conditions, is freeze proof as well as fool proof. In consultation with R. B. Owens, B.A., Government sanitary engineer, the aerobic sewage system was instituted, and it has proved a distinct success. No complaint of any description has been received as to its working. Several are in use, the Provincial Government hav-

ing had them installed for schools at Gleichen, Raymond, Youngstown and Vermilion, each installation having a capacity of nearly 4,000 gallons per day; also several private owners have had aerobic systems installed, and are perfectly satisfied as to their usefulness and reliability.

Construction.

As already stated, the aerobic system depends solely upon aerobes to do the work, and to accommodate them a concrete tank or receiver is built, the size of which is determined by the number of persons using the system and the amount of sewage to be disposed of. A general survey of the configuration of the ground is taken, and a site chosen; the receiver is then built, having a semi-dividing partition at the end containing the syphon. The receiver is of a size of sufficient capacity to hold from 24 to 36 hours' discharge from the building being served. As the sewage enters the receiver it falls on to a series of baffle floors, which are staged in the receiver one above the other to a height of within two inches of the water line which operates the syphon, these baffle floors having perforations equal to about 25% of their area, and laid with the perforations staggered in conformity. The purpose of these floors, which are of wood and of which there are generally four, is to receive the crude sewage and retain it for the aerobes to attack and break up, and as it falls to the immediate baffle floor below, so it becomes more condensed and is ultimately siphoned into the disposal field; these baffle floors soon become coated with a jelly-like coating which is simply an adhesive film of millions of aerobes eagerly waiting to devour the raw sewage as it enters the receiver. These aerobes are short lived and have life for 24 hours, but as soon as they die off, which they do in the form of gases, another generation takes their place, and the operation continues merrily on. The introduction of chemicals is very harmful to these aerobes, and the too frequent use of lyes and such-like should be discouraged from being poured into the system.

Introducing Air.

The method of introducing air into the system, which is so vital for these aerobes to work, is brought about by continuing the end of the trunk line of the disposal field up to the surface of the ground, and by means of by-passing the syphon the air is drawn through

the disposal field, thence through the receiver by the difference in height and temperature between the soil stack in the building and the pipes underground. This also ventilates the system and disposes of the accumulated gases given off by the dying aerobes. The disposal field should be large enough to accommodate two discharges of the receiver and must be laid with very slight fall or nearly level from the syphon. This means that the depth of the disposal tile must vary with the slope of the ground, and as the syphon is placed at the lowest part of the receiver, it follows that the depth of discharge is below frost line, and therefore freeze proof.

Several experiments have been carried out to test the reliability of the aerobes working under conditions as enumerated, and amongst the many may be mentioned that a piece of cheese, always admitted to be a hard digestible quantity, was placed on the top baffle floor in an aerobic receiver, and within 30 hours it was taken out and found to be perfectly black and in a very advanced state of decomposition.

DEMONSTRATE UNVENTED PLUMBING INSTALLATION

Continued from page 28

association was brought before the meeting, with the result that a committee was appointed to consider and present for approval the objects and benefits to be obtained by such an organization.

Election of Officers

The election of officers resulted in the re-election of R. J. Priestly, of Calgary, president; F. Hick, of Lethbridge, vice-president; E. P. Fletcher, Calgary, secretary-treasurer.

H. C. Phelps, the retiring secretary-treasurer, was presented with an honorarium for his past services.

Throughout the whole convention the spirit of co-operation was manifest; and it was conceded that the relations of all connected with the trade had improved the last year, due to a better understanding of conditions governing each.

The only rivalry was a challenge on the part of the jobbers to a curling match, issued to the veteran James Marr, and they proceeded to demonstrate that they were capable of slipping one over, in more ways than one, as they succeeded in winning out, although it was an exceedingly close and hard fought game.

The 1922 convention will be held in Calgary, which being a more central location, a much larger attendance is anticipated.

Hints on Seasonable Advertising

A NUMBER of the ads used in local newspapers by plumbing and heating engineers in various parts of Canada, dealing with plumbing, heating and tinsmithing, are shown herewith. These illustrations and the descriptive matter of other ads may be used by others as the basis for their own advertising. The generous use of illustrations is a feature of effective advertising on these subjects.

A number of suggestions for tinsmithing are made in the ad by J. McKinnon, Kamloops, B.C., as illustrated. This plan of making specific suggestions is a good one for the property-owner oftentimes neglects to look where trouble may be expected and the result is that he seldom finds it until the damage is irreparable. Special mention is made of copper bottoms for boilers, renewal of scale scoops, stove pipes, etc. A neat illustration is used to

We Repair Tinware

as well as make all kinds of tin and sheet metal work. If your boiler needs a new copper bottom, your scale scoop needs renewing, your stove pipes want replacing come right here where you can have exactly what you want done in the least time for the least money good work and good materials will permit.

catch the attention and it is always well to give the telephone number as shown.

* * * * *

SHOWERS

Making particular mention of showers as part of the bathroom equipment, the ad by D. N. Flander, Ingersoll, Ont., shows an illustration of the housewife proudly drawing attention to the shower installed in her home. Mention is made of the fact that without a shower bath one misses much of the pleasure of bathing. It is also well to mention the other point outlined, namely, inexpensiveness, lack of disturbance in the home and the satisfaction after use.

* * * * *

GOOD HEALTH

Under the heading "Good Health" the ad by Young Plumbing Co., Calgary, Alta., makes the statement that "there's nothing that costs so little that's worth so much." It continues by pointing out that good health will not be found in any house that is not fitted with modern sanitary bathroom, kitchen and laundry fixtures. An offer is extended to visit the showroom and utilize the expert advice provided.

* * * * *

That a job worth doing is worth the best possible efforts, no matter it be large or small, is the point made in

the ad by Henry E. White & Co., Brantford. This is somewhat of a general ad, driving home the fact that good attention will be given any work and that many years of experience will insure the work being done right.

Good Health!

There's Nothing That Costs So Little That's Worth So Much!

But you cannot be sure of good health in any house that is not fitted with modern sanitary bathroom, kitchen and laundry fixtures.

Our show room display and expert advice is at your service.

BUILDING A SKYLIGHT

An ad on tinsmithing, under the above heading, by R. Chestnut & Sons, Limited, Fredericton, N.B. (plumbing department), points out that a skylight of tin, galvanized iron, copper, zinc or other sheet metal is one of the firm's special jobs, in which great pride is taken. The fact that many satisfactory jobs have been done is pointed out in the statement: "If you could go up in an airplane and see the skylights on the roofs of this city you would see many of our make." Mention is also made of the fact that roofs, pipes, gutters, cornices, eaves, fronts, etc., are made to order.

* * * * *

MODERN PLUMBING

Making the point that housework is a pleasure if the house is equipped with a model kitchen and up-to-date plumbing, the ad by W. E. Butchart, Vulcan, Alta.,

WE WORK

On the principle that a job worth doing, whether large or small, is worthy of our best efforts. Your plumbing work in our hands, whatever the size or nature of the job, will receive the benefit of our long experience and thorough competence. We guarantee satisfaction, and the price will be right.

HENRY E. WHITE & Co
Plumbers and Electricians,
250 COLBORNE ST. - Phone Bell 534

shows an illustration of a kitchen and states that it is never any trouble to quote prices and give estimates.

* * * * *

"No plumbing job has us dismayed—
We've learned quite well the plumbing trade."

Commencing with this piece of poetry, an ad by John Lewis Co., Belleville, Ont., continues: "We'll get to your home in a hurry at the first signs of trouble. There's no

repair job too small to get our attention. We're the emergency plumbers—always ready to answer your call. We'll answer questions, too, if you seek our advice."

* * * * *

PUT US TO THE TEST

Under this heading an ad by Shannon the Plumber, Toronto, states: "Most plumbers do their work fairly well—many do their work very well, but Shannon plumbers do their work exceptionally well. Do it promptly and satisfactorily. If you are particular about the work you have, you owe it to yourself to put Shannon service to the test. And you may make the test as exacting as you will. Our men will measure up to the most critical test you can put them to."

* * * * *

BUILDING THIS SUMMER?

Under this head an ad by D. Howe, Ingersoll, Ont., states: "You doubtless know to what extent your home comfort depends on good serviceable plumbing. We specialize in this work and have done for many years. Be-

HAVE YOU A SHOWER

in your bathroom? If not you are missing a large part of the pleasure of bathing. Have us put one in for you. The expense will not be great, nor will there be any disturbance in your home. We'll do the work so quickly you'll hardly know we have been there. And we warrant you that once you use the new shower you wouldn't be willing to do any money

fore you let your contract come in and talk it over. We can save you money, yet give the best job—both count."

This ad, though run in small space, is effective through the use of bold type and the asking of a question which will catch the interest of those who are the best prospects for plumbing and heating work.

* * * * *

FRANCO VILLA

"The Mexican outlaw, while engaged in guerilla warfare in Mexico, had sent him from Chicago an enamelled bathtub constructed on wheels, which he had transported from place to place as his engagements required."

Opening with this piece of interesting information an ad on modern plumbing equipment, illustrating a bathtub, by T. J. Minnes & Co., Brantford, Ont., continues: "There is no occasion in Brantford for such an arrangement, as we can instal an up-to-date sanitary bath in your own home with brass, nickel-plated parts, supplied with hot and cold running water, which Villa didn't have." The ad concludes with an invitation to telephone for an estimate.

"Both the equipment we furnish and the manner of its installation will stand the most rigid inspection," says an ad by Port Colborne Supply Co., illustrating a bathroom outfit. It continues: "When we instal a bathroom outfit we instal it to give satisfaction in the future as well as in the present. By carefulness in regard to the details

TO DO YOUR OWN WORK
is a pleasure if your house is equipped with a model kitchen and

to fill any order, large or small, whether it be for new flues for the furnace in the cellar or a new roof or cornice for the top of the house. We will gladly furnish you with an estimate for any sheet metal work needed. YOU'LL find our figures very reasonable."

Sanitary Engineer

Plumber and Steamfitter of Canada

ESTABLISHED 1907

Member Audit Bureau of Circulations

PUBLISHED TWICE MONTHLY BY

The MacLean Publishing Company, Limited

Montreal

TORONTO, CANADA

Winnipeg

THE ANNUAL SPRING NUMBER

THE fifteenth annual Spring Number of *Sanitary Engineer* reaches the plumbing and heating trades of Canada at a time when the information contained herein will be of most use if put into practice. Much intelligent thought must be given to business these days in order that the maximum amount of business may be conducted with as low a ratio of costs as possible. In view of the frequency of price changes during recent months stocks held by jobbers and operators are light and buying is in restricted quantity. Already there are signs of a renewal of building activity in many parts of Canada and there are those who fear a sudden demand will result in a shortage of plumbing goods similar to that of 1919. The plumber must steer a middle course, taking all contingencies into consideration and endeavoring to put his business in such shape as will enable him to take advantage of all possible business and at the same time to protect himself against the fluctuations of the market.

This is not by any means an easy course to follow, and it is only by keeping a close watch on all developments and planning along logical lines that the difficulties which threaten may be passed safely. This is where the information contained in a trade newspaper like *Sanitary Engineer* can be of greatest help to its readers and this is a further argument why this information should be applied at every opportunity. There are many articles in this issue outlining data of value to every plumbing and heating operator and these should be carefully perused.

REVISING BASIS OF WAGES

AN important move in revising the basis of wages paid to journeymen by master plumbers is the action of the Master Plumbers' Association of Montreal, which after much study of the question has recommended a schedule to act as a guide in fixing wages. This schedule deals with practically all the work handled by a plumbing shop and sets aside a certain time as sufficient to complete the various stages of the work. Thus there will be a general application of certain standards of wages paid according to work done.

It is apparent that one of the chief advantages of the plan will be the greater fairness in paying a man according to the work he accomplishes rather than on the basis of a set wage per hour. It is evident that the journeymen realize that the plan works to the advantage

of the most efficient operators because they heartily endorsed the schedule. The few who benefited under the former plan at the expense of the conscientious and energetic operators will be encouraged to put forth better efforts and so the plan is expected to help all concerned. It will also help to remove the too general opinion among those who require the services of the plumber that he is an inefficient worker whose charges are all out of proportion to his ability.

THE BUSINESS OUTLOOK

THERE is no gainsaying the fact that business during the first three months of this year in plumbing and heating supplies, particularly in so far as brass goods are concerned, has not come up to the expectations of at least some of the manufacturers. This fact is plainly stated in the opinions expressed elsewhere in this issue. On the other hand, one firm states that business during that period is in excess of that of the same period in the year 1919, at which time conditions prevailing were similar to those now evident. Plumbers' and jobbers' stocks are light at the present time and the sentiment has been expressed that a shortage of goods similar to that experienced later in 1919 will be felt here if the expected revival of business materializes.

Little hope of reduction in prices on brass goods is held out by manufacturers, who point out that during 1920 brass manufacturers did not raise prices as did those manufacturing iron goods for use in the plumbing and heating trade. The result was that the latter manufacturers were able to give greater reductions in proportion than the brass manufacturers.

ELIMINATE FALSE PROPAGANDA

THERE are many who will agree with the opinion expressed by one manufacturer that it is time to eliminate the false propaganda and "camouflage" and look the facts straight in the face. It is well to have confidence in the future and to be optimistic, but not to such an extent that the true facts of the matter are belocuded. However, even the majority of those manufacturers whose opinions are quoted herewith believe that business will very shortly become active and that a good year will be rounded out. There is no question that a resumption of building on a larger scale than for some years has now been commenced and as these new buildings progress they will require considerable plumbing and heating goods. Meanwhile, special efforts should be put forth by the plumbing and heating engineer to develop trade in specialties and in renewal installations in existing buildings. After all, the true test of the ability of the plumbing and heating engineer to conduct a business is the success with which he can develop new fields of business to keep the wheels moving until a return to normal times, when the regular business and the new business combined will provide an adequate reward for the efforts expended.

LIFEBOAT DRAWING

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri

THE making of row-boats by the layman mechanic is not easy. First there is the design, the size in length, width, and depth, and then there is the matter of developing the layout into patterns that will fit.

In our annexed drawing we have a full side elevation or sheer view. Observe we have the frame lines and at the bow and stern at frames 1/2 and 9 1/2 an extra frame is set. In row boats these frames take on the form of channel bars of about 1 1/2 to 2 by 5/8 flanges. The keel and bow post as well as stern post are of wood about 2 x 4 inches. The metal is put on in strakes, with flanges turned out against the wood and nailed, placing the nails staggered. A layer of canvas well soaked in red lead is laid between the wood and metal.

The galvanized iron varies from 20 gauge to 16 gauge, and the strakes are about 4 to 7 inches wide, according to the size of boat, and curvatures required in it. From the midway section through boat we see how the boards are placed

in the bottom. These are bolted to the rib bars, and while inspecting the top plan with the other views, we see the air tanks which are placed beneath the seats. These tanks are made in sections of about three feet long and shaped as shown in the plan. Their purpose is, if the boat should be filled with water and even though 18 or 20 people were inside, the boat would not sink, and would maintain itself sufficiently near the surface to enable rescue.

Ordinarily the outlines in the fore half of end view would be used as profiles for ribs in the front half of boat, and the other half, for the back half. Here we have omitted the elevation level lines and plan lines to better show other features of boat construction. For the layman mechanic who only makes one of these, it is just as well to construct a skeleton frame, placing the rib bars in place, and temporarily clamping them to wooden strips. Over these wood batten- ing strips, strips of building paper about five to six inches wide are laid and

tacked in place. This enables the workman to see the curvature and the proper width of strakes required, to prevent special shaping of the metal. Observe if strakes are made too large, buckles will form, and this must be overcome by making the strakes narrow enough so it will lay tangent to form.

The paper strips are lapped about an inch or one and a quarter inches, using two rows of rivets two inches apart and staggering them for the metal. In this way the paper templets for only one-half of the boat are lifted. Afterwards metal patterns are marked from the paper templets and lap edges marked and rivet holes punched. Great care must be taken while assembling, because the patterns are very liable to shift during the riveting process.

Workmen more skilled in pattern drafting could lay out each individual strake by triangulation. This is a simple process, as our elevation lines will give us the rise, and the plan the off-

One Bathtub Per Are you ready to sell

X. H. Goodenough, Chief Engineer of the State of Massachusetts Department of Health, announces that statistics of that state showed one bathtub for every 40.2 persons in the city of Boston in the year 1880. On March 12, 1921, he states that tubs have increased in number until there is now one tub for every 4.4 persons.

If this ratio of increase should be maintained there would be one bathtub for each person inside of five years.

Person By 1926 and install your share?

This indicates that the Sanitary Engineers of Boston have been earnestly striving since 1880 for sufficient bathtub installations. No doubt it has taken much persistent effort, good salesmanship, and attractive displays, but those Sanitary Engineers are now reaping their reward in many profitable sales and installations of bathtubs, and, probably, the usual accompanying plumbing enamelware. By the time the definite goal of a tub for every person is reached, a plentiful business in replacements will have been established.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

Plan Grit Chamber FIG. 36.

Article No. 28 of the Series—Illustration No. 36

(Continued from March 1 issue)

THE separation of the deposited suspended matter from the clarified tank effluent by the installing of two tanks constructed in one structure, produces a far better tank effluent, which is more readily oxidized by the final filtration area, also the anaerobic action of decomposing and liquifying the deposited sludge is much more easily and successfully accomplished as the velocity of the sewage is kept in the top story chamber, thus producing no disturbance except continued sludge settlement in the bottom story chamber.

Ample ventilation space should be taken care of in the bottom story tank so that the gases given off can find a free access to the air. This is accomplished by building one tank inside the other, connecting same for constructional reasons at the two ends, and leaving ample space between the sides of the outer and inside tank walls as shown in the illustration.

The storage capacity of the sludge digestion chamber should be designed for six months so that the tank only requires emptying twice in the year and this is accomplished by keeping the sludge outlet pipe six feet below the water level, with valve connections, and the head of the water in the tank forces the sludge up the pipe into the main delivery sludge pipe to the sludge beds (which should be laid at a grade of not less than 1 in 30), which discharge into earthen constructed beds well under-drained.

The sludge through the six months' storage has passed through the entire state of putrefaction and is free from all smell and on drying out (in 2 or 3 days according to the atmosphere) becomes a dry brown mould which has no manurial benefit whatever and can be utilized with perfect safety for filling in purposes. The sludge beds should be provided with valves and effluent drains as

shown in the above illustration (No. 36).

In order to design the correct size for the sludge digestion chamber it is always advisable, wherever possible, to obtain same from some other similar installation for accurate and reliable information, but the following formula, compiled from actual experience, gives approximate data sufficient for working purposes.

For separate sewage

$$C = 5.25 \frac{D V}{v} \quad \text{---} \quad 5.25 P D$$

For combined sewage

$$C = 10.5 \frac{D V}{v} \quad \text{---} \quad 10.5 P D$$

V—Flow of sewage in falls per capita per day; V—total daily flow from sewage; P—population served and expressed in thousands; D—days retention of

Heating and Ventilating

Combination Heating Systems

Fifth article of an important series, written exclusively for Sanitary Engineer
by N. A. Kearns

(Continued from March 1 issue.)

BEFORE we take up the subject of a complete installation of a combination warm-air and hot-water heating system, we wish to direct the reader's attention to some details of the hot-water part of the heating apparatus.

The scope of this article does not permit much consideration of the many details which go to make up a hot-water heating plant. There are such details as the length and height of circuits; the heating effect of radiators with different systems of piping; and also many other details, which are to be taken up later. For the time being we will confine our attention to those details which must be considered in connection with the combination system of heating.

Combination Boilers.

Combination boilers are, in general, divided into two main types, one of which is that when the heating rings are set in the combustion chamber only. The other type is built so that the lower ring of the boiler forms part of the fire pot.

The type first referred to is similar to that illustrated in the drawing which was presented with the first article of this series. In this type of heater, the fluctuations of the fire affect the heating surface much more than they do when the lower ring is a part of the fire pot. However, some types of boilers, when the fire pot ring is used, have much of their heating efficiency impaired because of an accumulation of ashes and dead coal, and it is for this reason that the heating trade usually prefers the "high-up" type.

Combination boilers of varying capacities are made, as a rule, by the manufacturers of warm air furnaces, and in designs suitable to the varying types of furnaces.

The capacities of these boilers vary with their diameters and numbers of sections. It is only by the judicious fitting of a suitable boiler to the furnace used that a proper balancing of the warm-air and hot-water system may be obtained.

The lower sections of any type of com-

bination boiler are usually of sufficient capacity to supply all of the direct radiation required when used in connection with a warm-air heating plant; still, at times, it may be necessary to provide heat by direct radiation in almost as great a proportion as by warm-air. In such a case it will be necessary to add sections to the combination boiler until the combination chamber may be almost entirely filled by the combination boiler.

Reduced Efficiency.

In providing for direct radiation, it should be remembered that the heating surfaces of the combination boiler reduce the efficiency of the warm-air part of the apparatus in direct proportion to the amount of heating effected by the direct radiation. While this is generally understood by the men in the trade, it is not always clear to those outside.

A case in point is that when some householder will ask a heating engineer to instal a combination boiler in an existing hot-air furnace, so that certain new rooms may be heated by direct radiation. Although the furnace may be rated at 16,000 cubic feet only, the owner often thinks that he can add another 16,000 cubic feet to his residence and still heat it with the same furnace. It is at times difficult to convince the owner that what he needs is a furnace with a capacity of 32,000 cubic feet before he can consider the installation of any direct radiation.

Combination boilers retard the fire by checking the draft. It is, therefore, necessary to see that the smoke pipe is connected with a flue much better than that which might serve for a warm-air furnace alone.

It is true that all flues should be as good as they may be built; nevertheless, it is a fact that a flue which might give reasonable service when connected with a stove or a warm-air furnace may prove to be wholly inadequate when connected to a hot-water boiler.

The cooling surfaces of the sections of a boiler cool the gases of combustion. With the cooling there is a falling off in the velocity of the gas escape to the flue. The cooler flue gases may prove

that there is not much heat escaping by way of the flue, and, on the other hand, the cooler gases may prove that the obstruction of the sections is dampening the fire below the proper rate of combustion. Therefore, heating engineers should see to it that while the heating sections of the boiler are arranged to extract as much of the heat as may be possible, these same sections will not too greatly retard the free circulation of the hot gases.

It is generally considered that one square foot of heating surface exposed to the fire will supply heat for 48 square feet of direct hot-water radiation.

The Radiators

In some cases the warm-air part of the system is used to heat only those rooms which are close to the furnace: the rooms farther away being heated entirely by direct radiation. Very often this is the only practicable arrangement.

The writer has found the best arrangement to be that whereby some effort is made to heat the entire building by warm air: the direct radiators being installed in the way of auxiliary heaters. In this system the radiators are installed in such locations as may be unfavorable to the free circulation. By this arrangement a much better balancing effect results than that which might be obtained when the two parts of the system are installed as separate and distinct units.

One of the greatest difficulties encountered in connection with the installation of combination systems is that of lack of balance. This is very noticeable when the furnace is very large in proportion to the combination boiler installed. In a case of this kind the water always boils out of the expansion tank when the furnace is being run to its warm-air capacity. Again, on the other hand, we may find a furnace far too small for the combination boiler installed; then we find that, no matter how hard the furnace is run, the water in the radiators will never get hot.

One of the simple ways of maintaining a balance is to proportion the radiating surface to the combination boiler and furnace, and then to set one or more additional radiators, which may be operated at such times when it is necessary to run the warm-air apparatus to its full capacity. During mild weather, the additional radiating surface is to be valved off.

QUESTIONS AND ANSWERS

Sanitary Engineer:

Would you kindly give me some information on cesspools. I am living in a country village thirteen miles out of Montreal. At present we have the well water, but the coming summer we are getting the water mains. There are no sewers, only a few cesspools, which seem of poor construction. Could you give me a sketch of a cesspool, giving the dimensions and details of construction, also how far it should be away from the house. I am working in the city and have not had much experience on cesspools. —N. Rudge, Valois, Quebec.

Cesspools should be so situated that the liquid leaching from them will not contaminate the water supply nor enter the house cellar. They must not be made air tight; they should be vented by way of a pipe which discharges at some safe distance from the house, say, 60 feet.

For some time after leaching cesspools are first built they will effect some filtration and purification of the house waste; but after a time, when the pores of the soil become clogged and saturated with sewage, very little filtration may be expected. With the clogging of the soil, decomposition will set in, thus gases will

leaching cesspool already described, except that the walls and floors of the tight type are built of water-proof concrete.

When the tight cesspool becomes filled with liquid, the liquid must be pumped into barrels, dumped on the land and plowed under.

A tight cesspool must be built with great care so that it will be perfectly water-tight. It should be located as far as may be possible from any dwelling and should be so built that it will be easily emptied and disinfected. Tight cesspools must be disinfected every time they are emptied.

The accompanying drawing of a tight cesspool shows about as good a type as may be devised. This cesspool consists of two compartments, one of which is a

LEACHING CESSPOOL

TIGHT CESSPOOL

Answer

The accompanying drawings illustrate two different types of cesspools; one of which is that known as the "leaching" cesspool, the other is that of the "tight" type.

The leaching cesspool is suitable only when it may be built in loose, sandy soil. This type of pool is built of stone without mortar in the joints. The stone walls extend down at least one foot into the gravel. The upper part of the walls may be built of brick or of concrete. The top is covered over by a concrete slab. A 20-inch glazed tile pipe serves for a manhole, which should be fitted with a perforated cast-iron cover. The perforations in the cover allow air to enter the tank.

The inlet pipe must extend far enough into the tank so that falling sewage may not close the crevices between the stones.

The running trap prevents gases from the cesspool entering the house drain. The breather serves to supply the house drainage system with fresh air. The running trap should have a clean out pipe fitted with a cap as shown on the drawings.

be generated and given off at the surface of the soil.

The use of leaching cesspools involves the danger of the sewage finding a passage by way of some subterranean channel to the source of drinking water. However, as we understand from your letter, a new system of water mains will bring the water from some considerable distance, so in the case of the particular installation referred to in your letter there will be no danger on this count.

The required size for a leaching cesspool varies with the condition of the ground wherein it is placed. An average size for the ordinary household is four feet square and five feet deep. These measurements refer only to that part of the cesspool built of open-jointed stonework.

Tight Cesspools

Where clayey soil is encountered or when it is not desired that the liquid from the cesspool should contaminate the surrounding earth, it is necessary to use a cesspool of the "tight" type.

The simplest form of tight cesspool is similar in construction to that of the

separation chamber, the other a liquid chamber.

The walls and floors of both chambers are built of waterproof concrete. The two chambers are connected by a 4-inch cast-iron overflow pipe.

It will be noted that the overflow pipe turns down into the liquid in the separation chamber. This is so that scum and floating solids may not find their way into the overflow pipe.

The vent pipe is connected to the overflow pipe and in this way vents both tanks. This vent pipe should be carried under the ground to some remote point, and there vented to the atmosphere.

With this type of cesspool, the separation of the solids and liquids facilitates the disposal of both. The liquid may be pumped out and used to irrigate the land. The solid matter may be removed and plowed into the ground as a fertilizer.

In size the intercepting chamber for the ordinary household should be about 4 feet square and 5 feet deep from the point of overflow. The secondary, or liquid chamber, should be about 6 feet

Spring Housecleaning the Plumbing Business

Elimination of Plumbers' Showrooms Will in Ten Years Turn Plumbing Business Over to General Contractors—Records Must Show Figure Facts.

Written exclusively for Sanitary Engineer, by KENNETH B. ALLISON

IN the spring-time youths' thoughts turn to love whilst more mature folks think of housecleaning.

Recently hereabouts the magnetic words, "Trade Extension," have caused one, on some days, to get all "het up" with enthusiasm and at other times to create despair in our minds because this same "Trade Extension" had not got started on its way towards rejuvenating or housecleaning the dark corners out of our business.

Window Trim

Speaking to those whose position of affluence has made them the proprietor of a plumbing and heating store on one of the main streets of any of our wide-awake cities in this country, might we suggest at this time something in the line of window trim.

If you can secure some of the latest patterns of drawn lead traps, place some half dozen of them proportionately across the floor of your show window. Next, use a length of lead waste pipe, but to give added effect in place of just laying same in the window, try to form one of those archaic Grecian curves amongst the traps. So as to familiarize the public eye with the great variety of

plete, and if the elements have not favored you be sure and sweep all the dust from the sidewalk against the window so as to secure an opaque effect, which having been done you can stand in your store with your thumbs in the arm-holes of your vest and wait for business that **WILL NOT COME.**

In a round-about way in the above paragraph I have tried to depict the show window of the average operating master plumber—the man who having a most valuable asset to his business in that show window is so careless as to allow it to present a most disagreeable picture to the passerby. The first essential to any well-dressed window must be cleanliness, because a window can only be well-dressed when the impression it creates is an agreeable one, and therefore dirty windows and floor with dust-covered examples of ancient plumbing are certainly not conducive to causing an agreeable thought in the minds of the public towards the proprietor as being an operator in modern sanitation. Whatever your thoughts are as to the class of goods you wish to display it is absolutely fixed that you cannot produce results on anything but attractiveness and cleanliness.

making this display any less attractive or cleanly than the show window of the finest departmental store.

Perhaps right here there will be any number of operators willing to argue against the necessity of a showroom or store for the proper conducting of a plumbing and heating business. There is much which can be said on both sides, as the man who with office and stock-room only, and having about him an

organization which creates business by personal contact and ambitious follow-up of inquiries, can conduct his business on a lower percentage of overhead than the man who has added a showroom, and so therefore a showroom operator must work towards the end of making the showroom create an additional volume of business for him by means of which he can lower his percentage of overhead. It is not too far back to remember some of the operators who in years gone by conducted quite elaborate showrooms and have since discontinued this feature. This fact furnishes an example that is stronger than theory as to the practicability of conducting a successful business without the aid of a showroom. On the other hand, if we were to consider this business as having no showroom operators in it, it is obvious that the volume of business done by the industry would be lessened because advertising, no matter how well-planned, misses one of the best assets, namely, personal or direct contact, when it does not link up with window display, as a finality in the culmination of a sale. To me it is an absolutely settled fact that this industry never having been advertisers, in the publication sense of the word, and depending solely on showrooms for their publicity have in recent years by their partial elimination of them considerably lowered their position by volume as a predominating industry. Let there be no showrooms whatsoever for the oper-

unthought-of items in a plumbing job, arrange quite a fair assortment of taps, valves and floor plates. A thirty-gallon boiler, a gas heater and other large-sized items tend to proportion your display, after which secure the largest fern from the house and centre it in the window. Your show window is now com-

The Showroom

Let us now look at your showroom. Have you made a display which shows variety and is not too crowded, or have you cluttered up the space with all the material you did not have another place for? You cannot create prospects by displaying out-of-date goods, nor by

ating master plumber and in ten years you will find the vast bulk of our business conducted by general contractors, who, regardless of what may be said in their favor, absolutely disregard the responsibility in sanitation which is demanded of the operator of to-day.

Housecleaning the Books

Coming back to our main thought, namely, housecleaning, it would be well for an operator to do some of this amongst his books or methods of keeping business records. There are two prime factors to the conducting of any successful business, one being the mechanical knowledge and the other the business knowledge, and these two prime factors must be in evidence before a

broadening policy for bigger business is ever even thought of. Have your records show that you know all the figure facts about your business. If to-day you will spend some money in this regard you will later on find it absolutely the best investment you have made.

So with your manner of keeping stock. There are any number of operators' shops which I have seen that are a disgrace to any industry. If you could realize the waste in loss of time to workmen caused by attempting to find fittings and clean stock amongst old junk, you would right now, in place of hollering about slack times, spend a few dollars for lumber and build proper fitting and stock bins so as to be prepared to save time and do more business when the business is there to be done. If more operators would properly lay out their stock they would be at this time of the year buying something for their needs this coming summer and would thereby be relieving the stock shortage which will probably occur this summer due to our present short-sighted, careless ways. Whitewash the walls, sweep the floors, sort out and put away the stock and have your place so that you do not have to be apologizing for its appearance.

The Personal Equation

Then there is the personal equation, or one's mental attitude, and in dealing with the housecleaning of this angle of it one does of necessity talk at least partially in the abstract. We do a certain portion of our business by direct sales, in which case we change an unknown buying factor into a tangible sale

through our appeal to the five senses, create interest and desire, and by making such appeals as we believe will have the most effect on the buyer in our favor, we close the sale. We may also receive business by indirect means through the agency of previous confidence created or good service rendered either to the buyer or someone known to the buyer. We may also create business through a combination of both of the foregoing.

Let it be known here that the writer is not attempting to teach salesmanship in comparison with those who have studied it to its last analysis as a science, but I do believe that salesmanship is a part of our fundamental education which we have whether we will it or not.

The child who makes more noise than other children accomplishes what it strives to do when it receives the attention of its elders. The lad who gets the job as office boy from a field of some

forty applicants must have conscientiously or unconscientiously done something to get the business. Call it personality, aggressiveness, or what you will, it is certainly part and parcel of salesmanship. So, therefore, if we believe that salesmanship, whether good or bad, is a part of our being, we ought not to be afraid to tackle the job of improving it, and it is essential that we do tackle it because no matter how well we may be able to produce from a mechanical standpoint, we must do a little shouting if we want to put our production efforts across and realize tangible results.

Salesmanship embodies the attributes of other efforts and we must school ourselves to those fundamentals in proper progression to procure the final answer. The failures in the result are due to some weakness in that line of progression and so we must daily take ourselves

Continued on page 56

NEW PLUMBING GOODS

THE "NEW KING" BOILER

A new hot water boiler has been placed on the market by Steel and Radiation, Ltd., Toronto, Ont., and is called the "New King." This boiler is said to have many new features and improvements not found in the older type. A positive circulation, with larger combustion chamber, correctly proportioned waterways, and an improved shaking apparatus have been embodied in this boiler, and have added appreciably, it is claimed, to its efficiency. This boiler has been designed for the heating of residences, apartments, banks, etc., and a number have already been installed and are giving satisfaction. Another feature claimed for it is the ease in assembling and time saved in installing. Particulars can be obtained from the company at 80 Adelaide St. W., Toronto, Ont.

THE "BREEZO" FAN

For Improving Hot Air Furnaces

The most common complaint regarding hot air heating is the faulty distribution of the heat to different rooms. A large volume of hot air will flow from the register in one room, while in another room the hot air flue may persistently act as a downcast, the air from the room flowing into the register instead of hot air flowing out. The reason for this behavior is easily seen when the construction of the furnace and the various heating flues is examined. It will usually be found that the cold air duct has a cross-section perhaps one-fourth that of the combined cross-sections of the hot-air

flues. The circulation in a hot-air heating system is produced, of course, by the tendency of the column of heated air in the hot air flues to rise. This causes the air pressure in the furnace casing or hot air chamber to fall slightly below the normal, and it is this suction that produces the inward flow from the cold air duct. This slight vacuum in the hot air chamber will often, when the furnace is first started and the flues are cold, draw cold air down one or more of the hot air flues. The more the flow of air to the furnace through the cold air duct is obstructed by inadequate size, the more certain and persistent will be the faulty distribution to the various rooms.

The "Breezo" fan has been designed to overcome the resistance to the flow of cold air to the furnace, and to insure uniform distribution to the different hot air flues. It operates on any lighting circuit, direct current 25 to 60 cycle alternating current, and gives six different speeds. It can be regulated to suit the temperature, and during mild weather it may not be necessary to operate the fan at all. The air is taken from the cellar and blown through the furnace, where it is heated up and distributed to every room in the house.

The register located centrally in the floor allows the cold air to be drawn off the floor line by means of the fan, back into the basement, where it is again heated and distributed. The "Breezo" fan is made in Canada by the Canadian Blower and Forge Co., Ltd., Kitchener, Ont. The necessary equipment is stated to be comparatively inexpensive and can be installed in most houses in less than a day's time.

Systematizing and Managing the Plumber's Office

Necessity of Safe Keeping of Records—Labor-Saving Methods—
Orderly Arrangement of Desk and Contents—Founded on Infor-
mation Secured by U. S. National Trade Extension Bureau

(Continued from March 1 issue)

ON the right-hand side we begin with Drawer No. 5. This should hold your Tickler File and other literature. Your Tickler File is a small box, large enough to hold a card 5 inches wide and 3 inches high. This box with 31 guide cards, one for each day of the month, and 12 more for each month of the year can be bought at your stationery store for a small amount. When used regularly and systematically it is a wonderful help. It relieves your mind of details, leaving it free to concentrate on the bigger things. To get the best results use it as follows:—

Using Tickler File

Carry in your pocket always a small scratch pad, no larger than 3 in. by 5 in. When you make an appointment for a certain day, jot it down on one of these sheets. Use a separate sheet for each different date. If you think of something you want to do on a certain date, jot it down. When you get back to the office get out your pad, tear off the sheets, and file them behind the guide corresponding to the date noted. Each morning take out the slips behind the card for that date, and you have before you the things to be attended on that day. Suppose you learn to-day that figures on the new office building to be erected must be in by the tenth. Make a note on your scratch pad to that effect, and when you get to the office file it behind the seventh. On the morning of the seventh it will automatically come to your attention without any effort on your part, and if you cannot attend to it on that day file it for the next day, and you can then forget it until tomorrow.

We know men who have a reputation with their wives for never forgetting birthdays, wedding anniversaries, etc., who keep it simply by having these dates always on file in their business tickler. When one anniversary passes the memo goes behind the month card, and later, on the first of the month, is filed for the proper date of that month.

Other valuable literature should always be kept together and looked over in your spare time. Very frequently a piece of literature does not interest you at the time you receive it. Reading it again you find it gives some information that exactly fits some problem you have on your mind. For instance, you may not be interested in some advertising article. Later on, you decide to do some advertising. In glancing back you find an article that gives you ideas on

what you have in mind. Then, too, frequent reading keeps up your interest in the betterment of your business.

In the back of your Daily Tickler File, mentioned previously, have a set of guide cards covering the various Departments of your business. Such as book-keeping, advertising, show-window, show-room, shop equipment, shop practice and various others that may occur to you. This same index can also be used for keeping track in the same way of articles in the trade papers.

Estimates

Drawer number 6 holds the folders covering jobs to be estimated upon. We cannot urge too strongly that a separate folder be used for each job. The smaller jobs can be kept in the envelope, using the folder for large ones. Put a partition across your drawer in the front, and leave a space of three or four inches where you can keep such small jobs as are being carried in envelopes. The folders can then lie flat in the back part of the drawer. Be very careful, as we said before, to keep the papers pertaining to each job in the proper folder. In this way they will not get mislaid, and when you get ready to do your figuring, you will have all the information available for that purpose. This drawer should not be a permanent file for estimates. All estimates and contracts should be kept in the safe after you have secured the contract.

Drawer number 7 should hold all of the suggestions that you get for advertising copy. By having a board or piece of cardboard nailed in the drawer on a slant, and coming within two or three inches of the front you will provide a space underneath, where your cuts can be kept. On top of the board in folders, put suggestions you receive in advertising. Sometimes in looking over your daily paper you will see some other merchants ad. on clothing, for example, that will make excellent copy for you with a little change. Later you can fit it to your business and bring results. Therefore save all ads. of this character, and when you get ready to do some advertising they will automatically come to your attention. Pay close attention to the national advertising campaigns being carried on by the large manufacturers in such papers as the Saturday Evening Post, Literary Digest, Collier's and other periodicals which have a large circulation. Clip them out and file them away. Sooner or later they will be useful. It will often be to your advantage to follow the appearance of such na-

tional advertising copy with your own copy, in your local paper. This will inform your local public that you can fill their needs for the article advertised, at a time most likely to get their attention.

Take care of all the advertising matter that is mailed you by manufacturers and supply houses, especially that which shows reproductions of cuts that they will send you for advertising purposes. All this material should not be put into one folder, however, where it is hard to locate, but should be divided according to the kind of fixture or to the firm who is sending it out. These folders can then be numbered and indexed in the back of the Tickler File as explained under Drawer number 5. Have a set of guide cards covering the various kinds of fixtures, and when you file away a piece of advertising matter note on the card behind the proper guide card the folder it is filed in. In this way when you decide to do some advertising in connection with lavatories, you simply turn to the Lavatory card in your "Tickler," and find, for instance, that in folder number 1 you have advertising suggestions regarding lavatories.

The top of your desk and the two slide boards can also be put to good use, other than originally intended for them. A glass top for your desk, about 20 x 30 inches, with a frame around it, can be bought at your stationer's or you can buy the molding at a planing mill and the piece of window glass and make one. Under this put your charts setting forth technical data. Take one of your plumbing and heating estimate sheets and enter opposite each of the items listed therein the selling price of a standard fixture, using the 100 per cent. list price or some other code figures. Place these also under your glass top, and when figuring a job or talking to a customer you have before you the price to be used. In doing this you always have this information right before you; the charts are kept free from dust and do not become wrinkled or marked up.

Pull out the left-hand slide and paste on it the prices and data as to pipe sizes, etc. On the right-hand side paste a chart showing how to figure profit and overhead.

Photos of Jobs Done

On top of your desk, during the day, there should be a ring binder containing photographs of various jobs that you have done. This should always be open, so that whenever a prospective customer

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

TO INSTAL LAVATORIES

Galt, Ont.—In connection with alterations to the city hall it has been decided to instal modern lavatories for both men and women.

EASTER PLUMBING DECORATIONS

Ross Belyea, 1375 Bathurst Street, Toronto, who recently branched out from the firm of Belyea Bros., had a very appropriate window dressed for the Easter season. The display was based on some ideas given by the Trade Extension Bureau. In one window was a pedestal lavatory and in the other was an apron sink. Both were unit displays with appropriate Easter decorations in each. These decorations consisted of showcards cut to the shape of Easter eggs and decorative paper of various colors forming a base which from a distance gave a pleasing and seasonable appearance.

MOOSE JAW WATERWORKS

Moose Jaw, Sask.—The report of the waterworks department for the year 1920 is now available and the result of the operations for the year show a deficit of \$20,609.47 as compared with an estimated deficit of \$19,280. The operating expenditure for the year was \$87,435.56. The interest and sinking fund charges amounted to \$83,250.36 or a total expenditure of \$170,685.92. The revenue for the year was \$150,076.45.

The total number of "live" services as at the first of the year was 2,281, and the number at the 31st December last was 2,410, an increase during the year of 129 consumers. The total quantity of water supplied to the city was 329,907,000 gallons as compared with 306,965,000 gallons for the year 1919.

HAMILTON OPPOSES LEGISLATION

Hamilton.—Inclining to the belief that an effort was being made to enact legislation without the matter first being given due publicity, telegrams were sent out by the Board of Control to all the larger centres of the province, calling on them to protest against a proposed amendment to the Public Health Act, which W. A. Crockett, M.P.P. for South Wentworth, is said to have introduced in the Ontario Legislature, and which, if it passes, will compel every city or town that has a sewage disposal plant

or waterworks system to furnish water to outlying districts.

WESTERN ONTARIO NEWS

Thomas Janes, 646 Emery St., London, Ont., wants prices on heating, plumbing and electrical work in connection with new \$5,000 residence to be erected shortly.

George R. Wood has opened a tin-smithing and plumbing repair shop on Water St., St. Marys.

Steadman Bros., of Petrolea, Ont., want prices at once on heating, plumbing and electrical work in connection with new \$5,500 bungalow to be erected.

Burt Ford, of Blenheim, Ont., is preparing plans for new \$5,000 bungalow and wants prices on heating and plumbing.

L. G. Bridgeman, Bank of Commerce Building, London, Ont., wants prices at once on hot water heating system in connection with remodelling of building for offices.

Noble and Rich, of London, Ont., are erecting a new \$5,000 dwelling in South London.

Architects Watt and Blackwell, Bank of Toronto Building, London, are preparing plans for a new wing to the Chatham General Hospital to cost \$100,000.

Owen Wright, Sombra, Ont., is preparing plans for a new \$5,000 bungalow and is interested immediately in prices of heating and plumbing.

Plans will be prepared shortly for a new public library at Tilbury, Ont., to cost \$15,000.

J. W. Oram, 671 Elias St., London, Ont., wants prices on hot air heating, plumbing and electrical work for new \$5,000 residence.

W. J. Lashbrook, 293 Queen's avenue, London, Ont., has purchased the Belvedere Hotel and is preparing plans for a 100-room addition. Prices wanted on heating, plumbing and electrical equipment.

Richard Welsh, of Exeter, Ont., plans to erect new bungalow to cost \$5,500 and wants prices on plumbing, heating and electrical equipment.

G. Lewis, of Clifford, Ont., will completely remodel dwelling and instal new plumbing and heating. Prices wanted.

Plans are being prepared at Goderich, Ont., for a new sewer on the Huron Road.

James F. Naylor, Essex, Ont., wants prices immediately on heating, plumbing and electrical work for new \$5,500 bungalow.

John Heath, Listowel, Ont., wants prices immediately on plumbing, heating and electrical work for two new residences.

M. F. Zurbrigg, Listowel, Ont., has commenced work on new \$6,000 residence and wants prices on heating and plumbing.

The Mason & Risch Piano Co., 248 Dundas St., London, Ont., Clifford Gray manager, is spending \$20,000 on alterations and extension and wants prices on hot air heating and electrical work.

The Maitland Golf Club, at Goderich, Ont., is preparing plans for new \$10,000 clubhouse and is interested in prices of heating, plumbing and electrical work.

S. J. Cann, Exeter, Ont., is preparing plans for new \$5,500 bungalow and is interested in prices of heating, plumbing and electrical equipment.

Plans are to be prepared immediately for new \$10,000 school for S. S. 18, Plympton township, Daniel McKinley, R. R. 5, Forest, secretary.

John Tait, Glencoe, Ont., wants prices on heating, plumbing and electrical work in connection with new residence to be built this spring.

Tenders will be received until April 4 by R. R. Brett, Essex, Ont., for laying new 4, 6 and 8-inch water mains and for installing all water services required during the year.

Doings in Ottawa and District

DAY CLASSES FOR PLUMBING INSTRUCTION.

SO successful have the Ottawa Technical Night School plumbing classes been during the last six months that there is a move on foot now to organize day classes. The night classes have been under the supervision of S. Daughtry, chief plumbing inspector of the city, who has had associated with him Charles Fever, a popular journeyman plumber, who has had charge of the junior classes. The winter course concluded on the 24th of March, when a demonstration was given of the work done during the six months, and it was a most creditable display.

The matter of establishing day classes is being championed by W. C. Nicol, principal of the school, who feels that it would be very much to the benefit of the master plumbers if they were to co-operate by agreeing to set aside a certain portion of each day for their apprentices, when they might attend the classes without suffering the loss of remuneration for the time thus given over to study. Mr. Nicol has interviewed several of the leading plumbers, and has met with considerable encouragement.

* * *

CITIES FURNISHING WATER TO SUBURBS.

Neither the city of Ottawa nor the Board of Trade seems to be particularly concerned about a vigorous protest sent out by the Hamilton Board of Trade in connection with a bill now before the Ontario Legislature which will have the effect of compelling Ontario cities to furnish water to suburban points. Controller J. P. Balharrie, in charge of the Ottawa water works, stated that he did not view the proposed bill with any alarm. He said Ottawa was already furnishing water to points outside the city and could continue to do so as long as the outside places paid for their supply.

The controller quoted the following conditions under which water was furnished to outside points: "The city installed the water system and the users paid seven per cent. of the cost of installation. In addition meters were installed and a charge of 16 cents per thousand gallons was imposed on the basis of meter consumption."

* * *

STORM DRAIN NEEDED.

Recent floods in the west end section of the city caused by the overflowing of what is known as Cave Creek have raised the question again of how best to deal with the situation, and the city has requested the Nepean Township Council to provide a separate storm drain to divert the flood water from Cave Creek and carry it to the low-lying land north

of the residential section. Cave Creek is situated on a rise just northwest of the city limits, and when it overflows each spring, the water flows down on to the streets and sometimes into the cellars of a great many of the residents. While accurate estimates have not been prepared, it is thought the cost would be approximately \$50,000.

* * *

LAY SEWERS.

At a recent meeting of the city council, the board of works was authorized to lay nine-inch subsidiary sewers on Caroline street and Grange and Smirlie avenues.

\$1,202 IS COLLECTED IN PLUMBING PERMITS

Winnipeg.—The sum of \$1,202.25 was collected in permits and license fees for plumbing and sewers during the month of February, according to a report issued by the city plumbing and sewer department. There were 49 permits and 19 licenses issued during the month, and 424 inspections were made.

Waterworks, Tenders, Construction, Contracts Awarded, Etc.

TENDERS WANTED

Toronto, Ont.—W. T. Pember, 127 Yonge St., will receive tenders for all trades required for altering building into offices, etc.

* * *

Montreal, Que.—A. E. Laliberte, 7171 Sherbrooke St. W., N.D.G., will receive tenders for plumbing and heating required for two cottages costing \$9,000.

* * *

Toronto, Ont.—J. M. Walkey, 326 Shaw St., will receive tenders for plumbing and heating required for five bungalows costing from \$6,500 to \$8,500 each.

* * *

Toronto, Ont.—A. Johnson, 32 Burgess Ave., will receive tenders for all trades and material required for erection of residence costing \$6,000.

* * *

Dauphin, Man.—H. T. Paynton, architect, has plans and will receive tenders, no closing date set, for erection of residence estimated to cost \$15,000 for M. Worn.

* * *

Truro, N.S.—H. McDougall, secretary school board, will receive tenders until April 9 for general contract for erection of school estimated to cost \$100,000. Separate tenders will be received for plumbing and steam heating. Plans

Catalogues and Booklets

PEASE FOUNDRY CO.

New price lists have been issued by the Pease Foundry Co., Ltd., Brampton, Ont., and 118 King St. E., Toronto, and cover all lines made by this company including the Pease "Economy" and "Ideal" steam and hot water boilers and radiators, as well as the "Economy" and "Brampton" warm air furnaces and combination heaters. Other lines such as combination coils, registers, tinstock, furnace repairs, etc., are also listed. A copy of new lists will be sent to the trade upon request.

* * *

FIREPLACE FURNISHINGS

The Toronto Foundry Co., Toronto, Ont., have issued a catalog of fireplace furnishings. The lines illustrated in catalog comprise portable baskets for coal or wood fires in various styles and sizes, fire grates, andirons, iron fireplace linings, dampers, ash dumps, etc.

The Toronto Foundry Co. manufacture and carry a stock of other lines not listed in the catalog, such as bell traps, ventilating air brick castings, dish covers, soot doors, etc., and invite enquiries for all material not listed.

with E. D. Vernon, architect, 802 Prince St.

* * *

Montreal.—S. Marotto, 195 St. Catherine St. E., is awarded general contract for store and apartments costing \$27,000 for P. Gladianos, 145 Craig St. E., and will receive tenders for plumbing and heating.

CONTRACTS AWARDED

Vancouver.—Plumbing contract for bungalow costing \$5,000 for H. H. Boyle, 937 Oliver St., is awarded to W. R. Menzies & Co., 823 Cormorant St.

* * *

Vancouver, B.C.—Office building costing \$50,000 for Ceperley Rounsefell & Co., 739 Hastings St. W. Plumbing and heating contracts are placed with A. H. Mitchell & Co., 546 Richards St.

* * *

Ottawa, Ont.—Contract for altering residence into duplex at cost of \$6,000 for O'Connor Estate. Plumbing and heating contracts are awarded to Holloway & Son, 370 Somerset St.

* * *

Ottawa, Ont.—Heating and plumbing contracts for garage costing \$18,000 for Drs. Liggett & Graham, 227 Clemow Ave., are awarded to Capital Hardware

Co., 845 Bank St., and Williams Bros., Ottawa E., and J. B. Band & Co., Bank St.

* * *

Toronto, Ont.—Board of Education awarded following contracts: Balmy Beach School, heating and plumbing, at \$17,500, H. A. Wickett, 127 Front St. E.

* * *

London, Ont.—Heating and plumbing contracts for remodelment of building at cost of \$15,000 for London Loan Co., 220 Dundas St., are awarded to Noble & Rich, 237 Queens Ave.

* * *

Toronto, Ont.—Irving Wood & Co., 2907 Dundas St. W., will erect a warehouse at cost of \$20,000 and awarded plumbing and heating and electrical contracts to Robert Paterson, 907 Keele St., and Mr. Gibbons, c-o owners.

* * *

Toronto, Ont.—Contracts for two residences costing \$9,000 for E. M. Hoare, 37 Roxborough Drive, are: plumbing, J. Fraser, 83 Eaton Ave.; heating, Howard Furnace Co.

* * *

Toronto, Ont.—Plumbing contract for residence costing \$26,000 on Wells Hill is awarded to J. Maude, 19 Rowland Ave.

* * *

Three Rivers, Que.—Plumbing contract for three flats costing \$15,000 for L. O. Trottier, 120 Bonaventure St., are awarded to Frenette & Germain, 8 Ste. Marie St.

* * *

Toronto, Ont.—Additional contract for erection of residence costing \$30,000 on Forest Hill Rd. is: plumbing and heating, P. J. Miller, c-o F. S. Mallory, architect, 164 Bay St.

WATERWORKS, SEWAGE, ETC.

Hamilton, Ont.—Tenders will be called for construction of 400 lineal feet of 24-inch sanitary sewer in one street for city.

* * *

Hamilton, Ont.—Tenders will be called shortly for construction of pipe sewer in one street for city.

* * *

Longueuil, Que.—Contract for concrete sewer pipe for Inter-Municipal Sewer Commission is awarded to Independent Concrete Pipe Co., Woodstock, Ont. Tenders will be called for the laying of the pipe.

STEAM PUMP IS COSTLY

Markham, Ont.—In the near future Markham citizens will vote on a by-law to spend \$5,000 on the purchase of an auxiliary gasoline pump to be used in the waterworks department should anything go wrong with the Hydro power.

SYSTEMATIZING THE OFFICE

Continued from page 41

comes in, his attention is immediately attracted to it, and while you are figuring his work, or if he is waiting for you to come in, this silent salesman is working for you. You will find it to your advantage to take a day off if necessary and go through your desk and re-arrange it along the lines suggested above. It may appear to you that this is a day wasted. Far be it from such. The time you will save by having things where you can reach them in a short while will amount to far more than the day spent in arranging your desk. Once you have done this, however, the battle has only begun, because there is the constant temptation to either leave things on top of your desk, or put them in some place other than where they belong. You will have to fight this tendency constantly at first, but before long it becomes automatic to put the same thing in the same place each time you have finished with it.

After you have accomplished this you will be surprised at the ease with which you accomplish each task that you undertake. Your mind is free from the worry of looking for some important paper or some other desk tool with which you work, and it gives undivided attention to the matter you have in hand. In addition to this you have set an example for the balance of your force, which is the most important of all. If they see that you are accomplishing results through order and system they will be quick to follow the example you have set. In this way work will move through your entire office with system and dispatch, and there will be no lost motion.

We will now turn to the opposite or bookkeeper's side of the desk. We will begin with Drawer number 8, which is the wide, shallow drawer in the center of the desk, and corresponds with Drawer number 4 on opposite side. This should be arranged as described under Drawer number 4.

Drawer number 9 should contain a Desk Organizer, each division labeled according to the bookkeeper's needs.

Drawer number 10, which is the next drawer below, should have a supply of all the blank forms needed, such as credit memos, material and delivery tickets, workman orders, and invoices. These should be kept in a file similar to the one described for Drawer number 2.

Drawer number 11, should have a supply of blank notes, trade acceptances and blank checks. Divide the drawer into separate compartments for each form.

Drawer number 12, the top drawer on the left-hand side, should have a stock of premise report cards, workmen daily

time cards and orders for extra work. Divide this drawer also with compartments.

Drawer number 13 should contain workmen's reports that have not been charged on the books, and invoices from your supply house that are to be paid. These invoices should be filed away in a separate folder, and the date on which each invoice has to be paid to secure the cash discount should be plainly marked on the invoice. Your bookkeeper should look through this folder every morning, and take out the invoices for which check must be mailed that day. Careful attention to this is necessary that no cash discount be lost.

Drawer number 14 should contain the other bookkeeping supplies such as ledger sheets, etc.

The slide boards at the top of the desk should also be used as previously described. On these boards can be pasted the cost and selling prices on articles that are sold most frequently, such as pipe and fittings. These cost figures can be in code, so that if a stranger should chance to be in the room when they are in sight no information as to prices will be obtained by them. The best code is the 100 per cent. list which is double the cost. The selling price, of course, need not be in code.

The Daily Calendar pad on top of desk should be used by the bookkeeper to jot down things that are to be done each day. It operates on the same plan as the Daily Tickler described for the use of the contractor.

The books of account, such as Daily Job Record File, Journal Binder, and Ledger Binders are kept in the safe when not being used. A telephone memorandum pad should likewise be kept on top of the desk during the day, where information connected with telephone calls is jotted down. At night this pad should be put away in Drawer number 8.

On top of the desk should also be a wooden tray or wire basket. In this the contractor puts such papers as he wishes passed out to others in the office. The bookkeeper takes these papers, setting aside those for himself, and seeing that the others reach the proper party. At night this box will fit into Drawer number 9 on top of the Desk Organizer.

You will see that by this arrangement the minimum number of papers and appliances is on top of the desk during the day. At night when the day's work is finished the top of the desk is cleared of everything with the exception of the ink well, the telephone and desk calendar pad. If your office is within sight of the street, people passing by see an orderly, well kept office, and get the impression that you are a man of good business habits. The party cleaning up at night has an opportunity to dust everything thoroughly, and there is no excuse for an accumulation of dirt and dust, as is too frequently seen in many offices.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

THE outstanding features of the plumbing and steamfitting markets are the new lower prices on radiators and steam and hot water boilers, declines on furnaces and ranges and heating stoves, and a new lower list on steel pipe. Plain galvanized and corrugated sheets are quoted at lower prices and tin plate is slightly reduced. No changes have been made in compression work, lead products, range boilers, enamelled wares, closets or pipe fittings. Metal lath is reduced and soldering coppers are lower.

In ingot metals there is not much change but a better tone is evident and outside markets are

inclined to be firmer with lead and copper showing advances.

In the primary steel markets there is little change in prices and less disposition is shown to quote concessions. The steel ingot production shows a continued decline. Pig iron prices are lower, but quotations have been reduced, it is stated, in an effort to reduce surplus stocks.

Wholesalers report a small increase in business in some lines, but demand seems variable and improvements are not maintained. A better feeling is evident, however, and with the early renewal of building operations an increase of sales is expected.

MONTREAL

MONTREAL, March 29.—Commodities of the heavier type which show reductions are radiators and boilers. Fittings also are revised, showing slightly lower quotations and goods of a sundry line, such as soldering coppers and small pumps, are also quoted lower. Metal lath shows a decline of from 15 to 20 per cent. Wrought iron and steel pipe are unchanged, while coke and charcoal IX tin, show a small decline. Revision of prices on many lines of stoves, ranges and furnaces has also taken place, ranging from 5 per cent. to 10 per cent. on stoves, and 7½ per cent. on furnaces. Heaters also show reductions on many lines, while others have lightly advanced. Galvanized sheets are also lower, the reduction being uniform on all gauges in American and English standard sheets. Such lines as enamelled ware, soil pipe, oakum, range boilers, cotton waste, eavestrough and conductor pipe are unchanged in price, remaining fairly steady. Ingot metals have a slightly firmer tendency, with little actual change in quotations. There is still little activity shown on the many staple commodities, building not yet being in evidence.

Soldering Coppers Reduced

Montreal.

A slight reduction has been made in the prices of soldering coppers. Three-pound irons are now selling at 47 cents per pound, and 4 to 8 pound at 45 cents per pound.

Tin Plate Slightly Lower

Montreal.

A reduction of \$1 on the 112 sheet coke tin case, and 50 cents on the 56 sheet charcoal tin has been made, following being the revised prices: 20x28, 112, IX, \$24.50; 20x28x56, IX, \$13.20.

Small Pumps Lower

Montreal.

Lower prices are now quoted on the cistern or cottage pumps, following being

the new quotations on the different sizes of both pitcher and closed spouts:

Pumps—	Pitcher		Closed Spout
	No. 2	No. 3	
No. 2	3 10	3 40	4 00
No. 3	3 40	4 00	4 60
No. 4	4 05	4 60	5 00

Cook Stoves and Ranges Decline

Montreal.

Many lines of cook stoves and ranges, particularly of the better and higher priced stoves, have been reduced. The reduction amounts to approximately 10 per cent. Lower priced stoves and ranges are said to be unchanged under the revision. Heaters are also revised, and while slightly lower quotations are reached on some, others show a slight

advance. With high wages and the continued high freight rates, little further changes are expected. However, the present lowering is hoped to have a stimulating effect on sales, especially on bookings for next fall.

7½% Reduction in Furnaces

Montreal.

Accompanying the reduction in stoves, hot air furnaces also are lowered to the extent of 7½ per cent. The high productive and delivery costs that exist on furnaces are much the same as on stoves, and this reduction is looked for to have a tendency to more activity on fall bookings.

Lead Products Steady

Montreal.

With the exception of wire solder, which is reduced from 35 to 34 cents per pound, quotations are holding fairly steady on lead products. A firmer tendency has been shown in pig lead recently, and when this metal was at lowest level with the market very unsteady prices on the different lead products showed very little change other than small revisions. It is now felt that with perhaps a few further slight revisions prices will remain at present levels for some time. Following are the quotations:

Lead pipe, per 100 lbs.	12 60
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 18½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs, sq. ft., lb	0 10½
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 26
Do., strictly, lb.	0 24

MUELLER Stop Cocks, Sill Cocks and Basin Cocks

The wide range of design, the uniform quality and the tested worth of each article make it a pleasure for plumbers to sell and install **MUELLER** goods. The precision with which every thread and joint is finished insures satisfaction to the user and saves time for the plumber. See A-1240, A-1245, A-1513 and A-1517.

Write for catalog and prices. Mail orders given immediate attention.

Do., wiping, lb.	0 21½
Do., wire, lb.	0 34
Zinc sheets, casks	0 14
Do., broken lots	0 15½

Iron and Steel Steady

Montreal.

With regular declines noted on the United States markets in the different bar irons and steels, and reductions made at other Canadian sources, prices remain unchanged locally. Lower prices may be expected, however, considering these outside fields. The demand continues small, sorting shipments are being forwarded but orders for large quantities are still withheld. Stocks are comparatively light in the jobbers' warehouses, but these supplies can easily be replenished when the demand becomes heavier. Following are the present quotations:

Common bar iron, 100 lbs.	4 00
Refined iron	5 50
Iron finish machinery steel	4 05
Mild steel	4 00
Single reeled machinery steel	6 80
Band steel	4 00
Spring steel	6 00
Sleighshoe steel	4 00
Tire steel	4 20
Toe calk steel	4 90
Harrow tooth steel	4 15
Mining tooth steel, per lb.	0 23
Black Diamond tool and cast steel, per lb.	0 23

NOTE.—Refined iron is approximately \$1.50 per 100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Flats, iron and steel, 3-16 and thinner, 50c per 100 lbs. extra.

Waste Materials Unchanged

Montreal.

No change, either in prices or conditions of the market, are reported this week. Dealers have experienced a prolonged quiet period, and enquiries have brought little actual business. Nominal quotations are as follows on the different scrap metals and materials:

Dealer's Buying Prices.

Automobile tires	0 75
Yellow brass	0 06
Red brass	0 11
Light brass	0 04½
Scrap zinc	0 04
Lead, heavy	0 04
Lead, tea	0 02
Light copper	0 09
Heavy copper	0 11
Wrought iron, R. Rd., No. 1 per gr. ton	13 00
Malleable scrap (ton)	15 00
Pipe scrap (ton)	8 50
Heavy melting steel	15 00
No. 2, busheling	5 00
Boiler plate	0 11
Stove plate (ton)	20 00
No. 1 machinery cast	25 00

Revision in Fittings

Montreal.

Many lines of fittings are revised, and quotations that run at 20 per cent. off are now 22½ per cent. off list prices. Other reductions are of the same raising of percentage off list prices. Ample stocks are stated to be carried by all jobbers, and manufacturers are carrying full bins of all kinds. The shortage at the latter end of last year is well overcome. Business continues fair on fittings, due, no doubt, to dealers' replenishing their stocks for spring demands when work in plumbing and repairing

will begin. Present quotations are the following:

Bushings, cast	22½%
Do., malleable	22½%
Flanges	20%
Plugs	20%
Flange Unions	7½%
Malleable Unions	35%
Dart Unions, black	20%

Galvanized Sheets Lower

Montreal.

Reductions on both U.S. standard and English standard galvanized sheets are made this week. The U.S. sheets are 50 cents per 100 pounds lower on all gauges, while in English sheets, Queen's Head is 75 cents and Fleur-de-Lis 50 cents lower throughout. Quotations on plates, black and galvanized sheets are nominal and little uniformity exists on prices quoted by the different jobbers. Conditions are not yet on a settled basis on the Pittsburgh markets, and operations are curtailed in many sources, production still much below normal times, and the export and home demand almost at a standstill. Following are quotations:

PLATES—	
10 gauge	6 25
12 gauge	6 30
14 gauge	6 45
16 gauge	6 55
BLACK SHEETS—	
10 gauge	6 50
12 gauge	6 55
14 gauge	6 60

16 gauge	6 80
18-20 gauge	7 95
22-24 gauge	8 00
26 gauge	8 10
28 gauge	8 20
Sheets 36 in. wide, 10c. per 100 lbs. extra.	

GALVANIZED SHEETS—

U.S. Standard—

10½ gauge	10 25
28 gauge	9 75
26 gauge	9 50
22 and 24 gauge	9 35
20 gauge	9 15
18 gauge	9 15
16 gauge	9 00
Queen's Head Fleur-de-lis	
28 gauge	10 75
26 gauge	10 50
24 gauge	9 90
22 gauge	9 55
18 and 20 gauge	8 85

NOTE.—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Plumbers' Oakum Unchanged

Montreal.

Plumbers' oakum registers no change in price locally, selling at \$4.50 per 50-pound bale. Broken quantities are one cent per pound extra.

Radiators and Boilers Lower

Montreal.

Quotations on radiators and boilers have been lowered on practically all lines. The reduction is not uniform, but different styles and sizes are affected more than others, approximately from 5 to 20 per cent. being the decline. Enquiries and contracts are very encouraging, but the actual business offering is still small. In Quebec province, building operations are not as promising as in other provinces, and this has a direct bearing on the sale of heating materials. This decline is the second since the beginning of the year, and with productive costs and high freight rates on heavy materials of this nature showing no reduction, manufacturers are inclined to state that their share of the lowering of prices is being borne, and further reductions are unlikely for some little time. Following are the present quotations:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.

45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.16; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount, 48% for hot water and 49% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 45%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 55% off list.

Square or sectional hot water or steam boilers, 15-in., 5%.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in. to 36-in., 5% off list.

Square or sectional steam boilers, 19-in. to 36-in., 5%. Ontario Government trimmings, net list.

Round steam boilers, standard trimmings, 15 per cent. off. Ontario Government trimmings, 10%.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Soil Pipe Prices Steady

Montreal.

Soil pipe or fittings undergo no change in prices and quotations are holding steady for some time past. The sales continue backward, the reason, as in many other commodities of plumbers'

materials, laid at the door of building activity. Following are the prices of pipe and fittings:

SOIL PIPE (medium and extra heavy)—
2, 3, 10%; 5 and 6-inch, 15% discount.
4-inch, 20% discount.
8 inch, add 20% to list.

FITTINGS—
2 to 6 inch fittings, 40 per cent. discount.
8-inch, net.

Enamelled Ware Remains Quiet

Montreal.

Business in the different lines of enamelled ware continues quiet, sales still being small and filling only actual requirements. With the open weather continuing, allowing excavations and outside working, trade should now brisk up to a certain extent. No change has been made in prices, and present prices have held for some time now. Following are quotations:

Sinks, roll rim, 18x30 in.	18 40
Sinks, flat rim—	
16 x 24..... 1 only 2 only 3 only	
18 x 30..... \$6 00 \$5 92 \$5 84

18x21" Apron F169 or P4205	14 08
17x19" Roll Rim, F241 or P4345	10 08

No Change in Closets

Montreal.

There has been no change in closets, neither in prices nor activity in sales. As in the case of other enamelled ware, closets are only moving in small orders of present day needs. Quotations are the following:

Closet, standard outfit	\$34 00
Do., with post hinge seat	35 00
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	37 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	12 00
Do., reversible trap bowl, less spud	13 25
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	17 60
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies, less seat	19 00

Slight Improvement in Range Boilers

Montreal.

The movement of range boilers has shown a slight improvement in the last week or two, although other commodities in plumbing materials are reported more or less quiet. The electric welded boiler is now stocked by jobbers and is said to be of a better quality than was previously offered to the trade. Sales of these are not large, dealers still ordering the riveted boiler in preference. Following are the quotations on the riveted boilers in the different sizes, showing no changes.

RANGE BOILERS—	Stand.	Ex.	Hvy.
30-gallon	13 00	15 00	
35-gallon	15 00		

40-gallon	17 00	19 00
52-gallon	24 00	
66-gallon	32 00	
82-gallon	42 00	
100-gallon	50 00	
120-gallon	60 00	

Waste Sales Improved

Montreal.

With an easier tendency on other cotton products and lower prices on many other lines cotton waste is still holding unchanged. Business has shown a decided improvement this month, which may be accountable to a certain extent for maintenance of prices. Following are present quotations:

Cream, Polishing	Q 22
WHITE

Above lines subject to trade discount for quantity.	

Eavestrough, Etc., Unchanged

Montreal.

There has been no change made in conductor pipe, eavestrough or conductor elbow quotations, and trough and piping are still selling at 50-10 per cent. off list prices and elbows 50 per cent. off. Although bookings have been exceedingly small, an increased volume of business is expected with the season opening early. Stocks are ample to meet any hurried demand that might come to hand when the weather permits troughing. Following are the list prices with discounts:

EAVETROUGH—	
O.G. Square Bead—	
Per 100 ft.	
8 in.	15 90
10 in.	17 70

6 inch	29 00
Discount 50% off.	

Nominal Quotations on Corrugated Sheets

Montreal.

The list prices on corrugated sheets are shown unchanged. With the lighter gauges, however, prices are by no means uniform, and continue to range from \$7.50 to \$8.78 net per 100 square feet.

The 28 and 26 gauges are practically the only weights moving at present. Following are the list prices:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	9 50
No. 26 gauge	10 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00

Less 7½%.
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

Metal Lath Reduced

Montreal.

Lower prices are now quoted on metal lath, both painted and galvanized. The reduction is from 15 to 20 per cent. on the different weights. Following are the new prices:

METAL LATH.	
Painted—	
26 gauge, sq. yd.	0 35
24 gauge, sq. yd.	0 39
23 gauge, sq. yd.	0 45
Galvanized, 11c per sq. yd. extra.	
Discount, 10%.	

Compression Goods Steady

Montreal.

There has been no change made in quotations on the different lines of compression goods shown below. Some lines of brass valves are reported easier, but prices are not as yet affected. A general sorting business continues, this having kept up fairly well during the early months of this season. Following are present prices:

Compression work, standard	34%
Fuller work, standard	30%
Bath cocks, compression	25%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard	34%
Roundway stop and waste cocks, standard	34%
Brass steam cocks, standard	10%
Radiator valves, standard	23%
Do., removable disc	38%
Globe, angle and check valves, standard	5%
Gate or straightway	Net
Jenkins globe	10%
Jenkins gate valves	10/7%

Slow Movement in Boiler Tubes

Montreal.

There have been no further changes made in the prices of boiler tubes since the reduction of a few weeks ago, with a slow movement experienced. Following are the quotations:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00	
1½ inch	27 25	
2 inch	26 25	
2½ inch	29 75	27 00

3½ inch	33 00	28 50
4 inch	44 75	31 50
	49 25	40 00
	63 50	43 50
	85 00	55 50

Little Change in Ingot Metals

Montreal.

There is very little change in ingot metals. However, some are showing a slightly firmer tendency if anything. Tin and copper has made slight advances on the London market, while on the U.S. markets they are fairly steady. With the exception of aluminum, which is a little firmer with the quotation advanced one-half cent, all other metals remain unchanged in price.

TIN—The New York market is some-

Anthes Syphons are made in one piece, without seam or joint, and, operating on purely natural laws, with no moving parts to get out of order, they give great satisfaction in use.

Farmers Without Water Installations

Get in touch with those farmers in your vicinity who have no water and sewage installations.

Induce them to consider the advantages of running water and modern conveniences.

Science has demonstrated that isolated dwellings can be made just as sani-

tary as communities, and the "Anthes" Syphon does for the farm what the trunk sewer does for the city.

Anthes Foundry,

Manufacturers, Cast Iron Soil Pipe

JEFFERSON AVE.

TORONTO

ANTHES FOUNDRY LIMITED

Sewage and Are Your Prospects

We know that a complete water and sewage system is to be installed where a few years ago it was not considered feasible.

During 1920 over 800 of our systems were installed in Ontario alone! Get after some of this business, Mr. Plumber. It is worth while.

Our Bulletin No. 2 tells all about it. Write for one.

Anthes Syphons reflect great credit on the man who installs them. The "credit" so reflected is often changed to "cash" by the influx of new business following the success of a new installation of Anthes Syphons.

Limited

and Fittings

SASKATCHEWAN AVE.
WINNIPEG

ANTHES FOUNDRY LIMITED

what firmer without much actual business being done. In London this metal has been unsettled but closed with slightly higher quotations than last week at £157 for spot standard and £163 for straights. The local price is unchanged at 36½ cents.

COPPER—London and New York both show slight advances all week. There is a report that several American smelters have closed, this evidently stiffening the market. With a small demand, present local prices are 18 cents for electro and 17¼ cents for casting.

LEAD—Lead in London also was lower at the beginning of the week, stiffening toward the end. The United States market shows very little change. There has

been a very small demand locally, and the quotation remains steady at 6½ cents.

SPELTER—Early in the week this metal showed an easier tendency but closed firmer in London. East St. Louis has held fairly steady at \$4.70. Local price is unchanged at 8½ cents.

ANTIMONY—The price on antimony is a little weaker in New York, with a small demand. A few local enquiries have come to hand, but actual business has not yet come to hand. Local price unchanged at 7¼ cents.

ALUMINUM—This metal continues quiet, and very little business is offering. Local quotation is slightly firmer at 35 cents.

TORONTO

TORONTO, March 30.—Some important price changes are recorded in prices of plumbing and steamfitting supplies this week. Radiation and hot water and steam boilers have been reduced in price. Steel pipe is down again about three points, making the second list within a month. Furnaces show a small reduction and some lines of ranges and heaters have been revised and are showing lower quotations. Among other lines reduced in price are soldering coppers, some lines of solder, plumbers' oakum, black and galvanized sheets, and some makes of wrenches.

Wares and closets are holding unchanged and no alterations are made in compression goods, lead pipe, eavestrough, etc.

Business is still quiet, but a very slight improvement in some lines is reported and with the approach of the spring there is a more optimistic feeling.

Soldering Coppers Reduced

Toronto.

A reduction of about 10 per cent. has been made in the price of soldering coppers and the new base price for 4 pounds is 44 cents per pound.

Steel Pipe Again Reduced

Toronto.

Another reduction has been made in the price of steel pipe, making the second decline within the month. The decrease amounts to three points on steel pipe and wrought is again unaffected. There is little increase of business reported in pipe, and the buying is still largely from hand to mouth. Wholesalers' stocks are in better shape now and the shortages have been mostly overcome. With the new building operations soon commencing it is expected that more activity will soon be shown and sales will become larger. On U. S. markets it is reported that the independent pipe mills are now making concessions of from 2½ to 5 per cent. from list and the Industrial Board level has hitherto been fairly well adhered to. The new pipe list became effective March 29 and is as follows:

Price List No. 50. March 28th, 1921
Standard Butt Weld Pipe S/C

Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 40

No Change in Wares

Toronto.

Business shows little change in enamelled wares, but with the renewal of building operations there is a better feeling prevailing and it is expected that the coming month will see an improvement in demand. Stocks are said to be in good shape and prices show no change. The following are current quotations:

Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
All Steel Enamel Baths, 4, 4½ or 5 ft., net	\$16 25

All above list except lines marked net.	
Discount 20% off these prices.	

Ranges and Heaters Revised

Toronto.

Prices have been revised on some lines of ranges and heaters. The reduction

amounts to about 10 per cent. on the ranges reduced, but the declines do not apply to all lines, and the revision on heaters shows some lines slightly lower, others unchanged and a few have had to be advanced slightly in price. Present sales are small but with the fall booking about to commence it is hoped that the reductions will stimulate buying.

Hot Air Furnaces Lower

Toronto.

A reduction has been made on warm air furnaces and some makes are approximately 7½ per cent. lower in price. Sales are not large at the present time, but it is expected that lower quotations will have an effect on the fall bookings.

Hot Water Boilers Lower

Toronto.

Prices have been revised on steam and hot water heaters and tank heaters and are lower. The declines are varied on the different lines but approximate 10 per cent.

Radiation is Lower

Toronto.

Effective March 17 a change took place in the price of radiators, making a reduction in prices of from 10 to 12 per cent. The new discount on the standard window radiators is 48 per cent. off list for hot water and 49 per cent. for steam. There is a better feeling in the trade and an early increase of activity is expected. The following are the new quotations:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
Discount 48% for hot water and 49% for steam.
Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 45%.

Boiler Tubes Quiet

Toronto.

Very little change is shown in boiler tubes and sales are reported to be very light with demand scrappy. Prices are nominally unchanged, although some lower quotations have been recorded.

	Per 100 feet	
1 inch	\$28 00	\$.....
1¼ inch	30 00
1½ inch	32 00
1¾ inch	33 00
2 inch	35 00	28 00
2¼ inch	38 00	32 00
2½ inch	46 00	36 00
3 inch	54 00	45 75
3½ inch	70 00	46 00
4 inch	92 00	60 00

Corrugated Sheets Move Better

Toronto.

A slight increase in business is noticed in corrugated sheets, but it is recognized that it is still early for much activity in this line and during the next month sales will likely improve. Quotations are holding at the recent changes on the lighter gauges which are the only ones that show much of a demand. Prices are as follows:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	9 50
No. 26 gauge	10 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00
Less 7½%.	

Lighter than 24 gauge and wider than 27 in.,
75c per square extra.

Westcott Wrenches Lower

Toronto.

A slight reduction has been made in the price of Westcott wrenches and these are now about 5 per cent. cheaper.

Conductor Pipe Holding

Toronto.

With the season advancing there is a little better demand for conductor pipe and eavestrough. Stocks appear to be in good shape and no shortages are likely this season. Prices are unchanged and are the following:

TROUGH (Eave)			
O. G., Square Bead and half round.		Size in girth:	
Per 100 ft.		Per 100 ft.	
8-in.....	\$15 90	15-in.....	\$28 30
10-in.....	17 70	18-in.....	36 50
12-in.....	21 20		
Less 50/10 per cent.			
PIPE (Conductor)			
Plain, round or corrugated.			
Per 100 ft. in 10 ft. lengths.			
2 in., in 10-ft. lengths, list			\$18 40
3 in., in 10-ft. lengths, list			22 30
4 in., in 10-ft. lengths, list			29 60
5 in., in 10-ft. lengths, list			40 00
6 in., in 10-ft. lengths, list			49 00
Less 50/10%.			

Corrugated Elbows Quiet

Toronto.

No changes have been made in the price of conductor elbows, which remain at the list made early in the present year. Sales show very little change, but should be increasing during the coming month. quotations are the following:

2 inch, list	\$5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 50%.	

Some Solders Reduced

Toronto.

Slight reductions have been recorded in solder prices, but quotations on lead pipe and sheets remain unchanged and the outside primary lead markets show a firmer tone with advances made by the large producers in the U.S. A small increase of business is reported, but the present movement is by no means active. The present quotations are as follows:

Lead pipe, list, per lb.	0 12½
Lead waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to discount of 10%.	
Lead traps and bends	10%
Lead sheets, 4 to 6 lbs. sq. ft., in rolls, lb.	0 09½
Cut sheets ½c to ¾c lb. extra and cut sheets to size 1c lb. extra.	
Solder, wire, lb.	0 34
Do., 40-60	0 26½
Do., 50-50	0 29
Do., strictly, lb.	0 24
Do., commercial, lb.	0 22
Do., guaranteed, lb.	0 27
Do., wiping, lb.	0 22
Zinc sheets, per lb.	0 16
Calking lead	0 08 0 09

Variable Demand for Bars

Toronto.

The amount of business in iron and steel shows a little variation during the closing days of the month from what it did at the beginning, but it has been spasmodic, with an improvement followed by a falling off. In the United States markets pig iron production is being further curtailed all the time, and out of 166 merchant furnaces only 27

are now operating and several of these are expected to blow out in the near future. This curtailment is bound to have a sustaining influence upon price of iron, it is believed, although some time may elapse before stocks are absorbed. Quotations show no change from the last report and are as follows:

IRON AND STEEL

Common bar steel, 3-16 in. and lighter	\$ 4 50
Do., ¼ in. and heavier	4 00
Common bar iron, 3-16 in. and lighter	4 50
Do., ¼ in. and heavier	4 00
Angle base	4 50
Horseshoe iron	6 00
Tire steel	5 95
Band steel	5 00
Spring steel	12 75
Mining drill steel	28 00
Crucible cast steel	35 00
Sheet cast steel	35 00
Sleighshoe steel	6 00
Norway iron	15 00
Toe caulk iron	6 70
Hoop steel	6 00

Range Boilers Slightly Improve

Toronto.

A little better demand is reported for range boilers, though sales appear to be for present needs. Some lower quotations are reported in a few quarters on the 30 gallon standard size, and are \$11.50 for the electric weld and \$12.50 for the riveted boiler. Other jobbers are holding to the previous quotations, which are as follows:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	\$13 00	\$15 00
35 gallon	15 00	17 00
40 gallon	17 00	19 00
52 gallon	24 00	28 00
66 gallon	32 00	38 00
82 gallon	40 00	50 00
100 gallon	50 00	60 00
120 gallon	60 00	70 00

Compression Work Holding

Toronto.

No further changes are noted in compression work and prices remain as last report. Sales continue fairly light, though an improvement over last month is recorded. The majority of the sales are of a sorting variety and little stocks are being held.

Oakum Quotations Lower

Toronto.

In small quantities 11 to 12 cents is being quoted for plumbers' oakum, but lower prices are in effect for larger quantities and 50-pound bales are quoted at \$4.

Cotton Waste Unchanged

Toronto.

Prices are holding unchanged on cotton waste, and the demand is variable with little improvement.

Brass and Copper Sheets

Toronto.

There has been no further change in brass or copper prices in sheets, rods or tubing and quotations remain as follows. The tendency is firmer in primary markets.

BRASS—	
Sheets, base, per lb.	\$0 29
Rods, base, per pound	0 26
Tubing, base, per lb.	0 36
COPPER—	
Rods, base, per pound	0 34
Soft sheets, plain, 16-oz. and heavier, lb.	0 34
Do., plain tinned	0 40
Do., polished and tinned	0 45
Tubing	0 39

Lead and Oil Prices

Toronto.

No changes have taken place in white lead in oil prices or in red lead prices. In less than ton lots the quotation for white lead is \$15.30 per cwt., and dry red lead \$15. Single barrels of raw linseed oil are quoted at 87 cents per gallon and boiled at 90 cents. Turpentine is now selling at 95 cents for single barrels, 15 cents per gallon extra being charged for smaller quantities with containers charged extra.

Lower Quotations on Sheets

Toronto.

A slight increase in the demand for sheets is reported by some wholesalers, but the improvement is not a steady one. The regular spring buying has not yet been felt and it is evident that many dealers are just sorting up and carrying sufficient stocks for immediate needs only. Wholesalers' stocks are ample for present demands and much of the stock on hand is reported to have been bought at higher prices than the present quotations. Some lower quotations have been made but do not appear to have drawn much extra business, and buyers are playing a waiting policy. In the U. S. the sheet mills are operating at a lower rate, although at a better one than earlier in the year when many of the independent mills were closed down. The quotations here are lower and the following are general:

BLACK SHEETS

14 gauge	5 80	6 80
16 gauge	5 90	5 90
18-20 gauge	6 25	7 25
22-24 gauge	6 30	7 30
26 gauge	6 35	7 35
28 gauge	6 50	7 50

PLATES

10 gauge	5 75	6 20
12 gauge	5 80	6 25
14 gauge	5 85	6 30
16 gauge	5 95	6 40

GALVANIZED SHEETS

Premier and Apollo

10½ oz.	8 90	9 80
U.S. 28 gauge	8 50	9 50
U.S. 26 gauge	8 20	9 20
22 and 24 gauge	8 05	9 05
18 and 20 gauge	7 90	8 90
16 gauge	7 75	8 75
12 and 14 gauge	7 70	8 70

Irregular Ingot Market

Toronto.

Business in ingot metals is reported to be irregular again, and the demand is very "scrappy." Prices generally have been maintained, and in outside markets a firmer tone is shown both in copper and lead. With the absence of quotations from London, where markets have been closed on account of holidays, the American markets have been quiet.

TIN.—There has been a steady up-trend on London markets in tin and the total gain for the week has been about £12. New York markets gained \$2 during the week and consumers are showing more interest, although the orders placed are small. Prices locally remain unchanged and are 38 cents.

COPPER.—The copper market is firmer but there is little business doing. Advances of one-quarter cent a pound

have been made on United States markets, due, it is stated, to the closing down of several copper mines and the contemplated curtailment and shut-down of some of the large producers, together with an increased demand for copper and brass products. Prices also advanced £2 on London markets. Quotations here remain at 18 cents for casting copper.

LEAD.—A firmer tone is reported in the lead market, but there is little movement. The output is reported as being curtailed, and the larger producers have advanced their prices, making the first advance in lead prices since August 12, 1920. London markets show an upturn although the demand has dwindled. Prices locally are unchanged at \$6.

SPELTER.—This metal has been the weakest of all this week though prices are holding unchanged. Few sales are reported and the market is dull and sagging. Quotations here remain at \$7.25.

ANTIMONY.—This metal is quiet with demand negligible. Heavy arrivals on United States markets led to shading

of prices. Quotations here are still 8 to 9 cents.

ALUMINUM.—A revival in the automotive industry is leading to an increase of activity in this metal. Prices on outside markets remain nominally unchanged.

No Demand for Scrap

Toronto.

There is little change in the waste material market. Buying is on the light side and no immediate change is looked for. With the steel mills operating at a low rate there is little call for scrap, and the same applies to non-ferrous metals. The consumers of scrap have stayed out of the market except for domestic requirements. Inquiries have been few and sales of small quantities. While a slight improvement in the price of virgin metals is giving the market a better tone, expectations that business would soon improve have not been realized.

WINNIPEG

WINNIPEG, March 30.—There is a tendency towards lower prices on many plumbing and steamfitting goods, and a number of reductions are recorded during the past few days. Lower quotations are given on black and galvanized sheets, soldering coppers, hot water and steam boilers and radiation. Prices are withdrawn on Fuller work and compression goods are reduced. Revisions have been made in iron and steel prices and quotations are lower. Wrought iron pipe is being sold at the list price issued March 2nd. Range boilers are unchanged and are moving but slowly. Cotton waste remains at recent declines. Business generally remains fairly quiet, but with the milder weather at hand the trade is hopeful of an early improvement.

Range Boilers Quiet

Winnipeg.

Prices on range boilers are unchanged, with very little movement. A few small orders are being received, but they are for present requirements. Prices now quoted are:

30 gal., \$15.00; 35 gal., \$16.50; 40 gal., \$19.50; 52 gal., \$26.00; 66 gal., \$35.00; 82 gal., \$45.00; 100 gal., \$57.00; 120 gal., \$70.00.

Cotton Waste Unchanged

Winnipeg.

No further change is made in the price of cotton waste. A decline was made just recently and an improvement is noted on the sales and business has improved during the last two weeks. Prices are as given below:

Cream, polishing, 24½¢ per lb. White XXX Extra, 21¢ per lb.; XX Grand, 20¢; XLGR, 19¢; X Empire, 17½¢; X Press, 16¢. Colored Fancy, 17½¢ per lb.; Lion, 16¢; Standard, 14½¢; Popular J., 13¢; Keen, 11½¢.

Sheets Are Reduced

Winnipeg.

Lower quotations are given this week on black and galvanized sheets. Prices of sheets are governed to a great extent at present by stocks on hand, and even lower prices may be expected in the near future, it is believed. Present quotations are as follows:

	Black.	Galv'd.
10 gauge, per 100 lbs.	7 30
12 gauge, per 100 lbs.	7 30
14 gauge, per 100 lbs.	7 35
16 gauge, per 100 lbs.	7 45	9 50
18 gauge, per 100 lbs.	7 95	9 65
20 gauge, per 100 lbs.	7 95	9 65
22 gauge, per 100 lbs.	8 00	9 80
24 gauge, per 100 lbs.	8 00	9 80
26 gauge, per 100 lbs.	8 05	9 95
28 gauge, per 100 lbs.	8 40	11 55
10½ oz., gal.	10 95

Soldering Coppers Reduced

Winnipeg.

The prices have again been lowered on soldering coppers and are as follows:

1 lb., 55½¢ per lb.; 1½ lb., 51½¢; 2 lb., 48¢; 2½ lb., 47¢; 3 lb., 45¢; 3½ lb., 45¢; 4 lb., and larger, 44¢.

Bar Iron and Steel Lower

Winnipeg.

The prices have been reduced from 30 to 50 cents per hundredweight on bar iron and steel and new quotations are as follows:

BAR IRON.—Rounds and squares, 3-16, ¼ and 5-16 in., \$7 base; rounds and squares, ¾ to 2 in., and flats up to and including 1 x 4 in., \$5.65 base; rounds and squares, over 2 in., and up to and including 2½ in., and flats over 1 x 4 in. up to 6 in. wide, \$6.40 base; rounds over 2½ in. to 6 in., \$6.90 base; band steel, \$5.95 base.

SOFT OR MILD STEEL.—Rounds and squares, 3-16, ¼ and 5-16 in., \$7 base; rounds and squares, ¾ to 2 in., and flats up to and including 1 x 4 in., \$5.95 base; over 2 in. up to and including 2½ in., and flats over 1 x 4 in. up to 6 in., \$6.40 base; rounds over 2½ in. to 6 in., \$6.90 base.

THE "NEW IDEA" PIPELESS FURNACE

*Presents a golden opportunity
for live dealers to make money*

We are going to appoint one exclusive dealer in each town and city to handle the "New Idea" Pipeless Furnace and we are going to back those dealers up with advertising in newspapers and farm papers that will create a big consumer demand. Now is the time for you to investigate this wonderful pipeless heating plant.

The "New Idea" Pipeless Furnace is easy to instal—prevents tearing up floors and walls—uses little fuel and will last a lifetime.

Descriptive pamphlet sent upon request. Write for it to-day—it means real money for you.

Wrot Iron Pipe Unchanged

Winnipeg.

The price remains unchanged for wrought iron pipe and the list which became effective on March 2 is being used. With stocks now in fairly good shape, the scarcity on some sizes being well overcome, lower prices are looked for in some quarters. The prices now in effect, however, are quoted below:

Size ins.	BLACK PIPE F.O.B.					
	Winnipeg	Calgary, Edmonton, Lethbridge & Medicine Hat.	Saskatoon.	Regina.	Brandon.	
	[Add to Winnipeg price.]					
3/4	6.21	0.30	0.20	0.17	0.11	
1	5.67	0.53	0.34	0.30	0.19	
1 1/4	5.85	0.70	0.45	0.40	0.26	
1 1/2	7.88	1.05	0.67	0.59	0.38	
2	9.72	1.40	0.90	0.79	0.51

Sheet Lead Is Down

Winnipeg.

A reduction has been made in prices of sheet lead and it is quoted at 10 cents per pound for full rolls and 11 cents per pound for less than rolls.

Boilers and Radiators Reduced

Winnipeg.

Business is quiet on boilers and radiators and few sales are being made. The prices, however, have been revised and are approximately 5 per cent. lower. Quotations are as follows:

Steam Boilers	Net	List
Hot Water Boilers	51%	
Radiators, Steam	43%	
Radiators, Water	42%	
Hospital Radiators, Steam	40%	
Do., Water	39%	

No Change in Soil Pipe

Winnipeg.

Soil pipe and fittings are held unchanged at the prices set last month and sales are slow at this time of the year. Quotations are as follows:

CAST IRON SOIL PIPE—2 and 3 in., 5% off;	
4 in., 17 1/2% off; 5 and 6 in., 10% off; 8 in., 10% advance.	
SOIL PIPE FITTINGS—2 to 6 in., 35% off;	
8 in., 10% advance.	

PRACTICAL HELPS FOR TINSMITHS

Continued from page 33

set per space. This, of course, requires a perfectly laid out drawing showing all strake lines in their true form. Few workmen do this, preferring rather to lift the patterns direct from the skeleton as above outlined. Even in factories where these boats are made in large numbers, a wooden form is first made to better determine the fullness of body and fineness of lines and curves. When this is properly shaped, the strake patterns are lifted direct from this templet. Hence we see it requires considerable study and the watching of points to make a good boat.

SEWAGE DISPOSAL FOR SMALL COMMUNITIES

Continued from page 36

sludge; C—effective capacity of digestion chamber in cubic feet.

The sedimentation or first story tank should be designed for velocity of 1.75 feet per inch with 2 to 3 hours retention.

The clarified tank effluent is collected in a dosing chamber (which feeds the filtration area by means of an automatic syphon the size and capacity of which is governed by the number of people the installation is designed for), same can discharge into land drains for land treatment or into distributing pipes for final treatment on artificial filter beds which will be fully described in the section dealing with land filtration.

The Imhoff installation, due to the depth of the tank, is more costly to instal than either the septic or settling tank, but if fully and well designed it will prove much the better way of treating the sewage from large buildings besides having a modern disposal works which will give and produce better results, proving an excellent investment.

HOUSECLEANING YOUR BUSINESS

Continued from page 40

to task and plug up the weak spots in yesterday's efforts so as to avoid them in to-day's endeavors. First, one must know their business and that means for the plumbing operator that he cannot be content with mechanical knowledge alone but must know the figure facts of costs, etc. Then, one must have confidence in that ability and also in their ability to complete their part of the transaction. Then, one must create the confidence that they have to the buyer and having, to put it in slang, had their "bluff" called by being given the business one must produce according to form so that they strengthen the first confidence given and secure future business on something other than price competition, namely, service.

The Operator Who Commences His Own Business

There will always be more workers on the lower scales of remuneration than

the higher ones. Have you not often noticed that others, or perhaps it has occurred with you, that the operator starts in business because his previous employer seemed to have a lot added on between his cost and his selling price. The new operator thinks he can show the world the last thing in efficiency by working to a lower market. He is perhaps urged on by a would-be customer with a supposedly friendly interest. He gets a lot of business and then finds later on that there must be a lot of holes for his profit to slip through that he originally overlooked. He raises the ante and immediately business drops off a little because another man has been induced to take the plunge and fill his shoes as a budding operator. Now do not suppose that I am trying to advocate high prices because I do not, and if this industry can by housecleaning and improvements in its methods without the impairment of its service and responsibilities, or if any individual operator can by the same means transact his business on say a percentage of 10 per cent. for overhead and profit, then I say that this is the mark that we must strive for because business competition creates success by the "survival of the fittest" route.

The trouble occurs when so many only think or guess they can and then because someone said 10 per cent. they all like sheep fall into line without knowing for sure what they can or cannot do, and without figuring the result. Do not guess in business to-day because when you fall others are taken with you.

Essential it is then that one must houseclean all angles of their business, and essential it is that by improved methods and better efficiency one must market their product or service at as low a price as will stand up under competition but in so doing one must protect their creditors (merchandise, labor, expense, old age, your family and the public), which in substance means that one must make a profit for we are only passing the buck to posterity to pay for the short-changing you are doing to-day.

QUESTIONS AND ANSWERS

Continued from page 38

square and 8 feet deep from overflow to bottom of chamber.

In describing these cesspools, we do not wish to be understood as advocating the cesspool system of sewage disposal. We do not advocate the use of cesspools when it is possible to use the septic tank system.

In the December 15th (1920) issue of Sanitary Engineer there appeared a description of two types of septic tanks. One of the tanks there described would be suitable for the condition of clayey soil mentioned in your letter. We refer to the combination "septic" and aeration tank indicated by Figs. 1, 2, 2, 4, and 5 in the December 15th issue of Sanitary Engineer.

"Ubel" Semi-Rotary Pump

B. & C. Floor and Ceiling Plates

Sizes $\frac{1}{4}$ " to 4" are available in stock at Toronto. These neat, attractive plates are made of superior, cold-rolled steel, heavily copper-plated, and finished in nickel-plate. The narrow pattern makes them most effective for twin connection or one pipe work. These are the most popular plates offered the Canadian trade.

Cone Top Tank Bulbs

These are splendidly made of the first quality rubber. The top is heavily reinforced; the bottom is soft and pliable. The sizes in stock are $2\frac{1}{2}$ ", $2\frac{5}{8}$ ", $2\frac{3}{4}$ " and 3". These are available in stock at Toronto.

"Ubel" Semi-Rotary Pumps

An English Semi-Rotary pump, with all the careful, conscientious workmanship of the British workman. The quality is high but the prices are competitive. A strictly "Made-in-England" product, but available in stock at Toronto.

W. H. Cunningham & Company

269 West Richmond Street, Toronto, Canada

Exclusive Agents for Plumbing and Heating Specialties

UBEL PRESSURE AND VACUUM GAUGES

"UBEL" Pressure and Vacuum Gauges are perfectly designed on scientific principles and manufactured only from the very best materials by highly skilled workers. By specialization on this particular work, "UBEL" can offer Vacuum and Pressure Gauges of the highest standard at competitive prices.

Standard Gauges

Ready for quick delivery include:

- "UBEL" Gauges for Pressure and Vacuum.
- "UBEL" Hydraulic Pressure Gauges.

Rules For Use of Warm Air Pipes

Number of Important Rules to Be Kept in Mind in Installing Warm Air Heaters

THESE rules, as issued by the National Warm Air Heating and Ventilating Association, are as follows:

1. Each warm air pipe should have an upward pitch from the heater of not less than one inch per foot.

2. The pitch of all warm air pipes should be alike. Equalize by bringing down lower into the cellar the boxes of the shorter warm air pipes.

3. When a warm air pipe in cellar is more than fifteen feet long, add one-half inch to the diameter of such pipe for each five feet or part thereof, of length in excess of fifteen feet (or, when odd one-half inch sizes of pipe are not used), add one inch to diameter of pipe for each ten feet, or part thereof, of length in excess of fifteen feet. In such case, the capacity of a riser should be increased to equal the capacity of the cellar pipe.

4. An offset in the riser pipe is equivalent to an addition to the length of the cellar pipe, and should be counted in when measuring the total length of the cellar pipe.

5. All warm air pipes in cellar or basement should be covered with non-heat-conducting pipe covering. Not less than ten pound sheathing is recommended.

6. All warm air risers should be carried up in inside partitions, wherever possible.

7. In cases where it is absolutely necessary to carry up warm air risers in outer walls, such risers should be so thoroughly protected as to be completely insulated.

8. In using double wall pipe the capacity should not be reduced.

9. A separate compartment should be made in the crown or bonnet of the surface for each extra long or winding air pipe, thus insuring a positive supply of warm air to the pipe.

10. Never use smaller than eight inch pipe.

11. When warm air pipes are taken out of the top of the bonnet of the heater, the tops of all the elbows should be on a level, so that an equal current of air can fill all the pipes.

Note: As a twelve inch elbow is so much higher than an eight inch elbow, in order to have both pipes work properly, the top of the eight-inch elbow should be as high as the top of the twelve inch. This applies to all pipes taken from the top of the heater. The same rule applies as nearly as possible where pipes are taken from the side of the bonnet.

12. Rooms on the sides of the house exposed to prevailing winds should always have one size larger pipes and registers than the same sized rooms on the sides of the house not so exposed.

13. Rooms having bay windows and considerably more than the average glass surface on the northern side of the house should have two sizes larger warm air pipes and registers than the same sized rooms without this extra glass surface on the southern side.

14. Where warm air pipes pass through the wall in the cellar, an air space around the pipes should always be left. Never mason a pipe in solid that passes through the wall in the cellar, as the wall chills the pipe and makes that pipe almost worthless.

15. All warm air pipes should have

dampers close to the heater, so that heat from them can be regulated.

16. All rising pipes in partitions or walls should be enlarged or boxed out where cellar pipes enter them. This is necessary to avoid friction and insure a rapid flow of air.

17. All rising warm air pipes running from second to third floor should always have damper above the register on second floor. Rising pipes should be wrapped with asbestos and studs lined with tin, using wire or iron lath to plaster on.

18. The friction from abrupt bends or acute angles in warm air pipes must be avoided.

19. Fireplaces in rooms having flues 12x12 inches, which is equal to one hundred and forty-four square inches, or 8x12 inches, which is equal to ninety-six square inches, or 8x8 inches, which is equal to sixty-four square inches, will in cold or windy weather pull off more air from a room than the warm air pipes can deliver. In such cases, use sheet iron throat pieces with sliding damper in fireplace flue. The ventilation can thus be regulated as desired.

20. In heating a room on the cold side of the house, or a room having a large amount of glass surface, place one register in the floor as near as possible to the furnace and place a cold air register face in the floor under or near a window and connect this cold air register by means of a separate duct to the bottom of casing, thus removing the cold air out of the room and at the same time providing a flow of warm air into the room.

21. The heater must be attached to a chimney flue of correct construction, one that will furnish sufficient draft to insure a good combustion of fuel.

22. The fresh air supply to the heater must be adequate.

Pipe Capacity—Relative Sizes of Opening Areas

In heating and ventilation, water or air distribution it is often necessary for feeders to be taken from the main header, or vice versa. The combined cross sectional areas of the branches should equal that of the main line. Areas of circles vary as the squares of their diameters.

1—Three equal branches leading from one main. 2—Two feeders in ratio of 3:2 leading from main. 3—Two elongated sections leading from round main. Suppose main pipe D in cases 1 and 2 to be 15 ins. diameter. Area of large opening equals 15 inches squared $\times .7854 = 176.715$ sq. in.

1—Area of one small pipe equals $176.715 \div 3 = 58.905$ sq. in.

Diameter (d) equals 8.66 inches.

2—Ratio of branches 3 : 2.

Area of large branch = $\frac{3}{5}$ of $176.715 = 106.03$ sq. in.

Dia. of large branch = $\sqrt{\left(\frac{A}{.7854}\right)} = 11.62$ inches.

Area of small branch = $\frac{2}{5}$ of $176.715 = 70.68$ sq. in.

Dia. of small branch = $\sqrt{\left(\frac{A}{.7854}\right)} = 9.48$ inches.

"JEWEL PIPELESS" FURNACES

The Finest One-Register Furnace on the Market

Right now we can see that the introduction of this furnace is going to make the year 1921 the banner year for our dealers, breaking all past sales records. This is only natural, because "Jewel Furnaces" have always been producers of large sales for our dealers, and the "Jewel Pipeless" contains the same high qualities that have made the name "Jewel" famous from coast to coast.

Your customers, when buying a heating apparatus, want mainly real Quality Heaters that will give good service for many years.

When you sell them a "Jewel" you sell them what they want.

All materials entering into the manufacture of "Jewel" Furnaces are highest grade and they are erected by skilled mechanics under the supervision of experts, which ensure the dealer and user entire satisfaction.

Safeguard your reputation as a furnace installer by selling your customer a "Jewel Pipeless," a furnace that is built on knowledge derived from experience.

Take another look at the illustration and ask yourself if the "Jewel Pipeless" is not the most durable, efficiently constructed, and neatest appearing furnace you have yet seen.

No other line offers you, Mr. Dealer, so great an opportunity to give to your customers the best that their money will buy.

Secure the Agency for Your Territory Now.

Making Radiation Usable

All who specify and install radiation are agreed upon one point: radiators cannot do their work when they are choked up with air and water.

The two curves are from actual laboratory tests and the same radiator, fitted with two kinds of radiator traps—one of which was the Dunham Radiator Trap—the trap that has been making radiators practically 100% hot since 1903.

You know which trap you would prefer. So would the man who pays the bill for the radiation which he rightfully expects will keep every room warm.

Making radiation usable is as commendable as the conservation of coal.

GAS

A Year Round Service

Ever stop to think how continuously the Gas Company serves you from one end of the year to another?

Not an hour—day or night—when the Gas is not available—for cooking, heating water, household heating, lighting, etc.

Few other businesses can point to continuous service of this kind. Day in and day out, Sundays and holidays, Gas is available for instant use—its quality always of the same high standard—its supply ready without delay in as small or as large quantity as you may wish. The houseseeker looks for gas outlets in every room. Remember the kitchen—cooking, lighting, incinerator, water heating. Be prepared and pipe when you build.

This is a "Q" Foot Valve

And it Just CAN'T Leak

There are more pump troubles caused by "leaky" valves than from all the wear and tear which occurs in the average life of a pump.

The "Q" valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that JUST CAN'T LEAK.

Made in sizes from 1 to 8-inch.

R. McDOUGALL CO., LTD.
GALT, CANADA

No. 2 Size Positive Circulator

The above cut shows one of the four sizes of Positive Circulator we manufacture. They stand for economy. In the installation of a Hot Water Heating System you save money by using a Positive Circulator because of the great reduction in radiation and pipe sizes required. In the maintenance of the system you save money because the heat is carried from the boiler to where it is required with very little loss. Positive Circulators are efficient. They ensure even distribution of heat throughout the system and keep the water in the radiators at about the same temperature as the water in the boiler.

Write us for details or let us show you some installations.

Williams' Improved "Vulcan" Chain Pipe Wrench

WILLIAMS' CHAIN PIPE WRENCHES have been standard for nearly half a century. Made in 8 sizes for $\frac{1}{4}$ to 18-in. pipe, entirely of drop-forged and wrought steel, with each Flat Link Chain "proof-tested" and certified. They guarantee hard and continuous service.

Williams' "Vulcan" and "Falcon" Pipe Wrenches are the *only* Chain Wrenches which offer this certified assurance.

At your dealer's. Ask for booklet.

THE CREDIT MAN of a manufacturing or commercial concern must know now the financial standing of the firms to whom his company extends credit. He has his Dun or Bradstreet.

The Purchasing Agent or the buyers of various departments must be convinced that the goods delivered are as represented in both weight and quality. They have their scales and testing apparatus.

The Advertising Man must know that the circulation claims of the papers with which he does business are justified by the facts. He has the reports of the Audit Bureau of Circulations.

Good firms invite investigation of their rating or their merchandise.

Good papers furnish A. B. C. reports to their advertisers.

Sanitary Engineer is a member of the Audit Bureau of Circulations.

"JARDINE" and "TOLEDO" Pipe-Threading Tools

Interesting Features

The Jardine and Toledo have no cams or gimcracks to get out of order, and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

The New *Westco* Tankless Water System

It is very often said that nothing is so perfect but that it may be improved.

To some extent this is true—at least we think so—so much so, that we are always investigating to discover means of improving the Westco System.

The general operation of the Westco Tankless System represents absolutely the last word in water pressure systems. Therefore, it is only in the details of construction of the system that we can effect improvements.

If you already sell Westco Systems you should write us for particulars about the improved Westco System.

If you do not sell Westco Systems you should write and find out what you have been losing by not handling this line.

For your information: The Westco Tankless Water System is now fitted with an

All-Bronze Pump and New Westco Two-Pole Pressure Switch

Write us for complete information about this pump, which has only one moving part, and for our Dealer Co-operative Plan.

Westco Pumps Limited

707 Yonge Street
Toronto, Ont.

He Didn't Know Business Was Dull!

An agent for automobiles, up in a part of the country noted for severe winters, was ordering cars from the company's sales manager all winter. It aroused curiosity on the sales manager's part. When, in mid-winter, the orders increased, the sales manager determined to investigate this unusual occurrence. He went up there.

When the sales manager told him that the other agents weren't ordering, the agent was surprised. "My customers," he said, "want their cars early in the Spring, and when they see them available they buy, that's all." He didn't know it was hard to sell cars in the winter time. He hadn't thought about it, he was too busy selling them.

More happiness, sunshine, pleasant thoughts and actual business come to the fellow who is busy all the time, than to the one who waits and worries.

Pipeless Furnaces mean extra business

EVERY pipeless job you handle is so much "velvet." It doesn't cut into your sales of piped furnaces one iota. It opens up a new market for you, and it offers quick, clean profit.

Somebody in your town is going to get the cream of this business in the next few months. Why not you?

You're sure of getting sales—reputation—satisfactory profit if you handle the pipeless furnace which has a lot of talking points—all of real merit.

The "Hecla" Pipeless Furnace dealer can outmatch competition when he begins to talk of Patented Fused Joints, Steel-Ribbed Firepot, Cast-Iron Combustion Chamber, Circular Waterpan, Individual Grate-Bars—and all the other "Hecla" features.

And you take no chances when you recommend the "Hecla" Pipeless. Installed according to our plans, we guarantee it to give absolute satisfaction—and our guarantee is the strongest you've ever read!

Moreover, the "Hecla" Pipeless is a proven success. Out of all the hundreds installed we have not received a single complaint.

Don't pass up the extra business the "Hecla" Pipeless offers you.

If only to satisfy your curiosity—send now for: (1) Booklet of photographs and testimonials; (2) Sample enquiry forms for sketch plans; (3) Our famous consumer booklet, "Buying Winter Comfort"; (4) Full facts on the unique and valuable selling and advertising assistance we give to "Hecla" Pipeless dealers.

Simply tear out this page — write your name and address in the margin, and mail.

The Things I See When I Am Seeing Things

By Booster Binx

When I speak of seeing things, I don't mean the things you mean.

I mean the things a fellow sees, when he is wide awake and his brain clear as a crystal.

Take that Burnham Boiler for example.

When I open the fire-box door and look in; it's not grates and fire surface I see.

To me it's just like opening the hall door of a cosy, comfort home and looking in at its contentment and happiness.

Sometimes I see Dad shaving in a bathroom that's warm as toast. So warm and toasty that he starts to whistle and cuts himself.

Then again I see Mother sitting in comfort close to a snow scene window, and darning the knees of little Willie's stockings.

And then again it's evening time, the lamps are lighted, and supper over.

While Dad smokes and reads his paper, Mother is looking through a seed catalog and making a list of the flowers she is going to grow.

Always I see cosy comfort.

Always it is plain as day that our Happy Solution is the happy solution.

And by the way, have you one of the Happy Solution books? If not, send at once for one. If you know some folks who want to get some sound sense on heating told in an interesting, chatty like way, send along their names; at once a Happy Solution will go to them.

And another thing, when you start to sell a Burnham, don't just sell a boiler.

Sell them Burnham Cosy Comfort.

Next time I want to tell you about a dangerous Boiler Bolshevik I know.

Electric Weld

RANGE BOILERS

In Step

With the March of Progress

In this age of progress no industrial product can stand still and survive. The improvements of the age are demanded by a well-informed public that insists on having all the improvements that science and invention can provide.

Electric Welding produces Range Boilers that are practically a continuous shell. Electric Welding, in effect, eliminates all seams and forms a solid union of the metal. There are no rivets or rivet holes to leak; the shell is not weakened by punched or drilled holes.

Sanitary Engineer

Good Business

We are now in times when business is to be gotten only by spending plenty of energy and thought in securing it.

The Plumbing and Heating trade, however, has many opportunities for the development of business.

For instance, what do we lack in Canada to-day more than sanitary conveniences, and what is more important to the health of the public than proper sanitation and adequate heating facilities?

It will pay you to follow Sanitary Engineer from now on more closely than ever. Every successful business man must keep his fingers on the pulse of his business.

The editorial contents is replete with ideas for securing business and holding customers and in the advertising pages you will find the products of advertisers who publicly "dare risk on them the honor of their names" in bringing the quality and service of their goods to your attention—watch the advertising pages.

Sales Built on Confidence

Morrison Gauges

include gauges for every conceivable purpose — for indicating or recording:—pressure, temperature, altitude, revolutions, etc.

These well-known, reliable gauges sell well because they are regarded by mechanical men as standard.

There is hardly a requirement for gauges that you cannot supply with Morrison Gauges. With the Morrison line you can make a sale out of inquiries.

Write to-day for catalogue of the reliable Morrison products. It will pay you to stock and sell the famous Morrison line.

James Morrison Brass Mfg. Co., Ltd.

93-97 Adelaide Street West, Toronto

Allpriser Service consists of a flexible, leather bound book 7 x 9, of 150 loose-leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest change.

It Pays for Itself

With the actual cash Allpriser saves the plumber it will pay for itself in a very short time. Allpriser is a preventive for losing money through mistakes in pricing. It gives the latest changes in buying and selling prices, eliminates errors, saves time and worry. The plumber can't do without it what he can do with it—namely, keep his profits intact. Write to-day for interesting literature and sample sheets.

Business is in Proportion to Your Displays

The Public doesn't know you are in business until you hang out a sign. Except in emergencies they are not much interested then.

But construct good, generous windows for your establishment; put in a display of handsome fixtures, show a finished, per-

fectly-appointed bathroom, and what a difference in the interest!

The desire of possession soon turns "Passers By" into "Comers In," and what is the natural result?

Displays are the selling medium of every merchant. Why not then for the Merchant Plumber?

To Establish Trade Extension Bureau

Definite Steps Taken at 10th Annual Convention of Ontario Society D.S. & H.E. to Form Canadian Bureau to Educate Trade—Goodly Representation of Manufacturers and Wholesalers Present—To Assist Minister of Labor in Framing Ontario Plumbing By-laws.

MORE harmonious relations between various branches of the plumbing and heating trades and definite steps to raise the general status of the trade by educational means were features of the tenth annual convention of the Ontario Society Domestic, Sanitary and Heating Engineers, held in Toronto. The morning session of the first day opened with a meeting of the directors and executive board in the society's premises at 2 College street. Reports of the various officers were dealt with and prepared for presentation to the general convention and plans laid for the entertainment of the delegates.

At the afternoon session a conference with manufacturers and wholesalers of plumbing was held. This conference was for the purpose of bringing about definite action in regard to the proposal for a Canadian Trade Extension Bureau along similar lines to that now in operation in the United States. This matter was brought up at last year's convention by T. J. Minnes, Brantford, Ont., who was then president of the society. In his presidential report Mr. Minnes states that after good progress had been made early in the year, following the appointment of a joint committee of the master plumbers and representatives of the manufacturers and wholesalers, this was followed by a lull owing to the fact that certain difficulties arose. Mr. Minnes stated that further progress was made toward the end of the year and he has reaffirmed his faith in the movement.

An Educative Policy

Mr. Minnes pointed out that the principle of trade extension was an educative policy designed to educate everyone participating in the trade; to make better business men of them; to teach them to conduct their business under better conditions than in the past, so that they may command the respect of the public; also to give the public better service than in the past, and educate the public to use good plumbing goods. Ultimately, of course, this would benefit the manu-

THOMAS M. MAXWELL,
Toronto, formerly Treasurer of the Ontario Society, Domestic Sanitary and Heating Engineers, who was elected President of the society at the 10th annual convention in Toronto.

facturers and wholesalers, for the reason that there would be more and better plumbing goods sold. Thus the co-operation of the latter branches of the trade had been sought.

After considerable discussion of details it was decided to appoint a committee with power to establish a Trade Extension Bureau in Canada. This committee is composed of the following members: T. J. Minnes, Brantford, president; L. L. Anthes, Anthes Foundry Company, Toronto, treasurer; James Cunningham, Welland, Ont.; Roy Belyea, Toronto; and G. F. Frankland, Toronto, secretary.

It is understood that a sum of money has been raised by contribution from manufacturers and wholesalers and that immediate steps will be taken to secure a permanent organization. Mr. Minnes stated to *Sanitary Engineer* that the committee expected to have a complete organization with a managing secretary appointed within a period of about five weeks.

Among the firms represented at this

conference were the following: Messrs. F. Armstrong, Port Hope Sanitary Mfg. Co.; Wallace and Crawford, Standard Sanitary Mfg. Co., Toronto; Robb, Empire Brass Mfg. Co., London; Owston, James Robertson Co., Toronto; Wilkes, Canada Pipe & Steel Co.; Hutchinson, The Mott Co., Montreal; F. Stinson, Galt Brass Co.; L. Anthes, Anthes Foundry Co.; Hobbs, Ruud Mfg. Co.; Vowell, Crane, Ltd.

Address on Publicity

Following the conference on trade extension, James Fisher, of The James Fisher Advertising Agency, Toronto, gave an address on "Publicity and Co-operative Advertising for the Plumbing Industry."

On the principle that co-operation should be the keynote in business rather than competition, Mr. Fisher advocated a co-operative newspaper and magazine campaign to widen the market for plumbing goods. He pointed out that sanitary plumbing is a basic industry and that, on that account, any money spent on a co-operative effort would do permanent good to the industry. He contended that co-operative advertising would not only enlarge the basic market by creating new users, but would also reduce the cost of selling by supplementing personal effort and making it more effective. It would, he said, foster public goodwill to those engaged in the plumbing industry by pointing out the service of sanitary engineering to the community and the relative cheapness of that service. In Mr. Fisher's judgment co-operative advertising should be financed by the manufacturers and jobbers, as it would create a demand for their goods and thus help to place their industries in a stronger and healthier position.

The evening session of the first day was spent at the plant of C. A. Dunham Co., Ltd., 1535 Davenport Road, Toronto, where a lecture, illustrated by lantern slides, was given by E. T. Flanagan. The lecture was on the subject of "Heat-

ing" and is outlined fully elsewhere in this issue. A smoker and social hour was enjoyed by the delegates during the evening.

The morning session of the second day of the convention was opened to the delegates and officers and committee reports were received. These are outlined fully in this issue.

Assistance in Plumbing By-laws

In the general business discussion a communication was read from the Minister of Labor of the Province of Ontario in which the assistance of the plumbing trade and the trade papers was asked in connection with the plumbing by-laws for the province which are now being framed. It was pointed out that the Minister of Labor is comparatively

new at this work and should have the utmost support. A resolution was passed asking the trade papers to do what they can to see that the members of Parliament and boards of health are supplied with copies of their papers in order that those officials might be kept informed on developments in the trade.

John Wright, chairman of the committee on sanitation, pointed out that over 700 copies of the proposed regulations had been sent out to master plumbers in the province, so that they would be acquainted with the law before it is enforced and have time to make suggestions.

Standardization of Equipment

Discussion also touched lightly upon the question of standardization of equipment and it was thought that much pro-

gress had been made along this line in recent years by manufacturers who have provided a number of new pieces of equipment which have overcome some of the difficulties experienced in the past. These had to do with vents in high buildings, etc.

At the afternoon session the annual election of officers and committees took place and the new officers, whose names are shown elsewhere, were elected without dissension. The election was followed by the address on "Operating Costs and Profits," by Messrs. H. A. Weinraub and David E. Norwich, as outlined elsewhere.

The convention was concluded with a banquet at Bingham's "Downtown" in the evening, a full report of which appears in this issue.

Progress in Trade Extension Movement

Directors Considered Wage Proposals in Various Ontario Cities—
Want London Represented—Encouraging Reports From
Niagara Falls

Report of Retiring President, T. J. Minnes, Brantford, before 10th Annual Convention Ontario Society D. S. & H. E.

A GAIN I have the honor of presenting to you a report of my stewardship of the affairs of your society as entrusted to me, and I hope my actions will meet with your approval.

Your directors have had but one meeting throughout the year having a full attendance, although there have been several meetings with a partial attendance of your directors.

The greater part of our work for the past year has been in connection with trade extension, which we have found to be a difficult proposition to handle owing to the different interests involved in such an organization, and the different angles requiring consideration which were continually cropping up; we have found many obstacles and prejudices that had to be overcome, and with no little difficulty, I assure you. The trade extension movement made rapid progress in the first part of the year, after which there was a decided lull but, after persistent efforts, I am pleased to report that the outlook is much brighter. I do not wish to dwell upon this subject in my report as this issue will be more thoroughly gone into at your present convention. I wish to express myself clearly as being of the opinion, or rather the firm belief, that trade extension conducted along proper lines is the greatest thing for the betterment of the plumbing industry in all its branches than any other movement that could be attempted; and the more I have studied it the more firmly I am convinced. No doubt you are all aware of the investigation made by ten of your members who visited Evansville, Indiana, where they visited the American Trade Extension Bureau and secured valuable information as to

T. J. MINNES,
Retiring President Ontario Society D. S. and H. E., who has been elected President of the committee formed to establish a Trade Extension Bureau in Canada.

its workings. Reports from this committee you will have an opportunity of hearing in convention.

Sub-directorate

I regret that the sub-directorate which was appointed at your last convention to look after the different districts did not function. This is regrettable indeed, and I am still of the opinion that the idea is a good one if the members appointed to perform the task outlined to them would sacrifice a little time and energy in helping to build up the society in their

respective districts. No doubt it is clear to you that it is impossible for your directors to spend enough time visiting the many cities and towns organizing the trade, and revisiting them to hold their organization to a proper standard. Your directors called a meeting in Hamilton in April last to endeavor to form a standard rate of wages and conditions for the Province. This meeting was well attended by members from Stratford through to Niagara Falls, and I am glad to report that this meeting was the means of keeping the wage question within reasonable bounds and averting labor difficulties in some parts of the Province; and I would suggest that the question of wages and agreements be brought up at this convention.

No London Members

I wish to call your attention to the fact of there being no membership from London in our society. This is regrettable indeed, and would suggest that some means be taken to gain some members from this city. It has been well represented in the past and there is no good reason why it should not be represented in the future.

The members of the trade in Hamilton have not seen fit as yet to support your society as it is well able to do, although your directors have made reasonable efforts to secure their membership. The effort, if continued, will, I feel, be fruitful of results as they have shown a sympathetic feeling toward this society.

Encouraging Report From Niagara Falls

Your directors have been in communication with the craft in Niagara Falls.
(Continued on page 19)

Need for Real Co-operation is Evident

Team Work Which Begets Confidence is Needed in Plumbing Industry—Considerable Progress With Hamilton Craft—Niagara Falls and Border Cities Also Coming Together

Report of Secretary G. F. Frankland, before 10th Annual Convention Ontario Society D., S. & H. E.

ON this the occasion of the tenth annual meeting of the Ontario Society of Domestic, Sanitary and Heating Engineers, it is with considerable pleasure that I submit for your consideration my report of the society's affairs for the past year. For, gentlemen, this marks a decade in the life of our society. Not very long ago, as one looks back to the year 1910, when, through the efforts of a few who are still spared to us, the foundation was laid for our society, so that in 1911 we became an incorporated institution in the Province of Ontario, with a view to promoting the business of heating and sanitation, to organize those persons who are qualified therein in order to allow these trades to insure a standard of efficiency for the protection of the public and for the persons engaged in such business.

The same principles that guided the action taken in 1911 are still maintained by those in charge of the affairs of the society, to-day, and will, I hope, be continued in the future. To secure the enactment of a provincial plumbing code for Ontario was one of our chief aims, and while this still remains in abeyance we have seen a most satisfactory proposed provincial regulation compiled and approved by the provincial health authorities and adopted by numerous municipalities throughout the province, as our good friend, Mr. John Wright, chairman of the Sanitary Committee, will enumerate.

Changing Field of Operators

Looking backwards one is forcibly struck with the ever changing field of operators that engage in our business, many here to-day and gone tomorrow, others who last several years, and seemingly make no great progress in a commercial way, while the few who have been established for some time are only able to continue their activities by the closest and keenest competition that one can imagine.

To overcome this ever-changing and incessant upheaval of inexperienced tradesmen in business affairs and to bring about if possible a more settled and prosperous business requires the co-operation of all engaged in the industry, including the journeymen, wholesalers, manufacturers, and ourselves. By co-operation I do not mean the usual kind of stand-back spirit and let the other fellow do it, but a whole-hearted effort on the part of everyone who wants to improve the industry for the sake of their fellowmen. Team work and co-

operation that beget you confidence in the other fellow; something to build with, not tear down, as it has been in the past. Co-operation begets construction, and that is what our calling requires and lots of it. The idea that might is right has proved itself false in the most glaring lesson of the world's history, and co-operation spelled its downfall. To-day in our industry we have on every hand evidence of that old spirit of "to the fighters belong the spoils," and in its wake all you find is destruction of the worst kind, so bad in our particular case that only disaster is the result for one and all.

THOMAS E. ARTHUR,
of Drake, Avery Co., Hamilton, Ont.,
elected Vice-President of the Ontario
Society, Domestic, Sanitary and Heating
Engineers, at the 10th annual convention in Toronto.

In the motto of the Canadian Society of D. S. and H. E., "One for all and all for one," we express the true spirit of co-operation, and not until we have a mutual understanding all down the line, including manufacturers, wholesalers, ourselves and labor, for what is good for one is likewise good for the others, and vice versa, can we expect an improved commercial condition for our craft.

The question of publishing a bulletin or association organ is one whereby much good could be done and a closer spirit of co-operation created throughout the craft. The need for a medium of this kind is very great, and while trade papers do a wonderful good work in the interests of the industry as a whole, the

more direct benefit desired by the society cannot be obtained unless we are able to establish the policies that are essential to the welfare of the society's members.

Progress in Hamilton

During the past year considerable progress was made with the Hamilton craft, there now being sufficient members in Hamilton to form a local committee.

The border cities have also shown most favorable progress and arrangements are under way to bring the trade together in Niagara Falls.

The local committee situation is one that requires some consideration as to the necessity of having all local resolutions, rules, or agreements submitted to the directors for ratification. This is more forcibly brought to your attention by the recent action of the Border Cities' Association, who, of course, are not a local committee of the Ontario society.

Convention of Canadian Society

The Canadian Society of Domestic, Sanitary and Heating Engineers will meet in Quebec City this year for its twenty-fourth annual convention on June 6th, 7th and 8th. Arrangements for a boat trip are under way and a number have already signified their intention of going this way. A visit to the ancient Capital at this time affords our members an opportunity not to be missed to view the many landmarks and historical features that connect this wonderful old city so closely with the early history of Canada.

I thank one and all for their kindly attention to correspondence, etc., and trust that business will quickly gain its usual stride, and with best wishes for the success of our society and its members.

Montreal's New Hotel

Montreal.—Work on Montreal's new hotel is expected to commence this month, the contract now being awarded. The name of the firm whose tender has been accepted is withheld, pending the conclusion of the necessary legal formalities.

It is understood that Canadian labor and Canadian material will be used in the construction as far as possible and some 2,000 men will in all probability be employed, the majority of these drawn from Montreal and district.

The building cost is estimated at \$6,000,000. The building will contain 1,050 rooms, 30 stores and 40 offices.

St. Catharines Joins Ontario Society

Vice-President Jas. H. Cunningham, Welland, Ont., Attended Meetings to Discuss Industrial Conditions and Trade Extension.

Report of Vice-President J. H. Cunningham, Welland, Ont., before 10th Annual Convention Ontario Society D. S. & H. E.

"AS vice-president of the Ontario Society of Domestic Sanitary and Heating Engineers, I attended a conference of representatives of the trade held at the Connaught Hotel, Hamilton, on April 22nd, 1920. Representatives were present from Stratford, Guelph, Brantford, St. Catharines, Hamilton and Toronto. This conference was held to consider existing industrial conditions pertaining to the plumbing and heating industry. The result of this conference is contained in the president's report.

"I attended a conference of a joint committee of representatives of the Ontario Society of Domestic Sanitary and Heating Engineers and representatives of the manufacturers and jobbers, held in Toronto, April 27th, 1920. The purpose of this meeting was to talk on matters of trade extension in the plumbing and

heating industry. After an interesting discussion the meeting adjourned to meet at a future date for more definite action.

"I also attended a joint meeting of the directors of the Ontario Society of Domestic Sanitary and Heating Engineers and representatives of the manufacturers and jobbers, held in Toronto, May 18th, 1920. The purpose of this meeting was to further discuss trade extension. The result of this meeting is contained in the president's report.

"I attended a meeting of the Master Plumbers' Association of St. Catharines on March 30th for the purpose of having the members of this association join up with the Ontario Society. After a discussion on the benefits of belonging to the parent body a resolution was passed that the St. Catharines society become members of the Ontario Society of

ONTARIO SOCIETY D. S. & H. E. OFFICERS, 1921-22

Officers elected at the 10th annual meeting of the Ontario Society of Domestic, Sanitary and Heating Engineers, Toronto, for the year 1921-22, are as follows:—

President—Thomas M. Maxwell, Toronto.

Vice-President — T. Arthurs, Hamilton, Ont.

Treasurer—H. Weinraub, Toronto.

Secretary—Garrett F. Frankland, Toronto.

AUDITORS—Arthur E. Paddon, Windsor, Ont.; Fred H. Gentle, Toronto; Harry Peter, Stratford, Ont.

TRUSTEES—William Mansell, Toronto; Harry Mahoney, Guelph; G. F. Frankland, Toronto.

CHAIRMEN OF COMMITTEES:
Sanitary—John Wright, Toronto.
Heating—W. F. Clifton, Toronto.
Arbitration—H. E. White, Brantford, Ont.

Legislation—Norman Swanston, Toronto.

Apprenticeship—Geo. R. Baker, Toronto.

Educational—Gordon Stewart, Hamilton, Ont.

Examination Board—The Directors.

BURNETT-LARSH MFG. COMPANY CHANGES NAME AND INCREASES CAPITAL STOCK

The Burnett-Larsh Mfg. Co., Dayton, Ohio, has changed its name to the Duro Pump & Mfg. Co., according to advices from President C. E. Burnett. The company has also received authorization from the secretary of the state of Ohio to increase its preferred capital stock to \$600,000, and to issue 20,000 shares of no par value common stock. The company has enjoyed exceptional progress since its organization early in 1916. Its officers are: President, C. E. Burnett; vice-president and general sales manager, C. A. Kuebler; vice-president and secretary, R. S. Shuey; works manager, H. J. Hunt.

Ottawa, Ont.—Plumbing and heating contracts for addition and alterations to club house for G.W.V.A., Cartier and Cooper Sts., are awarded to Holloway & Son, 373 Somerset St.

* * *

Toronto.—Contract for erection of residence costing \$20,000 for H. T. West, 43 Victoria Street: Plumbing and heating, Fiddes & Hogarth, 122 King Street East.

Enjoyable Reunion at Annual Banquet

Officers Active in Past Years Give Present Officers Benefit of Their Counsel—"Relative Values of Plumbing Materials Lower To-day Than Most Other Commodities"—"Epidemics Start at Same Time as Corporation Control of Waterworks"

AN enjoyable reunion of those interested in various branches of the plumbing and heating trades was held Friday evening at Bingham's, Ltd., Yonge St., Toronto, the occasion being the annual banquet of the Ontario Society, Domestic Sanitary and Heating Engineers in connection with the tenth annual convention.

George Clapperton, Bennett & Wright, Toronto, was chairman. Seated to one side of him at the head table were Thos. Maxwell, Toronto, the new president of the society; T. J. Minnes, Brantford, retiring president of the society; F. A. Dallyn, C.E., Provincial Department of Health; John W. Bruce, secretary of the Plumbers' and Steamfitters' Union, Toronto; H. Weinraub, Toronto, the new treasurer of the society, and Kenneth B. Allison, Toronto.

To the other side of the chairman were seated Fred Armstrong, Port Hope Sanitary Mfg. Co.; Roy Belyea, Toronto; F. R. Maxwell, Toronto; J. Bell, the Warden King Co., Toronto; W. J. Wall, the Mott Co., Montreal; D. A. McLulich, Toronto. Alderman Ryding sent his regrets at his inability to be present.

Entertainment

A number of splendid entertainment features were provided by Messrs. Lee and W. J. White, these interspersing the courses at meal time and the brief addresses which followed. At the conclusion of the generous repast cigars were passed and the second part of the entertainment entered upon during which a number of brief addresses were given by those interested in the society. This social event is always looked forward to with much interest as an opportunity is afforded those who have been actively connected with the work of the society in years past to reaffirm their interest and to meet with old friends. Their counsel in meeting to-day's problems is always valuable as well. Thus the spirit of good fellowship and kindred interest which has always characterized former banquets was evident in full measure at the social evening held in connection with this year's convention.

The first toast was to the King, and was proposed by the chairman, George Clapperton.

Relative Values of Plumbing Materials

A toast to our Province was proposed by Fk Armstrong. In his remarks, Mr. Armstrong diverted a little from the subject to point out the relative values of plumbing materials to-day, compared

with prevailing values of most other commodities. He pointed out that the facts showed adequate reason why drastic reductions could not be made in prices on plumbing supplies. He pointed to the futility of becoming hysterical and also to the futility of waiting for a lower market before advocating building operations to be undertaken.

One of Mr. Armstrong's witticisms concerning the Ontario Government caused much laughter. This was a humorous comparison of the "good old days" in the province of Ontario with

H. WEINRAUB,
Acme Plumbing Co., Toronto, who was elected Treasurer of the Ontario Society, Domestic Sanitary and Heating Engineers, at the 10th annual convention in Toronto.

the present when the farmers who are in control of the Government milk cows on the front steps of the Parliament Buildings.

Our Society

A toast to Our Society was proposed by F. R. Maxwell, Toronto, who, in a few brief remarks recalled the time when he had been instrumental in organizing both journeymen and master plumber associations, many years ago. The keynote of his remarks was that all should organize and co-operate for the common good, irrespective of the branch of trade represented.

The new president, Thomas Maxwell, Toronto, responded to this toast, stating that the honor done him in conferring upon him the presidency of the Ontario Society had so taken the wind out of his sails, coupled with the busy afternoon of campaigning, that he was taken a little unawares. He promised that if applied effort would accomplish any-

thing, that the society would make good strides in the forthcoming year.

L. L. Anthes, Anthes Foundry Co., and John W. Bruce spoke to the toast to The Industry.

The toast to Our Guests was proposed by George Baker, in a few well-chosen remarks, and was suitably responded to by Harry Mahoney, Guelph, Ont.

Plumbing in Toronto Schools

J. Bell, the Warden King Co., Toronto, and associated with the Board of Education, spoke briefly of the efficiency of plumbing and heating installations in the schools of Toronto. He stated that these installations were superior to those in schools visited on a recent trip to the United States. He also outlined the work being conducted in Toronto schools in the interests of technical education.

W. Meadows, sanitary inspector, Toronto, and Mr. Owston, James Robertson Co., also made a few brief remarks. T. J. Minnes, Brantford, spoke briefly as retiring president of the association, mentioning his new office of president of the organization formed to establish a Trade Extension Bureau in Canada. Mr. Minnes has been actively at work in the interests of such a bureau in Canada for some time and he deserves the honor of being head of the first organization formed to establish such a bureau. Mr. Minnes emphasized the need for education but pointed out, by the use of a parable, that the higher education was not necessary to make a man a good producer.

F. A. Dallyn, C.E., Speaks

An interesting outline of the work of the Provincial Board of Health was given by F. A. Dallyn, C.E., Provincial Sanitary Engineer. Mr. Dallyn mentioned the fact that research work has shown that epidemics generally started at the same time as corporation control of waterworks was established. He pointed out that it was his belief, borne out by figures, that the condition of water supply was a controlling factor in the spread or elimination of epidemics, coupled, of course, with sanitary conditions.

Orillia, Ont.—Herbert Caswell is awarded general contract for construction of sewer costing \$6,800 for town.

* * *

St. John, N.B.—F. N. Brodie, architect, 42 Princess St., is preparing plans for a school to cost \$175,000. Tenders will be called shortly.

Development of Steam Heating Principles

Functions of Radiator Traps—Various Classes of Radiator Trap Systems—Vapor or Return System Divided Into Three Sections.

Address by E. T. FLANAGAN, of C. A. Dunham Co., Ltd., Toronto, before 10th Annual Convention Ontario Society D. S. & H. E., Toronto

A LECTURE on the development of various principles of steam heating was delivered with the use of lantern slides by E. T. Flanagan, of the C. A. Dunham Co., Ltd., Toronto, to the delegates to the convention of the Ontario Society, D. S. and H. E. The lecture, given at the company's plant, was as follows:

It has only been a few years since the mention of steam heating would bring to the mind of the average person sizzling air vents, pounding, thumping and cracking in radiators and piping. The old-fashioned one- and two-pipe steam systems had this unsavory reputation due to the fact that their construction was such that it was impossible to keep the steam from coming in contact with the condensed steam or condensation, with the result that noise would ensue. The air valve on the radiator was more or less unreliable, with the result that the air contained in the heating system would remain in the radiators and thus prevent thorough circulation in that particular radiator. With the one-pipe system of heating the condensation had to pass from the radiators back to the boiler through the same pipe that the steam passed through on its way to the radiators. This necessitated in the first place an exceptionally large riser pipe and even with this precaution a certain amount of trouble would ensue, due to the water and steam coming in contact with each other while flowing in opposite directions.

With the advent of the two-pipe system, use of hand valves on each end of the radiator and an air valve on the radiator did not improve the situation very much because the steam could pass through the return pipe from the radiator into the return end of another radiator and thus interfere with the condensation passing from that radiator. There were numerous opportunities for trouble and the best of care during installation could not remove these inherent weaknesses.

The Solution

The final solution of this inefficient method of heating was the application of a radiator trap on the return end of the radiator. The radiator trap would pass water and air but closed off when steam came in contact with it. As soon as a reliable radiator trap came on the market, steam heating began to be recognized as the last word in modern heating. The radiator trap system removed all possibility of the steam coming in contact with the condensation, with the

result that the condensed steam or condensation would pass quietly from the radiator through the return system back to the boiler without in any way coming in contact with the steam. At the same time this trap would pass the air from the radiators, which eliminated the necessity of an air valve on each individual radiator.

A radiator trap to perform its functions properly must be:

- 1st—Positive in motive force, yet sensitive;
- 2nd—Large in capacity;
- 3rd—Simple in construction. and
- 4th—Durable.

Mr. Flanagan described the radiator trap made by his firm as designed with a flat valve working against a flat seat. The body of the trap is very shallow; the disc is flat with shallow corrugations. The trap remains wide open as long as water and air are in the radiator but throttles down as soon as steam comes in contact with it until the opening through the trap is sufficiently reduced to permit nothing but the condensation to pass through it. This trap permits absolutely no water to accumulate in the radiators and at the same time if the return piping were open at any given point, it would be found that absolutely no steam was present in the line.

As the natural tendency for steam is to rise, it was found that the supply to the radiators if placed at the top had the effect of producing easier and quicker circulation through the radiators, as the cold air would drop down and out through the trap quicker under this arrangement than it could with the supply connected to the bottom of the radiators.

The quick opening feature of the radiator valve made by this firm, whereby the valve is opened or closed with less than one turn of a lever handle, making the valve a great improvement over the old-fashioned wood wheel valve requiring half a dozen turns to open or close, was also described.

Classes of Radiator Trap Systems

Radiator trap systems can be divided into two general heads:

First—Low pressure vapor or return systems.

Second—The vacuum return system.

The vapor or return system can be subdivided into three heads:

The home heating system, which uses an air eliminator on the end of the return for venting the air;

The return system, which uses a re-

turn trap on the end of the returns; or

The return pump system using an electrically driven automatic condensation pump.

With these various systems, the method of piping and the manner of connecting the traps and valves are the same in every case. The nature of the building determines whether an air eliminator, a return trap or a condensation pump will be used on the return end of the system. The vacuum system incorporates the use of a vacuum pump on the end of the returns, an electrically driven vacuum pump being used if the pressure on the boiler does not exceed 10 pounds. When high pressure is carried on the boiler, a steam driven vacuum pump is then necessary.

If the steamfitter when installing a system as described will use care to get a positive fall in the right direction on all piping, he has eliminated 90 per cent. of the possibilities for trouble. A properly installed system circulates quietly on a pressure, as a rule, not exceeding 3 or 4 ounces and the flexibility in operation makes it a system which can be installed in the smallest residence or the largest office building with absolute assurance of satisfaction to all concerned.

PLUMBING FIRM PAYS DAMAGES

Montreal.—In an action he had taken claiming \$3,500 from T. Latourelle and Sons, Ltd., for injuries received while in their employ, James Howard was given judgment by Mr. Justice Martineau in the Superior Court, for \$670 and the costs.

Latourelle and Sons, Ltd., had contracted to instal the heating system in a building situated at 325 Bleury Street, and workmen had placed different sets of radiators in different parts of the building. One of these fell upon Howard causing him serious injury. He attributed responsibility to the Latourelle Company because the radiator, he said, was negligently placed against the wall, and in such a position that it was apt to slip.

Latourelle and Sons contested the claim and pleaded that if the radiator was in a dangerous position it was because somebody interfered with it after it had been deposited by defendant's workmen.

Justice Martineau said defendant was responsible unless he could prove that the accident was caused by a fault to which defendant was an absolute stranger. In the instance no such proof had been advanced for the defence.

Advise Extension of Apprenticeship Course

Encouraging Results From Course for Apprentices in Toronto
During Past Year—High Average Standing in Examinations—
Scholarships are Granted

Report of G. Clapperton, Chairman of the Apprenticeship Committee before 10th Convention Ontario Society D. S. & H. E.

JANUARY 14, 1920, marked the beginning of a new era in the training of apprentices in Ontario. Through the efforts of the Apprenticeship Committee of the Toronto Society and with the hearty co-operation of the Technical School authorities, a new course of study was added to the curriculum of the Technical School evening classes designed to meet the needs of the apprenticed plumber and steamfitter.

This course was drawn up by the school authorities along lines suggested by the Apprenticeship Committee and in order to show their interest and to get the movement off to a good start they appointed the best of their regular instructors to take charge of these classes. Drafting, which included both drawing and plan reading, mathematics, physics and practical work composed the time-table; one hour each week being allotted to each subject.

Make Lessons Attractive

The principal of the night classes in his instructions to the teachers exhorted them to make the lessons as attractive as possible and to stress the practical application of each point in order to hold the interest of the boys. This principle was adhered to throughout the course and in spite of the late start and the disorganizing of the classes by the influenza outbreak, much valuable work was accomplished and a good foundation laid for the following year.

In October, 1920, the course was opened again and so numerous were the registrations it was necessary to separate both the plumbers and steamfitters into two further divisions with between twenty-five and thirty boys in each. Had it not been for the scarcity of work which prevailed during the past winter, when many of our boys took up other employment temporarily, 1920-1921 should have been a banner year for the course. As it was, at the annual examinations, which were based on the work covered during the year, over 40 per cent. obtained a grading of 75 or over out of a possible 100, and of those who wrote on the examinations, there were not more than half a dozen who obtained less than the minimum number of marks required to pass. This, we feel, is very creditable to the trade, and if our apprentices are encouraged to attend these classes during the entire period of their apprenticeship, it should result in their becoming, at the expiration of their time,

sanitary or heating engineers in the fullest sense of the title.

Scholarships

Regularity of attendance at these classes on the part of the apprentice is of vital importance if he is to derive the maximum benefit therefrom, and

GEO. CLAPPERTON,
whose report to the 10th convention, Ontario Society D. S. and H. E., as chairman of the committee on apprenticeship is presented herewith.

with this in mind, the Toronto association founded two scholarships of fifty dollars, one for each trade, to be awarded to the boy who showed the greatest all round improvement in his work during the term. This method of awarding the honor rather than awarding it to the student making the highest percentage, placed all boys on an equal footing and was found very effective in maintaining a voluntary regular attendance. As a further check, the secretary of the association was furnished with a copy of the monthly attendance record by the school authorities, which he forwarded to the various employers, with the request that they bring pressure to bear on any delinquents, and between the two methods a good attendance at all classes was maintained without great difficulty.

While this movement is yet in its infancy and still has many corners which

will be rounded off as we gain experience, yet so much apparent good has already been accomplished, and the possibilities for even better results are so evident, that we would strongly recommend that similar classes be inaugurated in all cities throughout the Province where the necessary facilities are available.

PROGRESS IN TRADE EXTENSION

(Continued from page 14)

and the reports coming from this quarter are encouraging. With a little further effort no doubt they will also see their way clear to support the Ontario society.

You will notice by the treasurer's report that we have maintained a bank balance. Our society should have a greater revenue to allow of expansion of work. The lack of capital is a handicap which is felt at times, and I have no suggestion to make as to the means of increasing the revenue of this society at this time.

I take this opportunity of thanking the members of the Ontario Society of D. S. and H. Engineers for the honor they have bestowed upon me by electing me their president for the past year. I also wish to thank the members of the Toronto society for their help and co-operation in the many problems we have had to deal with. My term of office has been a pleasant one as well as one of education and inspiration; it has also been the means of my making the acquaintance and friends of men that are showing a spirit of unselfishness and good-will to the plumbing trade in general. I anticipate with pleasure the happy moments in the years to come while looking back at the time I had the honor of being president of your society.

(Signed) THOS. J. MINNES,
President O.S.D.S. & H. Engineers
1920-1921.

PLUMBERS MAKE CONTRACT

Montreal.—A contract has been signed by the Master Plumbers' Association and the National and Catholic Plumbers' Union for the forthcoming season. The terms of the contract are the same as last year, the wage being fixed at 75 cents an hour for first-class plumbers and steamfitters, and 70 cents for those of the second class, and 60 cents an hour for helpers.

Some Important Sanitary Legislation Suggested

Relations of Sanitary Committee With Ontario Government Concerning Plumbing Regulations—Report re Effect of Drain Air on Pipes—Sanitary Regulations Should Be Enforced by Housing Committee—Suggest Regulations re Minimum Heat.

Report of John Wright, Chairman of the Legislation and Sanitation Committee, before 10th Annual Convention Ontario Society Domestic, Sanitary and Heating Engineers

GENTLEMEN: In presenting my report today as chairman of this society, an honor which has been conferred upon me by you through six successive terms, permit me to express my keen appreciation of your confidence in me and the honors conferred by your votes in the past.

In laying down the burdens of office I shall try to be brief in expressing not only my sentiments, but in giving you a statement of some of the work that has been done in the past year.

This society has evidently made itself felt in public affairs and has produced an impression which has been finding expression in journals, mostly connected with public health work, during the past two years.

It is recognized in all cities that the care of the health of the people is a little outside other things and the laws are rightly more drastic in respect to this.

Common sense is the ability to judge values, to know a great thing from a small one. So at the commencement of the year 1920, after the grand campaign which our representatives put up throughout the city of Toronto, which showed results by answering the question of getting one of our representatives in council and than on to the board of health, which proved the weight of influence our organization carried with the people in landing our friend Alderman Frank Maxwell on to the above board, who on the first sitting of the board proved that he had a mind of his own, again for the year 1921 going higher and becoming chairman of the board of health which has the care of a population of over 585,000.

Re Provincial Regulations

In the early part of the year, 1920, I had an interview with Mr. Rollo, the new Minister of Labor and Health, in company with Mr. Bruce, in reference to Provincial regulations, going into full details, showing him that it would be better for Mr. Dallyn, provincial sanitary engineer, who drafted same, to go before the new cabinet, making them acquainted with the circumstances from start to finish. The minister was making arrangements for the explanation to come from our side, which we did not think good judgment, the new government being strangers to the past conditions, it would be like starting all over again. It was a Bill No. 64, George V, 1916, introduced through the House by the late Hon. Mr. Hanna, to give the provincial

board of health the power to amend Schedule "B," Sections 14, 15, 16, 17, 23, 24, 25, 26, 27, and 28, passed by the provincial board of health May 6, 1918, waiting approval of Lieutenant-Governor in Council.

Under and by virtue of the authority conferred by revised Statutes of Ontario, Chap. 218, Sec. 8, s.s. (d.d.) and through amendment of Schedule "B" Public Health Act.

That health is a question of the moment, no one will dare deny, and the Ontario Government must play its part. It is the duty of the Ontario Government to have a well organized and equipped engineering department of health which shall strengthen and assist the municipal departments of health and civic councils to establish conditions by standardization which would result in a marked improvement in the general health of the entire community by which the people of every class would benefit.

The most important problem in the interests of the health of the community is undoubtedly the adopting of efficient methods of sanitary plumbing, heating and ventilation, therefore it becomes our duty to still seek and obtain legislation along these lines if we would protect and prolong the life of our people.

Action of Drain Air

The report made by special committee on the action of drain air in causing the deterioration of soil, waste and vent piping in buildings touches upon the questions of expansion and contraction of house-drainage lines, shrinkage and settlement of buildings, relative cost and economy of the various materials which are at present used. The report makes it clear that drain air exerts a strong corrosive influence upon the internal walls of house-drainage piping. It is urged by said committee that materials must last longer than the buildings if modern plumbing is to be classed as sanitary. Materials which have lasted only 15, 20 or 25 years are unsuitable and steps should be taken to prevent the use of all materials which have not stood the test of time.

In regard to the regulations governing the installation of sanitary conveniences, of the Province of Ontario under the Bill No. 64—1916 which is shown in the 36th annual report of the Provincial Board of Health.

These regulations should be enforced to work in conjunction with the Ontario Housing Committee, as the outside municipalities are in want of said regulations. We are in hope that at the sitting of this

coming sessions of the House of Parliament that the above regulations will come into force in the face of all the opposition that has been brought to bear on same.

Dr. Cunningham's Amendment

One of the worst offenders was Doctor Cunningham, of London, who got a resolution through the Ontario Municipal Association to amend the above and it reads like this:

Whereas the proposed Provincial Board of Health Plumbing Regulations provide for back venting and other regulations not in conformity with the best modern practice as provided by the recent regulations of several of the larger American cities;

And whereas the costs incurred by the said regulations are excessive and the regulations unnecessary and vexatious:

Be it resolved that this association petition the Provincial Government to withhold its approval of the Proposed Provincial Board of Health Plumbing Regulations and amend the regulations, giving municipalities the power to regulate.

In 1917 We Were Seeking the Licensing and Regulating of Steamfitters

As regards steam boilers and their installation:—They, it is true, properly come under regulations as to construction and inspection by the Hon. Minister of Public Works, but, the heating and ventilation of premises which comes under "public health generally" should be taken care of by the Department of Public Health, who should take advice from the Provincial Board of Health—according to the Public Health Act, Section 6 (b)—and under a by-law similar to that on Plumbing and Drainage (as the heating and ventilation is done by a master plumber in the majority of cases outside of hot air furnaces) and if a simple and practical regulation were drafted, so as to thereby make our dwellings fool-proof against accidents (from which Toronto has already suffered) I feel quite certain the public would be satisfied, for the city could issue separate licenses, if thought desirable, for the same. But was told by those in power, who make the statutes, nothing doing. But we never lost hope and right away a minimum standard was produced, feeling that the Hygienic Division, through the city of Toronto, would demand it some day. Which it surely did, giving a statute to build upon in the future.

Municipal Amendment

In the early part of the year of 1920 in reference to amendments and more

power for the Medical Officer of Health which was forwarded to Alderman Nesbitt, who was chairman of the Local Legislation Committee of the Council.

A draft of which we will read just referring to the points which touch our craft.

At the request of the Finance Commissioner I have had under consideration the necessity for additional legislation and authority to deal with problems which are met with quite frequently in carrying on the work of this Department, and in that connection I am submitting herewith a report embodying the amendments, etc., required. The legislation, part that concerns us, asked for, may be summed up as follows:

1. Amend P.H.A., Sec. 2 s.s. "K" to define "owner" as the person for the time being receiving the rent."

2. Sec. 6, s.s. "B"—Provincial Board to advise officers of Government re heating of premises.

Sec. 2, s.s. "K"

This section defines "owner as the..... "person entitled in his own right"to receive the rents, issues and profits of any property." It is a very difficult matter, in the case of a prosecution or where the person notified disputes liability, to obtain evidence that he is entitled in his own right to receive the rents and profits of the property. I much prefer the definition used in previous acts, as follows:—"Owners," means the person for the time being receiving the rent of the lands or premises in connection with which the word is used, whether on his own account or as agent or trustee of any other person, or who would so receive the same if such lands or premises were let, and would recommend that sub-section "K" be amended accordingly. Got the amendment which was under Bill No. 197, 1st Session, 15th Legislature, 10 George V, 1920.

Sec. 6, s.s. "B"

This section states that it shall be the duty of the Provincial Board to "advise the officers of the Government in regard toheating, ventilation of premises." Many complaints are received every day during the late fall, winter and early spring regarding the lack of heat furnished in apartment houses, as well as in houses where the upper flat has been sub-let and which is heated by the same furnace as downstairs, but where heat to the upper flat can be controlled by the occupant of ground floor.

In many cases we have found that practically no heat was furnished, and also in many cases insufficient heat was given, even where there were young children or sickness, and where it was absolutely necessary in the interests of health that a proper degree of heat should be maintained. As there is no specific authority in the act to deal with such cases, I would recommend that the Provincial Board be requested to advise the officers of the Government that the necessary authority be embodied in the act, and beg to submit the following draft clauses as a basis for their guidance:

(1) "Any premises used as a place of human habitation, factory, workroom, warehouse, public conveyance, school, or other place of assembly, shall be sufficiently ventilated, and a proper degree of temperature (as determined by the Medical Officer of Health) shall be maintained at all times such premises are in use or occupied, so as to protect the

health of the inmates or other persons using, or frequenting such premises."

(2) "The owner, or other persons having charge or control of the heating or ventilating apparatus in connection with any premises, shall be responsible for the maintenance of a proper degree of temperature at all times such premises are in use or occupied."

This sec. 6, ss "B" they would not amend but we still had hope that it would come up again in 1921, which it did under a bill No. 73. An act to amend the Municipal Act for regulating, controlling and inspecting the installation of all hot water and steam heating plants. A bill we tried to get in 1917, introduced by the Hon. Mr. Crawford, M.P., which had its first reading Feb. 18, 1921.

March 8th, 1921. On this date Cor-

JOHN WRIGHT,

Retiring Chairman of the Committee on Sanitation and Legislation, Ontario Society D.S. and H.E., whose report is presented herewith.

poration Council, Mr. G. R. Geary appeared before the Provincial Municipal Committee, giving to bill No. 73 second and third reading.

Putting on the statutes an act that the whole province through the different municipalities of Ontario can enlarge on in connection with regulating, governing of installations, similar to our plumbing proposed provincial by-law.

DEPARTMENT OF PUBLIC HEALTH 1920 Synopsis of Work Done—Plumbing and Drainage Division

Applications for Inspections:	
1918	10,638
1919	16,425
1920	16,959
Inspections Made:	
Plumbing	13,210
Drainage	6,901
Smoke Tests	2,756
Totals	22,867
Correspondence:	
Letters	7,142
Notices	7,785
Permits Issued	
Plumbing and Drainage:	
Permits	2,247
Buildings	3,244
Plumbing Only:	

Permits	1,454
Buildings	1,500
Drainage Only:	
Permits	395
Buildings	407
Totals:	
Permits	4,096
Buildings	5,151
Amended plans approved and filed	2,739
Requested plans	5,015
Master Plumbers registered	408
Certificates issued	384
Candidates examined	61
Journeyman Plumbers registered	419
Certificates issued	451
Candidates examined	84
Board meetings	36
Summons issued	38
Local improvements, contracts inspected and finished	41
Local improvements in progress	50

The Hygienic Division of Which we Are Very Proud

In presenting you a brief summary of the work accomplished by this division along the lines of industrial hygiene for the year 1920, I may state that there were cases of plumbing work done by handy-men around factories without inspection and in violation of the Sanitary and Plumbing By-Laws, such as sink wastes untrapped, fixtures without vents, traps unsealed, openings in wastes and vent pipes, resulting in sewer air escaping from the drain into the work-shops and factories. In some places the wastes were found discharging under floor, no connections being made with drains.

There were cases of plumbing improperly installed, and cases of defective plumbing. There were other cases found where closet vents and water closet bends were open and the air vile and offensive.

The above work was corrected, and made right by licensed plumbers. The record which is:—

Premises cleaned	31
Sinks and basins installed	55
Shower baths	3
Drinking bubblers and fountains installed	84
Gases and chemical fumes controlled	32
Trade dusts wholly or partly controlled	102
Plumbing defects repaired	162
Drains repaired	19
Number of yard privies abolished and sanitary conveniences installed	740
Conveniences installed on the assessment plan	44
Defective plumbing repaired and reconstructed, including industries	711
Number of drains repaired	185
New W.C's and urinals (in industries)	79
Basins and sinks (in industries)	55
Shower baths	3
Total number of nuisances abated by this division	5,992
Houses vacated (insanitary)	18
Cellars condemned	19
Houses turned into workshops and storages	61
Houses without city water	7
Water in cellars	51
Apartment houses unsatisfactory	65
Rooming houses unsatisfactory	11
Defective furnaces	44
Dirty closets	39
Gas escaping (illuminating)	41
Water wasting	128
Defective roofs and down pipes	60
Living in shops and workrooms	8
Insufficient light	2
Bad ventilation	30
Unsatisfactory public buildings	2
Complaints not well founded	126
Number of letters sent	1,824
Number of court cases	357

Satisfactory conditions found	2282
Unsatisfactory conditions found	696
Improved conditions which have been affected after notice—exhaust fans, hoods, vents, etc. installed	75
Improved ventilation	61
Improved lighting	8
New lavatories	79

So you see, gentlemen, it has certainly necessitated a lot of remodelling and repair work throughout which, according to the assessment roll, there are over 98,500 buildings in Toronto, and of these over 85,782 are homes. You can see for yourselves what this means in the future to the legal plumbers of Toronto.

Applying For License

We are still being asked if there is any set time when a plumber must apply for his license.

In reply would state that you will find in the Pamphlet No. 102 By-Law, Section 8, the answer to this question.

All licenses granted under this by-law shall be for the current year at the time of the issuing thereof and shall expire on the 31st day of December next succeeding the date of same.

A master plumber must protect the public by legally being licensed, for if he makes any charges for his work, and not licensed, he is receiving money under false pretences, and the journeyman likewise.

Again we recommend that members will be careful in buying large quantities of plumbing brass goods for they will require the name of the manufacturers' stamp on same. We would remind you in ordering piping that you would ask for genuine wrought iron pipe in all cases.

We draw your attention to the combination brass waste and overflow for baths which has been used by the trade which has not confirmed to clause 39 of By-Law 6388. We are also aware that you were unable to procure any other kind, but we are now informed by plumbing department that the manufacturers have in stock the kind required by by-law. Therefore, we would advise you that on and after January 1st, 1921, the plumbing department will demand their use, so do not install any which are smaller in size than 1½" outside diameter, which is 1½" brass tubing size, 18 gauge, Brown and Sharp or 04525 or its equal in substance.

Changes in Plumbing

In reference to some changes that have been made in connection with the installation and the additional fittings in relation with the plumbing of the city of Toronto.

That extra branch on footing of soil-pipe under floor in basement for extra fixture. It has been the practice of putting this in the class of an iron drain making it necessary for a Y and cleaning screw above bend on soil-pipe. It is now being changed so that it is not necessary to add the Y and cleaning screw on old work. The new addition to footing will be in the iron drain pipe class. Extra heavy and tarred.

And also we have decided on a change

in connection with high buildings running 12 stories and over. In reference to main vents there will be 3" cast iron for the 1st four stories and then 4" for the next eight stories and stepping up a size larger for the next eight and so on. The Durham system remains unchanged. Half sizes increasing every four stories up.

We have introduced into our plumbing (for certain classes of work) a single and double combination screwed waste and vent fitting which will be the means of simplifying certain classes of work, also cast iron 1¼ and 1½ screwed P traps can be used in conjunction with same in some cases.

INQUIRIES FROM OUT OF TOWN PLACES IN THE PROVINCE ASKING FOR INFORMATION

In Reference to Municipal and Provincial Affairs

By-Laws, etc.:—Officials from the following towns asked for certain information:—Ottawa, Port Arthur, Brantford, Guelph, Fort William, London, Hamilton, St. Catharines, Niagara Falls, Oshawa, Peterborough, Dundas, Elmira.

A FEW OUT-OF-TOWN INQUIRIES

One was from a city, whom I think are amending their plumbing by-law. They wanted to know why it was necessary to ventilate W.C. bends under floors when we know it is not impossible to syphon some of our later made water closets.

They were informed that the reason for venting these connections in Toronto are as follows:

To equalize the atmospheric pressure throughout the whole system of waste pipes, so that no dead ends may be allowed through the system, where the non-action of pure oxygen would allow the pipes to deteriorate, and the wiped joint on bend in particular to corrode and eventually cause a leak. You will readily see that with fresh air inlet on your drain, and fresh passage through the soil and waste lines of the outside air will prevent deterioration in metals contained in same.

Another one from out of town which was explained last year was in reference to local board of health. Was it legal for aldermen to sit on the board?

In taking the above up with the law clerk in charge of the Municipal Act, and his opinion is that the amendment to the act 1919, chapter 46, section 2, when read in with the amendment of the year previous makes it very clear that as the act stands now a member of the council may sit on the local Board of Health.

Legislation re Heating

The Legislature have now a bill before them to authorize municipalities to enforce minimum standards for hot water and steam heating systems of premises. This is a matter needing attention. About half the homes in Toronto with hot water systems are inadequately heated, and buyers of these houses do not find it out until they have tested the system themselves. When the hot-water

plant of seven-room dwellings costs about \$1,000, the incentive to the speculative builder to skimp the radiation is very strong, Toronto, at least should have a by-law enforcing radiation at least 25 per cent. larger than the so-called trade standard; the placing of not more than three radiators on one pipe-line; the use of only large size feed-connections into the radiator, allowing maximum circulation. The usual trade standard for radiation is one square foot for every 60 cubic feet of room area, one square foot for every ten square feet of exposed wall, and one square foot for each square foot of outside window or door. But so often the construction of the house is poor, the windows draughty, or the circulation defective, that the heating is insufficient. It is safe to say that Toronto has had considerable mortality arising out of "barn-like" hot-water heated houses, and the inspectors should have as much right to enforce certain reasonable minimums of heating capacity as they have to require efficient plumbing.

BILL

An Act Respecting Liens of Mechanics and Wage Earners, Supply Men and Others

Bill introduced by Mr. Sinclair.

The above bill No. 114 received its first reading in the House on the 18th of February, and I am credibly informed has been put in the hands of a special committee who are to consider it fully in detail at the close of the present session during the interim and report to the House at its next session their opinion thereon. It will therefore not receive its second reading this year and will therefore not be voted upon or become law before next year.

Minister of Health Wants Support

March 21st, 1921.—Met the Hon. Mr. Rollo, the Minister of Health for this Province, in reference to the proposed sanitation and plumbing regulations, to explain to me what support he was obtaining from the different M.P.'s and local boards of health of this Province who were approached by the various members of our organization, throughout the Province, who had promised at our last convention that they would take upon themselves this duty of getting in touch with their representatives of their home town and local boards of health. In fact we have some letters from these very same members, impressing on us that they had carried out, through the new Government, that said duty and up to date I find that not one of these said M.P.'s or boards of health have done a thing and labor which was going to do so much is in the same box as far as their representative is concerned. So, gentlemen, you see without the assistance and support of the above M.P.'s and boards of health we are not making the progress that we should. We have circulated over 500 copies through the different channels. So you see, gen-

(Continued on page 25)

Changes in the "Gas Inspection Act"

Unit of Measure is the Cubic Foot or by British Thermal Unit if Sold by Heat Units—Regulations re Installation of Meters and Inspection

A NUMBER of changes are made by an act to amend and consolidate the Acts respecting the Inspection of Gas and Gas Meters, as introduced at the present session of the Federal Parliament. The Act is reproduced in full as follows:

An Act to amend and consolidate the Acts respecting the Inspection of Gas and Gas Meters.

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

Short Title

1. This Act may be cited as The Gas Inspection Act.

2. In this Act and in any regulation made thereunder, unless the context otherwise requires,—

(a) "contractor" means any company or person agreeing to furnish gas to any purchaser;

(b) "Department" means the Department of Trade and Commerce;

(c) "gas" includes natural as well as manufactured gas;

(d) "inspector" means any officer appointed under the authority of this Act;

(e) "meter" means gas meter, and includes every kind of machine, apparatus or instrument used for measuring the quantity of gas or the calorific power of gas supplied to a purchaser;

(f) "Minister" means the Minister of Trade and Commerce;

(g) "purchaser" means any person to whom gas is sold;

(h) "regulation" means any regulation under the provisions of this Act;

(i) "verified meter" means a meter that has been verified and sealed in accordance with the provisions of this Act and of the regulations. s. 2. Am.

Regulations.

3. The Governor in Council may from time to time make such regulations, not inconsistent with this Act, as are necessary for giving effect to its provisions; and,

(a) for determining the calorific power of gas and establishing standards therefor;

(b) for defining the methods of making the tests prescribed by this Act and the places where such tests shall be made, and for defining territorial districts;

(c) for declaring the true intent and meaning of this Act in all cases of doubt;

(d) for prescribing how the units of measure mentioned in this Act shall be determined;

(e) to provide for the custody of any apparatus, stamps or supplies used or required for the purpose of this Act or of the regulations;

(f) to prescribe the duties of officers appointed for the purposes of this Act. s. 3. Am.

Units and Standards

4. (1) The unit of measure for the sale of gas by quantity shall be the cubic foot.

(2) The unit of measure for the sale of gas by heat units shall be the British Thermal Unit.

(3) The standard apparatus necessary to establish the said units shall be deposited and maintained in the Standards Laboratory of the Department of Trade and Commerce, and shall form part of the system of standards of measure and weight established by the Weights and Measures Act. ss. 4, 5, 6. Am.

Registration.

5. No distribution system for supplying gas to any purchaser shall be operated until the contractor has obtained from the Minister a certificate of registration for such system. Such certificates shall expire on the thirty-first day of March in each year. New.

Inspection.

6. (1) The contractor may at all reasonable hours enter the premises of any purchaser to whom he may be or has been supplying gas, for the purpose of

(a) inspecting and testing all piping, fittings or apparatus for the conveyance, measurement or consumption of gas;

(b) ascertaining the quantity of gas consumed or supplied;

(c) changing or removing any piping, fittings, meters or other apparatus belonging to the contractor.

(2) The contractor shall be responsible for, and shall immediately repair and make good all damage caused by such entry, inspection, testing or removal. New.

Pressure.

7. The contractor shall from time to time report to the Minister what the minimum service pressure is, and shall provide, free of charge, gas and piping and all other reasonable facilities at such place or places as the Minister may designate, for making such tests of gas and meters and other apparatus as the Minister may deem necessary for the purposes of this Act. New.

Officers.

8. (1) There may be appointed for the purpose of this Act a Director, together with such assistants as may be deemed necessary. Such director shall have the direction and general supervision of the work of gas and gas meter inspection throughout Canada, and shall have the custody of all the standards for gas measurements and of all laboratory equipment. New.

(2) In each gas inspection district in Canada a district inspector with such assistants as may from time to time be found necessary may be appointed, and his duties shall be:—

(a) to have the custody of all measuring, testing and sealing apparatus, all stamps and supplies furnished for use in his district;

(b) to be responsible for the general inspection work of his district and perform such other related duties as may from time to time be assigned to him by the Minister.

(3) Any officer appointed under the provisions of this Act may at all reasonable times enter any premises where gas is being manufactured, distributed from or used, for the purpose of performing any duty imposed upon him by this Act. s. 7. Am.

(4) No person shall be employed or appointed under this section either temporarily or permanently until he has passed a qualifying technical examination, such examination to be held under the direction of the Civil Service Commission. New.

(5) No person shall be appointed, under this section, or shall act as an officer under the provisions of this Act or of a regulation who is a seller of gas or gas meters, or who is employed by a seller of gas or gas meters. s. 9. Am.

9. (1) The quantity of gas supplied by any contractor to any purchaser shall, if either party so desires, be ascertained by means of a meter.

(2) When gas is sold by heat units the quantity of such units per cubic foot of gas supplied shall be ascertained by means of an approved calorimeter, to be used under such conditions and in such locations as may be determined by regulation. New.

(3) No meter shall be installed for use until it has been duly verified and sealed in accordance with regulations established under the authority of this Act. s. 14. Am.

(4) No meter shall be admitted to verification in Canada until the type of meter to which it belongs has received the approval of the Minister. New.

(5) Within six years from each verification and sealing every meter shall be presented by the owner for re-verification and re-sealing, or for the cancellation of the seal by the inspector. s. 18. Am.

(6) No meter shall be verified or sealed by any person who is not an inspector, and no person other than an inspector shall break the seal of any verified meter the correctness of which is in dispute, or, not being an inspector or the owner, shall break the seal of any verified meter. No meter on which the seal has been broken shall be continued in use until it has been re-verified and re-sealed. s. 55. Am.

(7) In every case the owner shall keep every verified meter that is in use in good repair and shall be responsible for the due inspection and testing thereof, and except as herein otherwise provided, shall pay the fee lawfully chargeable for such inspection, and shall be liable for all penalties incurred with respect to such meter. He shall keep a record of all meters in his possession, giving their location and all tests made thereon, which record shall be open to the inspector during business hours and from which the inspector may make such extract copies as he may require. s. 24. Am.

(8) The contractor shall notify the District Inspector without delay of any change of location of any verified meter from one inspection district to another, and also of the number, mark or other description of any verified meter that may be sold, scrapped, destroyed, burnt or lost. New.

Disputed Tests.

10. (1) If at any time the contractor or purchaser is dissatisfied with the condition or registration of any meter, the inspector shall, at his request and upon depositing with such inspector the prescribed fee, make such tests as are necessary to show the condition of the meter. Tests made under such circumstances shall be designated disputed tests. Disputed meters found to be correct shall not be re-stamped, but may be continued in service for the unexpired period indicated by the date on the seal that was on the meter immediately before the disputed test. s. 28. Am.

(2) The inspector shall issue to the requesting party a disputed test certificate showing the result of the disputed test, and shall give a duplicate thereof to the opposite party. The cost of such certificate shall be borne by the party against whom the decision is given. If either the contractor or the purchaser is dissatisfied with the finding of any inspector, the inspector shall, if so requested in writing by such dissatisfied party, refer the matter to the Director, and the decision of the Director thereon shall be final and conclusive. s. 29. Am.

(3) If on a disputed test the meter is

found to register with an error greater than that permitted by regulation, such error shall be held to have existed for a period of three months, or from the date on which the meter was last sealed if the said sealing took place within three calendar months previous to the disputed test, or, in the event of the meter being more than three months past due for re-verification, then from the date on which it should have been re-verified, and the contractor or the purchaser, as the case may be, shall be entitled to the amount represented by the full error of the meter. s. 22. Am.

(4) The owner of any verified meter may have it re-tested upon paying the prescribed fee, and shall have the same right to appeal to the Director. s. 29. Am.

Fees.

11. (1) All fees connected with the testing of gas and gas meters shall be determined from time to time by the Governor in Council and published in the Canada Gazette. Such fees shall be regulated so that they will, as nearly as may be, meet the cost of carrying this Act into effect, and all fees received under this Act shall be accounted for and paid to the Minister of Finance at such times and in such manner as the Minister of Finance directs. s. 48. Am.

(2) All fees shall be due and payable at the time the verifications are made, and shall be paid before the certificate is issued. The Inspector shall affix to the certificate an adhesive stamp or stamps equal in value to the amount of such fees, and shall cancel such stamps at the time of affixing the same, and no certificate shall be valid or avail for any purpose whatsoever, unless the requisite stamps have been duly affixed thereto and cancelled. s. 49. Am.

(3) The Governor in Council may from time to time direct stamps to be prepared for the purposes of this Act bearing such device as he thinks proper, and may defray the cost thereof out of any unappropriated moneys forming part of the Consolidated Revenue Fund. Each stamp shall have expressed thereon the value at which it shall be reckoned in payment of the prescribed fees. s. 50. Am.

Accounts.

12. Separate accounts shall be kept of all expenditure incurred and of all fees and penalties collected and received under the authority of this Act. s. 51. Am.

Penalties.

13. Every contractor who refuses or neglects to obtain, within thirty days after the first day of April in each year, the certificate of registration required by this Act, shall be liable to a penalty of ten dollars for each day during which such refusal or neglect continues. New.

14. Every person who, except under the authority of this Act, makes, causes or procures to be made, or assists in making, or who forges or counterfeits, or causes or procures to be forged or counterfeited, or assists in the forging or counterfeiting of any stamp or mark or seal issued for the stamping, marking or sealing of any meter under this Act, or any certificate required by this Act, is guilty of forgery, and shall be punished accordingly, and every one who steals any such stamp or seal is guilty of theft; and every person who knowingly sells, utters or disposes of, lets, uses, lends or exposes for sale, any meter with such forged stamp or mark thereon shall for every such offence be liable to a penalty not exceeding two hundred dollars and not less than twenty dollars; and all meters having on them such forged or counterfeited stamps or marks shall be forfeited to His Majesty, and shall be destroyed or otherwise disposed of as the Minister may direct. ss. 52, 56. Am.

15. Every person who repairs or alters, or causes to be repaired or altered, or tampers with or does any other act in re-

(Continued on page 30)

Apprenticeship Plan is Recommended

Steps to Attract More Apprentices to the Building Trades— National Apprenticeship Council to be Formed

THE National Joint Conference Board of the building trades industry has issued to employers' associations and trades union organizations for their approval an apprenticeship plan. The Conference Board admits that neglect of those actively engaged in the industry to provide education on technical lines; the intermittent nature of employment; the desire of employers to use boys during rush periods only, and the general lack of interest and sympathy between employer and employee, with consequent loss of opportunity for a boy to acquire training essential to make him a good mechanic, have had a serious effect on the industry.

"We are conscious that this matter of vital importance has been neglected, and if we are to bring about a condition which will aim to fulfil the requirements of the industry we must lay down new principles on a solid foundation," explains the Conference Board. "In attempting to solve the problem we are conscious we shall meet with many objections and experience many difficulties. Any plan, to be successful, will need the hearty co-operation of all who realize the seriousness of the problem and the necessity of providing a solution."

First Essential of Plan

The Conference Board first recommends a National Apprenticeship Council, composed of an employer, a journeyman, two architects and two industrial engineers from each branch of the industry, who will set up local councils of a similar character. Indenture forms will be drawn up and boys apprenticed to employers shall be given every opportunity to learn their trade in the workshop, on the job and by attendance at a technical school for one-sixth of his time, without deduction of wages, which shall be not less than two half days a week, and shall be bound to attend evening courses twice a week during school terms.

It is recommended that the local council shall arrange hours of labor, working conditions, rates of wages, and all other matters pertaining to the training of apprentices, and arrange with local educational authorities classes for apprentices. An examination board of not fewer than three members shall be appointed by the council, and shall conduct at stated periods the examination for apprentices.

To Govern Local Conditions

The local council will determine the number of apprentices necessary, and will make the necessary arrangement to transfer apprentices from one employer to another if it is thought the appren-

tice can better acquire special knowledge and experience in this way.

The proposed indenture form is to be signed by the parent or guardian of the apprentice, the apprentice, the employer and the Apprenticeship Council.

The boy will not be permitted to join any society claiming to control his labor, except a labor organization after he has served two years of his term, and he may also join the militia. His hours of labor will not include Sundays, New Year's Day, Good Friday, Victoria Day, Dominion Day, Labor Day, Thanksgiving Day and Christmas Day.

Conduct of Apprentices

Under the terms of the covenant, the first party, who is the parent or guardian, agrees that if the apprentice at any time during the said term is dismissed "for want of good and faithful attention to his duties, or for divulging the secrets of his employer, or for his not readily and cheerfully obeying the commands of the employer, the foremen, or other superiors, or for any reason or justifiable cause whatsoever" on demand, to pay to the employer damages ranging from \$25 to \$100.

Wages are not fixed in the indenture, this being left to local councils, but it is recommended that increases shall be at the rate of \$1 every three months.

The local Apprenticeship Council is to be permitted to retain \$25 a year from the apprentice's wages as a guarantee of his good behavior, and the maintenance of covenants. If the apprentice is dismissed, or deserts his employer, the wages retained shall be considered part payment of damages incurred by the parent or guardian.

QUEBEC CONSIDERS ASBESTOS CONTROL

Quebec.—It is reported that the Quebec Government is considering the question of putting the asbestos mining industry of the province under control in the same way as it has dealt with the pulpwood industry, providing that in the development of the asbestos mines it shall be a condition of the leasing of rights that plants be established in the Province of Quebec for the manufacture or partial manufacture of this material.

At the present moment Quebec Province supplies 85 per cent. of the asbestos requirements of the world, but very little is manufactured in the Province, plants being mainly in the United States.

One hundred and seventy-four thousand five hundred and twenty-one tons of asbestos, valued at \$11,758,234, were shipped from the Province in 1919-20.

Sanitary Engineers on Health Boards

Sanitary Engineer Claimed to be Logical Executive for Public Health Work—Should Have Equality With Medical Officer

MR. E. G. SHEIBLEY, consulting sanitary engineer, Los Angeles, Calif., writing in the *American City*, suggests that more engineers should be engaged in public health work, as members of health boards and as commissioners of health. It is claimed that the sanitary engineer, because of his training and experience, is the logical executive for public health work. While the laws generally permit only practising physicians to hold the office of city or county health officer, in older countries it is the sanitary engineer who performs the executive duties. Generally, however, in all countries the sanitary engineer acts as deputy health officer, and as such may do the greater part of the actual work, but must be subordinate to the doctor of medicine who holds the office. Should not the sanitary engineer be placed in a position of equality with the medical officer and only highly qualified men selected for the duties?

Mr. Sheibley goes so far as to suggest the advisability of naming an engineer as health officer, with addoctor of medicine retained in the position of assistant or consultant. In support of the suggestion Mr. Sheibley says:

"The duties of a health officer may be divided into three classes of work—medical, executive and administrative

(business), and engineering. Perhaps ten per cent. of the duties of a health officer require medical training, and of course no one would trust the judgment of any non-medical man in such problems as the diagnosis of disease and the prescription of treatment or medicine. As contrasted with this limited number of purely medical functions, probably fifty per cent. of the health officer's duties demand an engineering knowledge and experience; while as a rule the general executive and administrative training of the engineer is superior to that of the practising physician in practically every instance.

"On every health board, state and city, the engineer and the doctor should have equal representation. The doctor of medicine is primarily interested in the cure of constitutional disease; the sanitary engineer is primarily interested in the removal of those environmental causes which are responsible for about one-half of the diseases of common occurrence." It is no reflection on the medical profession that only a few practising physicians know the relative advantages of an activated-sludge plant and an Imhoff tank; while such questions, of concern to the community and its health officer, are part of the elementary knowledge of the sanitary engineer."

Sewer and Water Pipe Construction

CONCRETE sewer and water pipe construction was the subject of an interesting talk given before the St. John branch of the Engineering Institute of Canada by W. G. Chace, M.E.I.C. The lecture was illustrated by motion pictures of various plants including views of works similar to the new Spruce Lake Pipe Line Construction.

Mr. Chace, who is vice-president of the Engineering Institute of Canada and president of the Canada Lock Joint Pipe Co., Ltd., was introduced by G. G. Murdoch. Mr. Chace began his address by describing different structures for carrying water with special reference to a paper written by Wynne Robertson, Toronto, and read before the Engineering Institute of Canada at its January meeting. He compared free flowing conduits with those carrying water under pressure, the science of which is relatively newer than the construction of free flowing conduits. He spoke of the different classes of materials used such as wooden staves, banded steel, cast-iron pipes and reinforced concrete.

With a reel of motion pictures Mr. Chace then showed the process of making

reinforced concrete pipes as carried out by the Lock Joint Pipe Co., Ltd.

On the Spruce Lake job they are making 144 feet of 36-inch pipe per day; and it was pointed out that local labor is employed and materials taken from local sources.

Wonderfully ingenious machinery was shown which is used in handling these pipes and which Mr. Chace explained was mainly invented by Mr. Nichols, of the company. Views of the manufacture of reinforced concrete pipe were given from the mixing of the gravel for concrete to the completed pipe at the moment of its being deposited in a trench. Various dredges were used and pictures of the men at the works given.

SOME IMPORTANT LEGISLATION (Continued from page 22)

tlements, it is only a case of explaining same.

Sanitary plumbing is of more real value than medicine. Plumbing provides means for keeping the body, wearing apparel, the house and our streets and alleys clean. Cleanliness means healthfulness. A plumbing system stands for

cleanliness, which also means that the plumbing system prevents where medicine cures, and prevention is more desirable than the cure.

Investigation has shown that in the absence of sanitary regulations and whenever each person is permitted to install a plumbing system according to his own ideas, insanitary conditions are sure to prevail. Shall the standard of plumbing regulations be determined by the person who lives in the house, by the owner, the manager, real estate speculator, material manufacturer, or in conformity with the standard of living and decency?

A great many people still cling to the idea that plumbing codes are created and the laws enacted for the sole benefit of plumbers and the public is made their legalized prey. This idea is kept in motion by real estate speculators, specialty and material manufacturers and others whose only interests are mercenary. No humanitarian, social, moral, financial or sanitary argument can be adduced against the enactment and the standardization of plumbing codes by the government. This will not only eliminate commercially interested individuals and corporations, but any other organization whose interests are purely selfish.

To protect the public from insanitary plumbing and the influence of harmful surroundings caused by reckless competition, the use of cheap and defective material and improper installation, construction, installation and inspection of plumbing.

Another feature that I want to call attention to until we get the proposed provincial regulations is the fact that the government will come into your city to erect a post office or some other building and when same is found not to be in accordance with your code they then tell you that you have no authority over that particular piece of property, in which event, I think, you can refuse to give them entrance to your sewers. If plumbing is not put in in accordance with your city by-law the government will have to give way or follow the proceedings of the local code when there is a difference in the two codes.

In submitting to you the account of my stewardship, and at the same time laying down the burdens and responsibilities of the office with which you have honored me, let me again express to you my heartfelt gratitude for the honors conferred and at the same time extend to the officers and all other interested friends associated with me that gratitude which every man feels who has been nobly assisted in the work. I trust that my successor may have your continued and kindly consideration, your loyal support, and greater enthusiasm in the assistance given him by the individual members as well as by his associate officers.

PRACTICAL PLUMBERS, GASFITTERS AND ROOFERS

93 TO 99 DOMINION STREET,

MONTREAL. April 8th, 1921. 19

Port Hope Sanitary Mfg. Company, Ltd.,
234 Beaver Hall Hill,
MONTREAL. -

Gentlemen:-

We have just finished the contract for the extension to the Factory for the Berliner Gram-O-Phone Company, this city, in which we installed Five hundred and Ninety-seven (597) "PORT HOPE" Enameled Lavatories and Iron Traps.

You might be interested to know that our Foreman who was in charge of this contract stated that:-

"The quality of material supplied, and the service rendered by your Company enabled him to make the nicest installation in appearance, and gave him less trouble in roughing-in of any contract of a similar size he had previously undertaken".

It gives us pleasure to give you this information complimenting you upon the high grade of your material.

Yours very truly,

HICKEY & AUBUT,

per 

MMcG/TD.

Makes Contracts Run Smoothly

WHEN you are pleased with the goods supplied by a Manufacturer, tell him. He'll like it. That's why we print Messrs. Hickey and Aubut letter and thank them for their consideration.

The fixtures to which reference is made consisted of five hundred and ninety-seven (597) Special Factory Lavatories, and the same number of Enamelled Iron Traps—a beautiful installation.

The goods were supplied through Messrs. Crane, Limited, of Montreal, in accordance with the Company's policy to distribute its products, as a matter of convenience to the Contractors, only through leading Jobbers.

There are two lessons to be learned from this transaction. First, the magnitude and importance of Factory Sanitation. Owners of industrial plants recognize the advantage of good sanitary conditions, and that branch of the business offers a fruitful and profitable opportunity for progressive Plumbers.

The second lesson is, when you are placing an order with your Jobber specify PORT HOPE Enamelware. It gives your superintendent and workmen very little trouble and your customer a great deal of satisfaction.

HIGHER PLUMBING STANDARDS

WHATEVER may be the general view regarding the presence of sanitary engineers on local Boards of Health it is certainly important that more responsibility should be placed on the shoulders of the sanitary engineer and an improved status given to the profession. Plumbing, garbage and refuse disposal, water-supply, sewerage and sewage treatment are problems primarily in sanitary engineering, and require constructive engineering capacity to deal with them.

The encouragement of the sanitary engineer by enlarging his functions and putting him in direct charge of the correction of defective sanitation is necessary to secure the improvement of sanitary conditions. He should be the official responsible for a great deal of the preventive work that is needed so as to overcome the growth of evils that are so difficult and costly to remedy. Most of the defects in housing in Canada are due to neglect of control of sanitation. Sanitary inspectors are too often chosen without regard to their fitness as engineers. If we are to have a better trained profession in sanitary engineering we must give more scope for the men who enter it and the higher standards of pay and responsibility that will attract skilled men. This is no reflection on the important part played by the medical profession in municipal work, but a suggestion that their work should be supplemented by engineers having a special training and knowledge in sanitary work. Certainly the present system of control of sanitation is not satisfactory, and the time is opportune for considering whether greater responsibilities and improved status should be given to engineers on provincial and local boards of health.

TO-DAY'S PLUMBING PROBLEMS

A REVIEW of the proceedings of each of the recent annual conventions of the various provincial organizations of sanitary and heating engineers in Canada reveals the fact that not only is the present generation of operators moving to the higher status to which they are entitled as a class, but ample provision is being made for the education of the coming generation of operators so that they will not suffer any handicaps in upholding that status.

This sentiment is evident especially in the pro-

ceedings of the convention of the Ontario Society of D. S. and H. E., the complete report of which appears in this issue. The reports on sanitation and legislation emphasize the fact that the counsel of competent operators is being sought by those in authority. A noteworthy example is the request of the Ontario Minister of Labor for the help of the society members and the plumbing trade papers in framing the plumbing regulations for the province.

An important step in assisting the work of educating the trade to a higher appreciation of their status is the formation of a Canadian Trade Extension Bureau along similar lines to that of the United States, which admittedly has been of much valuable assistance to the trade in that country. It must not be overlooked, however, that the trade papers have, by means of market information on prices and tendencies, and the outlining of display suggestions, advertising and accounting methods, been helping for some time in the education of the trade along such lines. The additional efforts of the Trade Extension Bureau will, however, further this work. At the convention just concluded definite action was taken to establish a bureau in Canada.

Apprenticeship problems loom big when discussing plans for the raising of the future status of the trade. In this connection it is good to note that instructional courses provided in Toronto for apprentices have been well attended and proved valuable.

There are plenty of signs that the plumbing trade of Canada under competent leadership can become an important influence. That is the end to which present effort is being directed.

PROPHYLACTIC PLUMBING?

THAT formidable looking word means "guarding against"; more particularly, through usage by medical men, guarding against disease. Ever since the days of open plumbing every step of progress might be said to have made plumbing still more "prophylactic," from the standpoint of sanitation—of guarding against disease.

But we are thinking of "prophylactic" plumbing in another sense—in the sense of a different preventive service. No modern sanitary engineer gives a place of primary importance in his business to the petty emergency.

We hope to see every sanitary engineer giving such "prophylactic" service—service that guards against frozen pipes and emergency repairs, service that prevents defects, builds good will, and more and greater business, so that about the time "Bill" is ready, through experience, for this larger, worthier work his old job on emergency repairs will have practically disappeared. Do not neglect service. This change of character in a plumbing business comes through attention to quality, efficiency, service.

Reducing Cost of Plumbing Installations

Method Proposed by Jas. Marr, Sr., Calgary, for Reducing Cost of Plumbing Installations in Small Houses—To Test the “Proposed Standard”

(Address by Jas. Marr, Sr., Calgary, before convention of Alberta Master Plumbers.)

IN dealing with this subject of lowering cost on plumbing installation in small houses, let it be understood that I am speaking to a Western convention and what I have to say would apply more particularly to Western city conditions, where the use of a disconnecting trap on a house drain is hardly known, and where sewer gas in quantity or quality that would be injurious to metals used in plumbing installations is not allowed to exist, owing to the manner of making every connection to our main sewer act as upcast or downcast shaft, or free ventilation. Therefore, what we would have to consider is the prevention of “sewer air” (we will give it this name until we arrive at something different) from entering the house under every day conditions.

You have here shown three methods of rough plumbing of waste lines on a small house.

Waste of Materials and Labor

The first we will call the “Accepted Standard.” This method is embraced in the Health Laws of our Province, which require a four-inch soil pipe as main stack and drain, with branch connections vented in by the manner shown by drawing. After years of careful study I have come to the conclusion that this method is a waste of materials and labor.

Proposed, Non-Accepted and Accepted Standards, in plumbing installations as dealt with in the address by Jas. Marr, Sr. This shows the plumbing fixtures installed.

Proposed, Non-Accepted and Accepted Standards in plumbing installations as dealt with in the address by Jas. Marr, Sr. This shows the roughing-in work.

That the fittings now in use are wrong in principle, because in practice they have defects well known to the trade, their liability to choke and their assistance to syphon action condemns them as a proper and safe fitting for practical purposes. Why should we continue a practice knowing it to be bad and not protest?

Non-Accepted Standard

The second we will call the “Non-Accepted,” but was used in the construction of small homes during the late war period by the Government of the United States. The worst we had to say of the first was wastefulness, but in this it is criminal. Look at the basin trap and you can see a perfect syphon, the waste from combination fixture in kitchen is also poor practice. The only good feature in this method is the use of three-inch soil pipe. Had there been sensible fittings used the method would have had one redeeming feature.

Proposed Standard

We now come to the third, which we will call the “Proposed Standard.” The soil stack like number two is three-inch soil, while number one and two had what is termed standard fittings. This method has fittings of a special pattern which it is my purpose showing you, and to demonstrate by the use of glass pipe and

BEFORE AND AFTER FLUSHING

these fittings, that they are right in practice and in art, equal to the standard fitting.

The purpose of this fitting is to eliminate the use of small vents and confine the venting of the installation wholly to the main stack. For the better economy of the system proper planning of the fixtures would have to be considered, that in no case need there be any use for an "S" trap. All branch connections could be run from main stack to a distance not exceeding the diameter of the pipe, giving the pipe the usual fall. In this way the air in horizontal pipe would be changed at each flush and the possibility of syphonage would be nil.

To show that the rough work is no freak I will proceed to install the fixtures and make the job complete.

I think the demonstration and test of the "Proposed Standard" has been of such a nature as to satisfy us in making formal application to the Provincial Board of Health, coupled with that of the

cities that we represent, for a permit to have one or more houses fitted up by this method so that a test could be made in actual use.

I have in mind a further extension of the principle to cover larger installations which we may consider at a later period.

CHANGES IN GAS INSPECTION ACT (Continued from page 24)

lation to any verified meter so as to cause such meter to register unjustly, or who prevents or refuses lawful access to any meter in his possession or control, or obstructs or hinders any examination or testing authorized by this Act, shall be liable to a penalty not exceeding one hundred dollars and not less than fifty dollars, and shall also be liable to pay the expense of and fees for removing and testing the meter and the expense of purchasing and installing a new meter: Provided that the payment of any such penalty as aforesaid shall not exempt the person paying it from liability for any punishment to which he may otherwise be liable upon indictment or other proceeding, or deprive any person of the right to recover damages against such person for any loss or injury sustained in conse-

quence of such act or default, s. 53. Am.
16. Every contractor who fails to keep the records required by this Act, or who refuses to allow an inspector to examine such records and to take such extracts therefrom as he may deem necessary, shall be liable to a penalty of fifty dollars. s. 58. Am.

17. Every person who,—

(a) installs or causes to be installed in any purchasers' service any meter that has not been verified and sealed as herein required; s. 54. Am.

(b) refuses or neglects to present any meter installed in any purchaser's service for re-verification or re-sealing within six years after the preceding verification and sealing, or, being a contractor, permits any such meter to continue in service beyond the said six years, or refuses or neglects to present any meter which has been verified and sealed for the cancellation of such seal immediately after the expiry of six years after it has been so verified and sealed; New.

(c) not being an inspector, verifies or seals or issues a certificate as to the accuracy or condition of any meter after it has been fixed for use; or s. 55. Am.

(d) not being an inspector, breaks or causes to be broken the seal of any verified meter the accuracy of which is in dispute, or, not being an owner or inspector, breaks or causes to be broken the seal of any other verified meter; New. shall be liable to a penalty of twenty-five dollars for each meter with respect to which any of the provisions of this section have been violated.

18. Any contractor selling gas by heat units who supplies gas below the standard calorific power prescribed by regulation shall be liable:—

(a) if the contractor has more than ten gen (HS) shall be liable to a penalty not exceeding eighty dollars for the first offence and double this penalty for each subsequent offence;

(b) if the contractor has more than five thousand and not more than ten thousand verified meters, to a penalty not exceeding sixty dollars for the first offence and double this penalty for every subsequent offence;

(c) if the contractor has more than two thousand and not more than five thousand verified meters, to a penalty of forty dollars for the first offence, and double this penalty for every subsequent offence;

(d) if the contractor has more than one thousand and not more than two thousand verified meters, to a penalty of twenty dollars for the first offence and double this penalty for every subsequent offence;

(e) if the contractor has one thousand verified meters, or less to a penalty of ten dollars for the first offence and double this penalty for every subsequent offence.

For Supplying Injurious Gas.

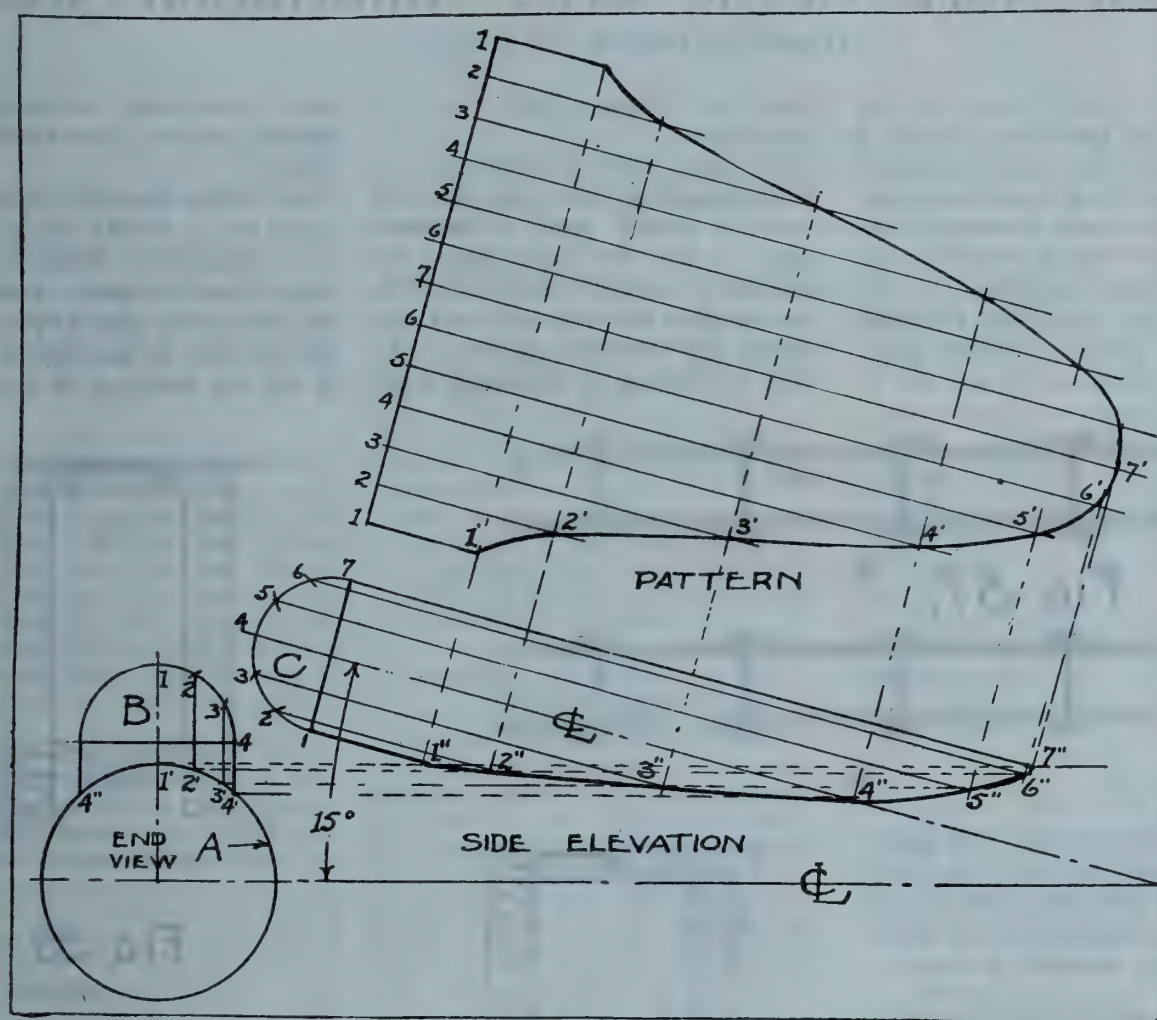

19. Any contractor who supplies any purchaser with manufactured gas containing any trace of sulphuretted hydrogen (H₂S) shall be liable to a penalty not exceeding one hundred dollars and not less than twenty-five dollars. s. 57 (1). Am.

20. Every person who violates any of the provisions of this Act, or of any regulation established under this Act, or refuses or neglects to perform any duty imposed by this Act or a regulation, for which violation no penalty is specifically herein provided, shall be liable to a penalty of not less than twenty-five dollars and not more than one hundred dollars. ss. 7 (3). Am.

21. All penalties imposed under the authority of this Act or of any regulation shall be recoverable on summary conviction, with costs,—

(a) before any justice of the peace for the district, county or place in which the offence was committed if the penalty does not exceed twenty-five dollars; or

(b) before any two justices of the peace, if the penalty exceeds twenty-five dollars. s. 62. Am.

Patterns for 15 Degree Tee Branch

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri.

A TEE pattern placed on a 15 degree, the following method is followed:

First draw the end view, making the large circle equal to the diameter of main pipe. Then from the centre lines are drawn, with section B in place.

Observe that this divided in equal parts, and lines dropped down to the circle A, gives the distance the branch B spreads over the large pipe, as 1'-2'-3'-4'.

Then by projecting horizontal lines over from each of these points, we have the altitudinal points or rises between each line.

Next draw the branch side of side elevation, so the centre line is 15 degrees from the horizontal centre line.

Then describe section C to the same diameter as B with all its points, and extend lines parallel with the centre line

of side elevation. Where these lines intersect with the horizontal lines—that is your intersections for miter line as 1''-2''-3''-4''-5''-6''-7''.

Next observe how this side branch pivots by the centre lines, and that no matter what the angle of branch the intersections take place, and this makes the miter line.

Each different angle will make a different miter, but that does not change the method.

To set out the pattern, pick the girth from section C and set off at right angle to center line 4-4'' and from each point in miter line square out lines until they intersect in pattern of similar numbers as 1'-2'-3'-4', etc.

Through these points trace your miter cut, and the pattern is finished, only laps for seaming or riveting and flanging must be allowed extra.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights
—Keep the Entire Series Where It May be Referred to and Studied

Article No. 29 of the Series—Illustration No. 37

(Continued from March 1 issue)

FIGS. 37, 38 and 39 show the plan, cross and longitudinal sections of a modern two story sedimentation tank (or Imhoff) capable of treating the sewage from a population of 200 to 300 people. The walls are of concrete construction and should be reinforced with steel rods at least two-thirds up from the footings—depending greatly upon the nature of the soil and the

hours, and its velocity should be 1.75 ft. per minute.

The sludge digestion chamber should be constructed so that all the sides fall toward a central sump at sufficient angles so that the sludge, during the emptying process, will slide down of its own accord to the outlet pipe, thus facilitating the cleansing operations. In large installations a perforated water

down to the sump, at the same time cleaning the tank sides from deposited sludge.

This sludge digestion chamber is designed for six months' storage capacity, which means the removal of sludge twice a year by means of the upright cast iron sludge pipe which discharges into the tiled by-pass laid at a grade of not less than 1 in 30 direct to the

pressure of earth the wall will have to withstand when the tanks are empty, therefore the structural design of the tank cannot be covered by this work—which will vary according to local conditions.

The tank is 10 feet wide by 15 feet in length and has an inside depth of 19 feet with an inlet and outlet weir, the full length of the sedimentation tank which is formed by the concrete or wooden sludge aprons set at an angle of 60 degrees, overlapping each other. These form the necessary air seal between the sedimentation and sludge digestion chambers. The aprons should be well supported by reinforced concrete beams well tied into the main concrete walls of the tank and should rest on a reinforced concrete beam as illustrated.

This sedimentation tank should be designed so the average flow of sewage through the tanks varies from $1\frac{1}{2}$ to 2

Fig. 38

pipe taken off the water supply main is sometimes fixed around the walls, and when cleaning out the tank the water is turned on and helps to force the sludge

Fig. 39.

valve chamber feeding the sludge beds. The outlet of this pipe should be kept at least six feet below the tank water level so that the tank water head will force the sludge up the upright pipe into the sludge main, discharging onto the sludge drying beds.

Gases are given off during the decomposition of the sludge from this digestion chamber, and ample ventilating space should be provided as shown on the drawing, as pipe and other ventilating methods have proven very unsatisfactory owing to becoming choked by the sludge rising in the tank.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Toronto.—Thos. Pulfer, plumber, has been succeeded by A. T. Thompson.

NEW FIRMS

Hamilton.—Fred Thornton has commenced business at 310 Ottawa St. North.
Toronto.—N. L. Saltzman has commenced business as retail hardware and sanitary engineer at 534 Dundas St. W.

NEW FIRM IN OTTAWA

Ottawa, Ont.—Beeby & Aikins, Ltd., is a new firm organized here to manufacture Beeby Unity ranges and Aikins sanitary furnaces. These two products are said to be the result of two new inventions.

PLUMBERS ASK INCREASE

Peterboro, Ont.—Journeymen plumbers here have notified their employers of an increase of 15 cents an hour in the scale, bringing it up to 90 cents, effective on the 1st of May. The rate has been 75 cents an hour. The increase in the new demand is 20 per cent. Last year the scale was raised from 60 cents to 75 cents an hour or 25 per cent.

A BENCH IN A BATH TUB

By designing a bathtub in such form that its occupant takes a sitting instead of a reclining position, a plumbing-supply manufacturer is able to offer a new article possessing a number of advantages. The entire tub measures only 44 inches long and 30 inches wide, with a well at one end 24 inches deep, and a ledge at the other end forming a seat above which the depth is 15 inches. The well may be used alone for children or as a foot bath, the seat ledge remaining dry.

SARNIA ENGINEER RESIGNS

Sarnia, Ont.—John A. Baird, city engineer, has tendered his resignation to the city council.

WATERWORKS MACHINERY

AT NEWMARKET SMASHED

Newmarket, Ont.—One of the compressors in the pumping station here was completely wrecked. To replace it will cost the town \$1,500. The town water is pumped from artesian wells by compressed air. A valve worked loose on one compressor and before anything could be done the machine was shattered.

NEW PROPOSALS FOR DRAINAGE

Winnipeg.—The Provincial Drainage Commission was instructed by the legislative committee on municipal affairs to draft amendments to the Drainage Act, presenting its views and having due regard to the discussions and conclusions already reached by the committee, with the understanding that the amendments should not go before the legislature until they have been canvassed thoroughly in committee.

NEW YORK PLUMBER PAYS FINE

New York.—A \$10,000 fine—the largest given any master plumber indicted during the building trust investigation—was imposed on the W. G. Cornell Co. for violation of the State Anti-Trust Act. At the same time Edward L. Slosson, a member of the firm, was sentenced to the Tombs Prison for ten days.

Both Slosson and the corporation pleaded guilty several weeks ago to having subscribed to the "code of practice" alleged to be operated by master plumbers in connection with bids.

PLUMBERS ARE OFFICIALS OF NEW WASHER COMPANY

Hamilton, Ont.—In the last issue of the Canadian Gazette it was announced that the Coffield Washer Co. of Canada, Ltd., had been granted a charter. Harry Bloom and Walter C. Brittan, of Bloom & Brittan, local plumbers, are officials of the new company, which will manufacture Coffield electric washing machines. The company has leased the top floor of the Bloom & Brittan building, 16 and 18 Macnab Street North, and the manufacture of the new machine is expected to take place in from four to six weeks. A staff of about fifty men will be given employment.

Harry Bloom is the president of the new concern, and J. L. Coffield, the inventor of the new machine, is a director. The new machine is considered by officials of the company as a new development in washing machine construction.

Mr. Bloom stated that the company was composed of local capital only, and the headquarters of the concern would be kept in Hamilton.

PIECE WORK WOULD RESULT IN POOR CRAFTSMANSHIP

Winnipeg.—No official report concerning the decision made by the Master Plumbers' Association in Montreal has

been received by the local organization, according to statements made by members of Local 254 of the Plumbers' Union.

The men asserted that only evil could result from the application of the piece-work system, urged by the Montreal plumbers, as a plumber would contract to have the plumbing materials supplied by the builder, thus receiving the work entirely in his own hands and also giving the individual plumber the position of a master plumber. Under such conditions, the man with the greatest physical capacity for work would have the advantage, the workmanship would become slipshod, and the union would be disintegrated.

NEW MEDICAL BUILDING FOR MONTREAL

Montreal.—Montreal is to have another new structure on one of the main thoroughfares. A ten-story building devoted exclusively to medical men and specialists in allied professions will be erected at the corner of St. Catherine and Crescent streets. Construction will begin next June, and the building will be ready for occupancy in May, 1923. When completed, Montreal will have the second largest medical building in the United States and Canada.

Each office will be equipped with special lighting fixtures designed for the tenants' use. The lavatories and plumbing will be arranged for medical men in accordance with the best modern practice. Compressed air will be supplied to each office where required.

MONTREAL'S NEW HOTEL

Montreal.—Work on Montreal's new hotel is expected to commence this month, the contract now being awarded. The name of the firm whose tender has been accepted is withheld, pending the conclusion of the necessary formalities.

It is understood that Canadian labor and Canadian material will be used in the construction as far as possible, and some 2,000 men will in all probability be employed, the majority of these drawn from Montreal and district.

The building cost is estimated at \$6,000,000. The building will contain 1,050 rooms, 30 stores and 40 offices. The construction will be steel and fireproof, with a grey stone and grey brick exterior. Provision will also be made for a roof garden and a banqueting hall capable of seating 2,000 for conventions.

WESTERN ONTARIO NEWS

J. L. Heureux, of Windsor, Ont., has been awarded the contract at \$37,827 for new separate school. Other tenderers were: R. Paddon & Co., \$37,859; W. J. McGuire, \$38,865. Mr. Heureux's contract is for heating, plumbing and ventilating.

Ald. Frank E. Harley, Gerrard St., London, Ont., has plans for a new residence to cost \$20,000 and wants prices on hot water heating, plumbing and electrical work.

Charles Lynch, Erieau, Ont., is preparing for new dwelling and wants prices on plumbing and heating.

The council at Simcoe, Ont., has accepted petitions for new sanitary sewers on Norfolk and Talbot streets and has authorized the preparation of plans for same.

W. T. Spettigu, of 261 Hill St., London, Ont., will commence work shortly on two residences to cost \$14,000 and wants prices on hot air heating, plumbing and electrical work.

J. C. Mann, of Windsor, Ont., has leased premises on Talbot St., at Essex, Ont., and will open up a plumbing shop about the middle of the month.

Charles Holtry, Essex, Ont., is preparing plans for new bungalow to cost \$4,000 and wants prices on heating, plumbing and electrical work.

Lee Walden, 160 Oxford St., London, Ont., wants prices at once on hot air heating, plumbing and electrical work for new \$8,000 residence.

W. Snell, 917 William St., London, Ont., has started work on \$5,000 residence. Prices wanted on hot air heating, plumbing and electrical work.

Peter Osterhout, Division Road, Cotnam, Ont., has commenced work on \$4,000 residence and wants prices on heating and plumbing.

J. C. Mann, of Essex, Ont., was awarded contract for laying new water services for the town at the following figures: $\frac{1}{2}$ ", 4 feet, \$15.30 and 60 cents per foot for balance; $\frac{3}{4}$ ", 4 feet, \$15.80 and 65 cents a foot for balance; 1", 4 feet, \$17.60 and 75 cents a foot, all repair work on the basis of \$1 per hour.

Charles Tuckey, Lobo, P.Q., wants prices on heating, plumbing and electrical work for new \$6,000 residence.

R. Fullerton, Cedar Springs, Ont., wants prices at once on heating and plumbing for new \$5,000 residence to be built this spring.

Mrs. Peter Cain, of Port Lambton, Ont., is preparing plans for \$4,000 bungalow and wants prices on heating and plumbing.

Gordon Porter, plumber and gas fitter, has moved to Sarnia from Wallaceburg. Mr. Porter was a former resident of Simcoe, Ont.

John Jenner, of Port Lambton, Ont., has started new \$5,000 bungalow and wants prices on heating and plumbing.

H. J. Castle, 713 Central Ave., London, Ont., wants prices on hot air heating, plumbing and electrical work in connection with new \$4,500 residence.

George A. Waddell, 37 Glenwood, Ave., London, Ont., is erecting new \$3,500 dwelling and wants prices on hot air heating, plumbing and electrical work.

F. G. Heximer, 32 Pipe Line Road, London, Ont., wants prices on hot air heating, plumbing and electrical work for new \$7,000 residence.

George Johnston, of Kincardine, Ont., wants prices on hot air heating, plumbing and electrical work for two bungalows to be erected this spring.

Gordon Ross, of Kincardine, Ont., is preparing plans for business block containing two stores to cost \$15,000 and wants prices on heating and electrical work.

A Garber, Tiverton Creamery, Tiverton, Ont., is preparing plans for new building to be erected at Kincardine at a cost of \$15,000. Lower floor to be used for creamery and upper story for dwelling. Prices wanted on plumbing, heating and electrical work.

Charles Woods, 193 Wharncliffe Road, London, wants prices on hot air heating, plumbing and electrical work for a new \$4,000 dwelling.

W. J. Wilkey, 510 Quebec street, London, has commenced excavation for two residences to cost \$9,000. Owner wants prices on hot air heating, plumbing and electrical work.

N. Blackwell, 83 Sterling street, London, wants prices on plumbing, hot air heating and electrical work for a \$4,000 residence.

George Reid, Walker street, London, Ont., is excavating for \$3,500 residence and wants prices on heating, plumbing and electrical work.

Wm. Schildroth, of New Hamburg, wants prices on hot air heating and plumbing for two residences to cost \$7,500.

Brewer and Harrison, of Parkhill, have been awarded the contract for plumbing and galvanized iron work for new \$15,000 church at Brinsley.

Work will be commenced shortly at London, Ont., on a new three-storey warehouse for Crane, Limited, of Montreal, to handle hardware and plumbing supplies for Western Ontario.

The Wright Teale Co. of London, Ont., has been awarded the plumbing and heating contracts in connection with remodelling of office building for Dr. Babb.

The London Advertiser Co., London, Ont., wants prices immediately on steam heating system for a new office building. W. G. Murray, Dominion Savings Building, is the architect.

John H. Ranesbottom, Walkerton, Ont., is preparing plans for new \$5,000 bungalow and wants prices at once on hot air heating, plumbing and electrical equipment.

Separate tenders for heating, plumbing and electrical work and also for sheet metal work in connection with new \$25,000 memorial wing for hospital will be received until April 18 by James B. Watson, chairman of the hospital board at Kincardine, Ont.

Chester C. Woods, Sarnia, Ont., will receive tenders until April 26 for heating and plumbing in connection with new school for S.S. No. 18, Plympton township.

Prices are wanted immediately by the building committee of Christ Church, Amherstburg, C. A. Cuddy, chairman, on hot air heating, plumbing and electrical work in connection with new \$10,000 parish hall.

The Molsons Bank, Amherstburg, Ont., W. S. Falls, manager, has purchased property which will be completely remodelled. New heating, plumbing and electrical work.

Raymond Ryan, Amherstburg, Ont., wants prices immediately on hot air heating, plumbing and electrical work for new \$4,500 residence.

Claude Chapman, sanitary and heating engineer, Amherstburg, Ont., is moving this week to a new location in the Hunt Block. He plans to fit up a thoroughly modern plumbing shop and show rooms.

Negotiations are under way at Amherstburg, Ont., for the purchase by the Hayes Ruppell Co., of Grand Rapids, manufacturers of closet tanks, for the purchase of the old Two-in-One Auto factory for their Canadian branch.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

A REVISION of discounts in pipe fittings with lower prices is the chief feature of interest in plumbing and steam fitting supplies up to date. Quotations on most lines are holding at recent changes and few changes are noted. A small decline is noted on some sizes of soil pipe. Among the declines of a smaller nature are pipe wrenches and boiler rivets. Prices are being held on enamelled wares, radiation, range boilers, conductor pipe, sheets and plates, bar iron, lead products and wrought pipe. The scrap metal market is in a very dull state with small signs of improvement. Ingot metals, while little changed, are affected by the strike situation in Great Britain.

In the primary steel markets the chief feature is the action of the U.S. Steel Corporation in announcing new and lower prices on many of their products, and while the reductions do not in all cases reach the extreme low levels which have been quoted by some of the independents and which were not justified by conditions within the steel industry the new prices are looked upon to stabilize the market. Whether they will result in a greater buying activity remains to be seen. In domestic wholesale circles there is a distinctly better feeling, and though the increase in business has been small there are signs of improvement and a more hopeful outlook is general.

MONTREAL MARKETS

MONTREAL, April 13.—There are a few reductions of interest to the plumbers and steamfitters in this week's market. Soil pipe, from 2 to 6 inches, have changed discounts, making a small decline. Pipe fittings are quoted lower in many kinds. In tools, Stillson wrenches of Canadian pattern are now 50% off list. There is one advance of a smaller nature, cotton wipers are 3 cents higher than formerly. Boilers and radiators are holding at decline of last month, enamelled ware, range boilers, eavestrough and conductor pipe, sheets, bar iron and steel, lead products and wrought pipe are all unchanged. There is a decided change in the feeling of trade and a much steadier market in general is noted. Waste materials are dull and quotations are showing at a sharp decline. Ingot metals show an improvement.

Stillson Wrenches 50% Off

Montreal. Through a change in discounts, Stillson wrenches of the Canadian pattern are now lowered in price. The new discount is 50 per cent. off list, formerly being 45 per cent.

Bigger Sales of Metal Lath

Montreal. Business in metal lath has opened up considerably during the past two weeks, and dealers who handle this product state that the open weather which has caused a better feeling in all building materials has benefited this line. Prices are unchanged and are as follows:

METAL LATH.

Painted—	
26 gauge, sq. yd.	0 35
24 gauge, sq. yd.	0 39
23 gauge, sq. yd.	0 45
Galvanized, 11c per sq. yd. extra.	
Discount, 10%.	

Boilers and Radiation Hold

Montreal. A better feeling exists in the trade on hot water and steam boilers and radiators, and with building operations now in sight, an increased activity is

expected. At present there are few actual sales being made, but prospects are encouraging. There has been no further change in prices since the decline of last month, and following are quotations:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount. 48% for hot water and 49% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 45%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10. 55% off list.

Square or sectional hot water or steam boilers, 15-in., 5%.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in., 5% off list.

Square or sectional steam boilers, 19-in. to 36-in., 5%. Ontario Government trimmings, net list.

Round steam boilers, standard trimmings, 15 per cent. off. Ontario Government trimmings, 10%.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Waste Held; Wipers Advance

Montreal.

There has been no change made in

the prices of either white or colored waste, but wipers show an advance of three cents on both white and colored. White cotton is now quoted at 23 cents per pound and colored at 18 cents. This advance is shown, notwithstanding reductions have been given on many lines of cotton goods recently. There has been a steady demand for wastes, and a good improvement has been shown since the beginning of the month. Following are the present prices:

Cream, Polishing	0 22
WHITE

White Cotton	0 23
Colored Cotton	0 18
Above lines subject to trade discount for quantity.	

Sheets are Backward

Montreal.

There is a little better demand for sheets, both black and galvanized, but hardly worthy of note. Present stocks are fully ample, and jobbers are not encouraged to buy except in accordance with sales now being made. The report of an advance in steel prices in the United States did not come as a surprise to many dealers, and one local jobber stated he expected it, and wondered it did not come at an earlier date. It is quite apparent that recent quotations from the Pittsburgh fields were be-

low productive costs, and failed to locate any revival or activity in their output. Any action taken by the Steel Corporation is looked for with general interest. However, predictions are not at present given. Local prices are nominally unchanged this week, but are quoted as having a range, as a variation exists from different quarters. Following are the quotations:

PLATES—	
10 gauge	6 25
12 gauge	6 30
14 gauge	6 45
16 gauge	6 55

BLACK SHEETS—	
10 gauge	6 50
12 gauge	6 55
14 gauge	6 60
16 gauge	6 80
18-20 gauge	7 95
22-24 gauge	8 00
26 gauge	8 10
28 gauge	8 20
Sheets 36 in. wide, 10c. per 100 lbs. extra.	

GALVANIZED SHEETS—	
U.S. Standard—	
10½ oz.	10 25
28 gauge	9 75
26 gauge	9 50
22 and 24 gauge	9 35
20 gauge	9 15
18 gauge	9 15
16 gauge	9 00

English Standard—	
28 gauge	10 75
26 gauge	10 50
24 gauge	9 90
22 gauge	9 55
18 and 20 gauge	8 85

NOTE—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Bars Little More Active

Montreal.

The demand for iron and steel bars is still light, considering the season of the year, only sorting orders being received. With the curtailment of pig iron in the United States comes the report of an advance in steel quotations in many quarters, thus causing a little different aspect on the future trend of iron and steel products. However, it is believed this will have no immediate effect on present quotations, but will in all likelihood be the end of the recent price-cutting from that source. Any action which the Steel Corporation will take will be interesting, but there is no indication that much change in quotations will be made in the near future. Following are present local quotations:

Common bar iron, 100 lbs.	4 00
Refined iron	5 50
Iron finish machinery steel	4 05
Mild steel	4 00
Single reeled machinery steel	6 80
Band steel	4 00
Spring steel	6 00
Sleighshoe steel	4 00
Tire steel	4 20
Toe calk steel	4 90
Harrow tooth steel	4 15
Mining tooth steel, per lb.	0 23
Black Diamond tool and cast steel, per lb.	0 23

NOTE—Refined iron is approximately \$1.50 per 100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Flats, iron and steel, 3-16 and thinner, 50c per 100 lbs. extra.

Waste Materials Decline

Montreal.

A sharp decline is made on many metals in the scrap market. The long period of inactivity has shown very

little improvement, notwithstanding the open weather. Inquiries are not coming to hand in seasonable numbers, and dealers state that lower prices may have some tendency towards opening the situation, but with the steel production as it now stands, little improvement may be expected in the ferrous metals. Non-ferrous metals are much in the same position, and remain very quiet. Following are the nominal quotations:

Dealer's Buying Prices.	
Automobile tires	0 75
Yellow brass	0 05
Red brass	0.08½
Light brass	0 04
Scrap zinc	0 04
Lead, heavy	0.03½
Lead, tea	0 02
Light copper	0 08
Heavy copper	0.10½
Wrought iron, R. Rd., No. 1 per gr. ton	12 00
Malleable scrap (ton)	11 50
Pipe scrap (ton)	8 00
Heavy melting steel	8 50
No. 2 busheling	4 00
Boiler plate	0 08
Stove plate (ton)	18 00
No. 1 machinery cast	25 00

Corrugated Sheets More Active

Montreal.

In line with other building materials, corrugated sheets have shown considerable improvement in recent few weeks. The movement, however, is confined to the lighter gauges, 28 and 26 gauge being the sellers. Although sales are still behind last year, the increased sales since the beginning of the month are causing dealers to be much more hopeful than they were previously. List prices are unchanged, but slightly better quotations are given in some quarters for quantity. Following are the list prices:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	9 50
No. 26 gauge	10 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00
Less 7½%.	
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.	

Compression Goods Hold

Montreal.

Prices are remaining steady on the different lines of compression goods. The business in these continues fair, and brass values have shown considerable activity during the past few weeks. Following are the present quotations:

Compression work, standard	34%
Fuller work, standard	30%
Bath cocks, compression	25%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard	34%
Roundway stop and waste cocks, standard	34%
Brass steam cocks, standard	10%
Radiator valves, standard	23%
Do., removable disc	38%
Globe, angle and check valves, standard	5%
Gate or straightway	Net
Jenkins globe	10%
Jenkins gate valves	10%

Slow Improvement in Boiler Tubes

Montreal.

There is a continued slight improvement in sales of boiler tubes, but the demand is of a sorting order for immediate repair work, and along with other lines of iron and steel, large orders are

still held back. Quotations are unchanged and are as follows:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00
1½ inch	27 25
2 inch	26 25
2½ inch	20 75	27 00
3 inch	29 25	24 50
3½ inch	33 00	28 50
4 inch	44 75	32 50
.....	49 25	40 00
.....	63 50	43 50
.....	85 00	55 50

Eavestrough Now Active

Montreal.

The open weather has certainly benefited the movement of eavestrough, conductor pipe, etc., one dealer stating, "The last two weeks has shown a decided improvement, and sales are quite up to normal." The bookings that were placed other years during the winter and early spring months were not made to any extent this year, dealers apparently preferring to wait until the actual demand was shown. Now this demand has come with the weather, allowing outside work, and sales should be in good volume throughout the early summer months at least. Following are the unchanged prices:

EAVETROUGH—

O.G. Square Bead—	Per 100 ft.	Per 100 ft.
8 in.	15 90	15 inch 28 80
10 in.	17 70	18 inch 36 80
12 in.	21 20
O.G. Round, and Half Round—		
8 in.	16 90	15 inch 29 80
10 in.	18 70	18 inch 37 80
12 in.	22 20
Discount 50/10% off list.		

CONDUCTOR PIPE—

	Per 100 Ft.
2 in.	18 40
3 in.	22 30
4 in.	29 60
5 in.	40 00
6 in.	49 00
Discount 50/10% off.	

CONDUCTOR ELBOWS—

Plain round or round corrugated—	
2 inch	5 25
3 inch	6 00
4 inch	10 50
5 inch	24 00
6 inch	29 00
Discount 50% off.	

Range Boilers Steady

Montreal.

Range boilers are selling in small numbers, orders being for one or two only in most cases, showing that dealers are only buying as the actual requirement demands. However, with the help of any improvement in building, dealers are expecting a continued gradual increase in business. Quotations are as follows:

RANGE BOILERS—	Stand.	Ex.	Hvy.
30-gallon	13 00	15 00
35-gallon	15 00
40-gallon	17 00	19 00
52-gallon	24 00
66-gallon	32 00
82-gallon	42 00
100-gallon	50 00
120-gallon	60 00

Enamelled Ware Improves

Montreal.

The increased business in enamelled ware of the different lines is of a very gradual nature, and sales are still backward. Jobbers are anticipating a revival as soon as the many contracts are let, that they are now figuring. In fact, a decided increase in building prospects has opened up in recent weeks, and this

will have favorable results in enamelled ware at future dates. Following are present quotations, which are unchanged:

Sinks, roll rim, 18x30 in.	18 40
Sinks, flat rim—	
16 x 24	1 only 2 only 3 only
18 x 30	\$6 00 \$5 92 \$5 84
18 x 24	6 96 6 88 6 80
20 x 30	7 92 7 84 7 76
Bath tubs, roll rim, 4, 4½, 5 feet, 34 to 30 in. wide	41 12

Closets Make Slow Progress

Montreal. Conditions on closets are reported to be showing a very gradual improvement. The future building activities that have become more prominent in the past few weeks are now looked upon as being very promising to the future business. Quotations are the following:

Closet, standard outfit	\$32 00
Do., with post hinge seat	33 00
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	17 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies, less seat	19 00

Soil Pipe Discounts Changed

Montreal. There has been a change in discounts on soil pipe, thus lowering quotations. The reduction is from 5 to 6 per cent. on the 2-in. to 6-in. pipe, while 8-in. remains unchanged. There has been no change made in fittings. Business shows a slight improvement, but sales are still small. Following are the new quotations:

SOIL PIPE (medium and extra heavy)—
2, 3, 15%; 5 and 6-inch, 20% discount.
4-inch, 25% discount.
8 inch, add 20% to list.

FITTINGS—
2 to 6 inch fittings, 40 per cent. discount.
8-inch, net.

Wrought Pipe Fairly Active

Montreal. There continues a better feeling on wrought iron and steel pipe, and deliveries are now being forwarded in good numbers. The volume of business in piping has kept up fairly well all during the early months of the year, due to dealers being able to replenish their stocks after the shortage the latter end of last year. List No. 50 is now the selling basis, effective March 28th, and is as follows:

Standard Butt-weld Pipe S/C					
Per 100 feet.					
Size	Steel		Gen. Wrot. Iron		
	Blk.	Galv.	Blk.	Galv.	
½ in.	\$ 6 50	\$ 8 50	\$	\$

10 L in.	2 54	3 18	3 41	4 05	
10 in.	3 28	4 10	4 39	5 21	

Pipe Fittings Slightly Lower

Montreal. Pipe fittings of many kinds will now cost a little less through a change in discounts. In most cases the reduction is around 2 per cent, although flanges are changed from 20 to 27 per cent. off list. Pound goods were previously quoted add 17½ per cent., but now are shown at add 10 per cent. A good sorting business continues, with stocks now in good shape in practically all kinds and sizes. The new discounts are as follows:

Bushings, cast	25%
Do., malleable	25%
Flanges	27%
Plugs	22½%
Flange Unions	20%
Malleable Unions	40%
Dart Unions, black	20%
Do., galvanized	add 5%
Nipples, ½ to 4" close and short	40%
Do., long	50%
Do., ½ to 8" close and short	30%
Do., long	40%
Couplings, 4" and under	20%
Do., 4½" and larger	Net list
Pound Goods—	
Class B	Blk. 0 20 Galv. 0 28
Class C	0 13 0 20
Add 10%.	

No Change in Lead Products

Montreal. Prices on all lines of lead products are unchanged. With the firming of pig lead, these products have been able to hold on a steady market, and although a reaction would not be surprising to some dealers, lower prices are thought unlikely in the finished products for some little time at least. There is a gradual increase in the demand for all lines, and jobbers are now waiting for the building trade to open, with ample stocks on hand. Prices are as follows:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs, sq. ft., lb.	0 10½
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼ lb. extra and cut sheets to size, ¼ lb. extra.	
Solder, guaranteed, lb.	0 26

Do., strictly, lb.	0 24
Do., commercial, lb.	0 21
Do., wiping, lb.	0 21½
Do., wire, lb.	0 34
Zinc sheets, casks	0 14
Do., broken lots	0 15½

Oakum Shows No Change

Montreal. There is a little variance in quotations on plumbers' oakum. However, \$4.50 per 50-pound bale seems to be the general price, showing no change from last quotations. One cent per pound is charged extra for broken quantities.

Ingot Metals Hold Well

Montreal. Markets on the different ingot metals are holding remarkably well. The London market also continues to advance, despite discouraging news from that source. It is unlikely, however, that this advance will continue, but it is generally felt that the bottom has been reached on practically all ingots, and any changes in the future will be for the better.

TIN.—This metal has advanced steadily in London and has now touched the highest point since the latter part of February. Whether this will be maintained is hard to determine, but this is a decided improvement in tin, as last week it was reported easier. New York continues to hold firm. Local prices are a little higher at 6½ cents.

COPPER.—Although copper has been a little easier in New York owing to the fear of exports being cut off, the trade was rather encouraged by the news of an order of 2,000,000 pounds being placed by Germany. With production curtailed as it is, this may have a stimulating effect on the market. Local prices are unchanged at 17¼ cents for casting and 18 cents for electro.

SPELTER.—The United States markets remain unchanged on spelter, but a firmer tone has been shown in London. It is generally felt this metal should continue to improve. Local price unchanged at 8½ cents.

LEAD. — Lead shows continued strength in London with steady advances being made. Opinions differ as to the future of this metal, and some express they would not be surprised if a reaction would set in. Local quotations are a little easier at 6½ cents.

ANTIMONY.—Stocks of antimony are still quite heavy, while the market remains very dull. Chinese antimony is quoted at 7½ cents, high grade English 8½ cents.

ALUMINUM.—Business is still reported dull in aluminum, with price remaining unchanged at 35 cents.

TORONTO MARKETS

TORONTO, April 13.—Pipe fittings provide the chief feature of the price changes this time in plumbing and steam fitting lines and the bulk of these goods are holding at recent changes. Sheet prices are showing a few reductions and declines have been made in some lines of range boilers. Pipe wrenches are lower in price. Quotations on wrought pipe, corrugated sheets, conductor pipe and eavestrough, compression goods, lead products, radiation, bar iron and steel and boiler tubes show no changes since the last report. Prices on enamelled wares and closets are also held. While business has not picked up to any extent yet, there is said to be a distinct improvement and prospects look brighter for the coming season.

No Further Pipe Changes

Toronto.

Some small increases in the demand for wrought iron pipe are reported, but taken altogether sales are small and buying is mostly for actual needs. Buyers do not seem to believe that prices are yet on a firm basis and are not stocking up to any extent, and with stocks in better shape there is not the difficulty in getting orders filled that was experienced a year ago. Prices are holding at the changes of two weeks back and list No. 50, which follows, is still in effect.

Price List No. 50. March 28th, 1921

Pipe Fittings Revised

Toronto.

Some revisions have been made in prices of pipe fittings since the last market report and reductions varying from 5 to 10 or 12 per cent. have taken place. Cast iron fittings are now quoted at 20 per cent. off list. The old discount was 15 per cent. Bushings go from 20 to 30 per cent. off. Unions from 30 and 35 per cent. to 35 and 40 per cent. Dart unions also show a decline. Cast plugs are quoted at 27 1/2 per cent. Pound goods, class B and C, are slightly reduced. Sales on fittings are still light and buying is usually for present requirements. Stocks are in good shape now. The following are the present quotations:

Cast iron fittings	20%
Plugs, cast	27 1/2%

Do., solid	10%
Do., countersunk	Net list
Bushings	30%
Unions, 1/4 in. to 2 in.	40%
Do., 1/4 in., 2 1/2 in. to 4 in.	35%
Dart-Unions, blk., 1/4 in. to 2 in.	29%
Do., 1/4 in., 2 1/2 in. to 4 in.	14%
Do., galvanized, add to black	30%
Wrought Nipples—	
Close and short, 4" and under	40%
Do., 4 1/2" and larger	30%
Long, 4" and under	50%
Do., 4 1/2" and larger	40%
Running thread, 4" and under	20%
Do., 4 1/2" and larger	...
Wrought Couplings—	
Standard, 4" and under	20%
Do., 4 1/2" and larger	Net

MALLEABLE FITTINGS

Class A	0 60	0 75
Class B	0 24	0 33
Class C	0 15	0 24

Soil Pipe Still Slow

Toronto.

A little more demand is reported for soil pipe and fittings, but the usual spring activity has not yet been felt. Prices are holding unchanged, but if revisions are made it is believed they are likely to be downward. Supplies are ample for all normal demands. The following are current quotations:

- 2 and 3 inch, 10%.
- 4 inch, 20%.
- 5 and 6 inch, 15%.
- 8 inch, add 5%.

FITTINGS—

- 2 to 6 inch fittings, 40%.
- 8 inch fittings, plus 5%.

Boiler Rivets Reduced

Toronto.

There has been a reduction in the price of boiler rivets and these are now quoted at \$6.50 base.

Pipe Wrenches Lower

Toronto.

Reductions have been made in the price of some makes of pipe wrenches and the Canadian make of Stillson wrench is now quoted at 50 per cent. off list, while the Trimo wrench is also lower. The new net prices of each are as follows:

TRIMO WRENCHES—Net—8 in., \$16.90 per doz.; 10 in., \$18.80; 14 in., \$26.25; 18 in., \$37.50; 24 in., \$54.50.

STILLSON WRENCHES—Net prices—6 in., \$1 each; 8 in., \$1.13; 10 in., \$1.25; 14 in., \$1.75; 18 in., \$3.63; 36 in., \$6.75.

Canada Plate Easier

Toronto.

Lower quotations are in force on Canada plate and \$9.50 to \$9.75 is the price named on boxes of 52 sheets. There is not much demand at the present time and stocks are ample for all requirements. From present indications stocks this fall should be in good shape and there should not be the shortage of last

season. Tin plate prices are also being quoted lower, and the tendency is downwards. It is reported that Welsh tin plate is being offered at New York at over \$1 per box below the Pittsburgh quotations.

Compression Work Steady

Toronto.

No changes are reported in the prices of compression work, although some look for a downward tendency on valves following declines in the prices of these goods in the U.S. While no great improvement in sales is noted there is a steady growth in each month's business. Quotations remain as follows:

Compression work, standard	84%
Fuller work, standard	30%
Bath cocks, compression	25%
Do., Fuller	25%
Flatway stop and waste cocks, standard	34%
Roundaway stop and waste cocks, stand.	34%
Brass steam cocks, standard	10%
Globe, angle and check valves, standard	5%
J. M. T.	10%
J.M.T. C.	15%
J.M.T. Gate Valves	15%
Gate or straightway	7/10%
Jenkins Globe	10%
Radiator valves, standard	23%
Do., removable discs	38%
Emco J. D. Valves	10%
Emco Check Valves	10%
Webber Gate Valves	15%

Range Boilers Move Slowly

Toronto.

There is a small but fairly steady sale now for range boilers, but jobbers state that sales are mostly for present requirements. The electric welded boiler is meeting with a good demand throughout the trade. The standard 30-gallon size in this variety is being quoted at \$11.50 and \$11.75, and sales are being made at \$12.50 for the standard riveted boiler. The following are quotations:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	12 50	15 00
35 gallon	15 00	17 00
40 gallon	17 00	19 00
52 gallon	24 00	28 00
66 gallon	32 00	38 00
82 gallon	40 00	50 00
100 gallon	50 00	60 00
120 gallon	60 00	70 00

Better Feeling Regarding Wares

Toronto.

Enamelled wares are still moving out slowly, and although some improvement is shown business is "scrappy," as one wholesaler expressed it. An increase in sales is looked for within the next few weeks and stocks are said to be ready to meet it. There seems to be a better feeling regarding future prospects than was evident a short while back. Quotations are unchanged and are the following:

Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5 1/2 ft.	57 10
All Steel Enamel Baths, 4, 4 1/2 or 5 ft., net	\$16 25
Do., do., 5 1/2 ft., net	17 50
Lavatories—	
17x10" Apron F139 or P4045	15 30

Sinks, Roll Rim, 16 x 24 in.	18 10
Do., 18 x 30 in.	23 00
Do., 20 x 30 in.	24 70
Sinks, Flat Rim—	1 only 2 only 3 only
16 x 24	\$7 60 \$7 70 \$7 80
18 x 30	8 50 8 60 8 70
20 x 30	9 70 9 80 9 90
All above list except lines marked net.	
Discount 20% off these prices.	

Little Change in Closets

Toronto. Business is still rather backward in these lines, although some jobbers state that there is a slight revival in demand, but they do not expect much increase in activity until new construction gets under way. Prices are unchanged and are the following:

Closet, standard outfit	\$32 00
Do., with post hinge seat	33 00
Do., white vitro, vitreous china or enamel-iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for ½ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 80
Do., oak, or oak-vitro tank, with fittings, less seat	16 50
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies	18 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 40

Radiator Prices Held

Toronto. Although there has not been much change in the demand for radiation manufacturers are optimistic and believe that as the season advances business will pick up in these lines. Prices are holding at the changes noted in the last issue and 48 per cent. off list is quoted for hot water and 49 for steam. Wall radiators are now 45 per cent. off list. The standard lists are the following:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
 38 in., \$1: 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
 Discount 48% for hot water and 49% for steam.
 Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 45%.

No Change in Bars

Toronto. No further changes have been reported in bar iron and steel prices. Business is stated by wholesalers to be light and showing few signs of immediate improvement. Consumers are not showing any anxiety to increase stocks or buy beyond their actual needs, and the question of price enters into it hardly at all. What result the change in prices by the Steel Corporation will have on the market is unknown, but prior to the announcement of that change mills in the Youngstown district had advanced prices on steel bars, while producers in the Chicago district had reduced iron bars \$6 a ton. The following are quotations on quantities here:

IRON AND STEEL

Common bar steel, 3-16 in. and lighter	\$ 4 50
Do., ¼ in. and heavier	4 00
Common bar iron, 3-16 in. and lighter	4 50
Do., ¼ in. and heavier	4 00
Angle base	4 10
Horseshoe iron	6 00
Tire steel	5 95
Band steel	4 50
Spring steel	12 75
Mining drill steel	23 00
Crucible cast sheet steel	35 00
Sheet cast steel	35 00
Sleighshoe steel	4 50
Norway iron	15 00
Toe caulk iron	6 70
Hoop steel	6 00

Lead Products are Steadier

Toronto. There is little change reported in prices of lead and zinc products. The market for lead and spelter remains practically unchanged, although lead is firmer. Production of pig lead has been curtailed and the supplies on hand have been materially reduced. Many are of the opinion that lead products have practically reached the bottom of the decline and think that future tendencies will be upwards instead of down. Business continues fairly active considering conditions. The following are present quotations:

Lead pipe, list, per lb.	0 12½
Lead waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to discount of 10%.	
Lead traps and bends	10%
Lead sheets, 4 to 6 lbs. sq. ft., in rolls, lb.	0 09½
Cut sheets ½ c to ¾ c lb. extra and cut sheets to size 1c lb. extra.	
Solder, wire, lb.	0 34
Do., 40-60	0 26½
Do., 50-50	0 29
Do., strictly, lb.	0 24
Do., commercial, lb.	0 22
Do., guaranteed, lb.	0 27
Do., wiping, lb.	0 22
Zinc sheets, per lb.	0 16
Calking lead	0 08 0 09

Conductor Elbows Improved

Toronto. With a better demand for conductor pipe there is also more activity in crimped and corrugated elbows. Quotations remain unchanged and are the following:

2 inch, list	\$5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 50%.	

Eavestrough Moving Better

Toronto. There has been a better sale for eavestrough and conductor pipe in the past two weeks and dealers report more repair work being executed and more inquiries in hand. From now on sales in these lines should show improvement. Prices are holding unchanged at the levels set early in the present year. Following are present quotations:

TROUGH (Eave)			
O. G., Square Bead and half round.		Size in	
girth:			
	Per 100 ft.		Per 100 ft.
8-in.....	\$15 90	15-in.....	\$23 80
10-in.....	17 70	18-in.....	36 50
12-in.....	21 20		
Less 50/10 per cent.			
PIPE (Conductor)			
Plain, round or corrugated.			
Per 100 ft. in 10 ft. lengths.			
2 in., in	10-ft. lengths, list	\$18 40
3 in., in	10-ft. lengths, list	22 30
4 in., in	10-ft. lengths, list	29 60
5 in., in	10-ft. lengths, list	40 00
6 in., in	10-ft. lengths, list	49 00
Less 50/10%.			

Corrugated Sheets Show Improvement

Toronto. A continued improvement is reported in the sales and demand for corrugated sheets and though business is not by any means heavy the growth is promising. No changes are reported in prices, which are the following:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	9 50
No. 26 gauge	10 25
No. 24 gauge	16 00
No. 22 gauge	19 00

No. 20 gauge	22 00
No. 18 gauge	28 00
Less 7½%.	

Boiler Tubes are Slow

Toronto. There has been little news to report in boiler tubes and business shows but few signs of improvement. A better demand is usually noted at this season of the year than has been experienced lately. Quotations are nominally unchanged and are as follows:

	Per 100 feet	
	\$28 00	\$....
1 inch	30 00	
1¼ inch	32 00

Furnace Sales Small

Toronto. Sales on furnaces are not heavy at this season of the year, but with new building construction starting a better movement is expected later on. Manufacturers are not overstocked and materials are more plentiful than they were last season and as the demand picks up it is believed that stocks will be in shape to meet it. Some revisions were recently made in prices of some lines of furnaces and were noted in the last issue of Sanitary Engineer.

Stove Outlook Better

Toronto. Although business is light at present in ranges and stoves there is a small and steady movement in these lines. Some lines of ranges were revised recently and reductions of about 10 per cent. were made in prices. Stocks in warehouses are not large, but are expected to be in better shape for the fall business. There is a good sale now for combination gas, coal and wood ranges and also for gas stoves. Sales, too, of electric ranges are steadily growing and the time is past when there were looked on as an experiment. Manufacturers state that their business in these lines is increasing each month.

Oakum is Unchanged

Toronto. There is no change in the quotations on plumbers' oakum and in 50 lb. bales it is priced at \$4. For small quantities prices range from 10 to 12 cents per pound.

Cotton Waste Holds

Toronto. No further changes are reported in cotton waste, but with the cotton market unsettled there is no definite future tendency. In wipers there has been some slight increase in prices made. The demand is not heavy at present. Quotations are as follows:

WASTE		
WHITE		
Cream, Polishing		0 22

Above lines subject to trade discount for quantity.

Sheet Copper Firm

Toronto.

Prices on brass and copper sheets, rods and tubing remain nominally unchanged. With production in the U.S. copper industry materially curtailed and companies producing 75 per cent. of the entire U.S. copper output now completely closed down values have been strengthened and the future tendency is towards firmer primary markets. The following are the current quotations:

BRASS—	
Sheets, base, per lb.	\$0 29
Rods, base, per pound	0 26
Tubing, base, per lb.	0 36
COPPER—	
Rods, base, per pound	0 34
Soft sheets, plain, 16-oz. and heavier, lb.	0 34
Do., plain tinned	0 40
Do., polished and tinned	0 45
Tubing	0 39

Lead and Oil Prices

Toronto.

Both linseed oil and turpentine have declined further since the last market report. Single barrels of raw linseed oil are now quoted at 77 cents per gallon and boiled at 80 cents. The price of turpentine is now 90 cents in single barrels; 15 cents per gallon extra is charged for less than barrels in both oil and turpentine, and containers are charged for. White lead in less than ton lots is still quoted at \$15.30 per 100 pounds.

Sheets and Plates Weaker

Toronto.

Prices continue to show a range in sheets and plates, and concessions are being made in prices in order to reduce stocks, and reports are current of even lower quotations on good sized orders, but buying continues light and consumers are not anxious to place orders far ahead, preferring to be able to take advantage of any possible decline in prices. The operations of the independent U. S. mills have dropped to about 25 per cent. of capacity. Further declines in sheet prices are reported from the Youngstown district, but there is little demand for either black or galvanized, and little business is being done in more than carload lots. The Steel Corporation's action in reducing prices is expected to bring stability to the market. The following is the range of quotations here:

BLACK SHEETS		
14 gauge	5 80	6 80
16 gauge	5 90	3 90
18-20 gauge	6 25	7 25
22-24 gauge	6 30	7 30
26 gauge	6 35	7 35
28 gauge	6 50	7 50
PLATES		
10 gauge	5 75	6 20
12 gauge	5 80	6 25
14 gauge	5 85	6 30
16 gauge	5 95	6 40
GALVANIZED SHEETS		
Premier and Apollo		
10 1/2 oz.	8 90	9 80

U.S. 28 gauge	8 50	9 50
U.S. 26 gauge	8 20	9 20
22 and 24 gauge	8 05	9 05
18 and 20 gauge	7 90	8 90
16 gauge	7 75	8 75
12 and 14 gauge	7 70	8 70

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charged on galvanized sheets, 10 1/2 oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Asbestos Products Firm

Toronto.

The demand for asbestos products, sheathings, roofings, asbestos shingles, etc., is not yet showing much increased activity, but with a better outlook for building than was expected earlier in the season, larger sales are anticipated. Prices show little change, and while labor costs, freights, etc., remain at present levels, there appears not much reason to expect any substantial change, it is stated.

Scrap Market Stagnant

Toronto.

Business in waste materials is reported to be almost at a standstill, and though consuming plants are operating more actively, they have sufficient supplies on hand to meet their present requirements. The line that has shown the most demand has been No. 1 cast scrap. In copper and brass the demand has been very dull. Prices are still largely nominal and the following are for fairly large quantities:

WASTE MATERIAL		
No. 2 busheling	13 00	
Stove plate, per ton	19 00	20 00
Scrap pipe	8 00	9 00
Yellow brass	6 50	7 50
Red brass	10 00	
No. 1 machinery cast	24 00	25 00
Heavy melting steel	13 50	14 50
Heavy copper	10 50	11 00
Light copper	8 00	9 00
Scrap zinc	3 75	4 25
Light brass	4 00	4 50
R.Rd. wrought iron, No. 1, per gr. ton	13 50	14 50
Heavy lead pipe	3 75	4 00
Old rubbers, boots and shoes	2 00	2 50
Overshoes, lumbermen's rub. boots	2 00	2 50
Bicycle tires	0 75	1 25
Automobile tires	0 50	1 00
Tea lead	1 75	2 00

Ingot Metals Irregular

Toronto.

The ingot metal market has been described as flabby and irregular, and trading this week has been dull. The labor situation and prospective strike in Great Britain is affecting metals in all markets and dealers are little inclined to either buy or sell until the situation has been cleared up. Prices show practically no change, quotations easing a shade one day and firming again the next but with an entire absence of demand prices seem to be immaterial.

TIN.—This metal has been dull with prices unchanged here. London markets have fluctuated with the developments of the strike, but dealers are said to be out of the market. United States markets were weak. Quotations remain at 36 cents per pound.

COPPER.—Prices continue low in copper markets, and it is regarded as having reached bottom. United States markets are dull and sales to Europe have decreased. The domestic demand is stated to be disappointing to United States producers. Local quotations are unchanged and casting copper is still at 18 cents.

LEAD.—A slightly firmer tone is shown in lead markets. The demand remains light and the spurt of buying early in the month seems to have subsided. United States markets show little change, while London is slightly firmer. Six dollars is still the local quotation.

SPELTER.—The market has been very dull in this, and transactions are few and far between. In spite of this prices have held firmly and quotations here are unchanged at \$7.25.

ANTIMONY.—The market is dull and quiet. Few inquiries come to hand and quotations are unchanged. Prices 8 to 9 cents per pound.

ALUMINUM.—Business is still quiet with the market firm. United States market reports show an advance there due to increased inquiries from consumers. Thirty cents is still quoted here.

WINNIPEG MARKETS

WINNIPEG, April 13.—Price changes have not been many since the last issue of Sanitary Engineer appeared. The chief feature is the new list on pipe, showing a reduction on black and galvanized. Range boilers have been reduced in price. New lower prices are being made on valves this week and plumbers' oakum is reduced. Quotations are held unchanged on lead goods, sheets, eavestrough and conductor pipe and soil pipe and fittings. Business on the whole has been quiet, but a slight improvement is noticed in some directions. With the coming of spring and the renewal of building construction dealers are optimistic and believe that a change in conditions will soon be felt.

Soil Pipe Firm

Winnipeg.

Soil pipe and fittings are held unchanged at the price set last month. Sales are not as large as they should be

for the time of the year. Quotations are the following:

Cast Iron Soil Pipe.—2 and 3 in., 5% off; 4 in., 17 1/2%; 5 and 6 in., 10% off; 8 in., 10% adv.
Soil Pipe Fittings.—2 to 6 in., 35% off; 8 in., 10% adv.

Niedecken Mixer for Shower Baths

The most satisfactory and economical device made for shower baths. All working parts readily accessible and easily replaced if necessary.

Operates on compression principle—mixes hot with cold water in conjunction with an absolutely dependable device to prevent scalding.

The Niedecken Mixer is immediate in action, thoroughly efficient, absolutely dependable, and gives perfect control under all conditions.

Range Boilers Reduced

Winnipeg.

The quotations on range boilers have been reduced. These goods are not moving very fast at the present time. A few orders are being shipped but they are small and are usually for immediate requirements. Wholesalers' stocks are low and the new prices are the following:

Range Boilers—30 gal., \$13; 35 gal., \$15; 40 gal., \$17; 52 gal., \$24; 66 gal., \$32; 82 gal., \$40; 100 gal., \$50; 120 gal., \$60.

Plumbers' Oakum Now Lower

Winnipeg.

Plumbers' oakum is reduced in price and is now selling at \$5 per bale.

Sheets are Unchanged

Winnipeg.

No change has been made here in the price of black or galvanized sheets during the past two weeks but a lower tendency seems probable and is expected. The present quotations are as follows:

Black 10 ga., \$7.30; 12 ga., \$7.30; 14 ga., \$7.35; 16 ga., \$7.45; 18 and 20 ga., \$7.95; 22 and 24 ga., \$8; 26 ga., \$8.05; 28 ga., \$8.40.
Galvanized 10 1/2 oz., \$10.95; 28 ga., \$10.55; 26 ga., \$9.95; 24 ga., \$9.80; 22 ga., \$9.80; 18 and 20 ga., \$9.65; 16 ga., \$9.50.

Canada Plate Prices Hold

Winnipeg.

Prices of Canada plate have not been changed since the reduction made last month. Stocks are improving but busi-

ness is quiet. The following are the present quotations:

Canada Plate.—Ordinary, 18 x 21, \$11.50 per box; 18 x 24, \$11.50; 20 x 28, \$11.75.

Eavestrough is Unchanged

Winnipeg.

With the warmer weather coming

there is a little more demand for eaves-trough and conductor pipe and elbows. Prices are unchanged and are the following:

Eavestrough.—8 in., \$7.20 per 100 ft.; 10 in., \$7.88; 12 in., \$9; 15 in., \$13.05.

Conductor Pipe.—2 in., \$9 per 100 ft.; 3 in., \$10.40; 4 in., \$13.73; 5 in., \$18.90.

Waterworks, Tenders, Construction, Contracts Awarded, Etc.

WATERWORKS, SEWERAGE, ETC.

Ailsa Craig, Ont.—W. McCallum, R. R. No. 1, Ailsa Craig, Ont., clerk East Williams Township Council, has plans and will receive tenders until April 25th for construction of drain.

Albert, N.B.—Town is constructing waterworks system at cost of \$10,000.

Street, and will receive tenders, no closing date set, for plumbing and heating.

St. Rose du Degele, Que.—Tenders will be called shortly for erection of school estimated to cost \$10,000 for school commission.

Pointe Claire, Que.—Secretary-treasurer of town council will receive tenders until April 16th for extension to sewer and waterworks system estimated to cost \$130,000. Plans with secretary-treasurer and Mr. Beauboin, engineer, 71-A St. James St., Montreal.

Saskatoon, Sask.—Dr. E. H. Oliver, principal Presbyterian College, Saskatoon, has plans and will receive tenders until April 23rd for erection of college estimated to cost \$170,000.

Strathmore, Alta.—D. French, president Great War Veterans' Association, Strathmore, will receive tenders, no closing date set, for erection of Memorial Hall estimated to cost \$10,000. Plans with Hay & Herral, architects, 312 Beveridge Building, Calgary.

CONTRACTS AWARDED

Ottawa, Ont.—H. Dagenais, 227 St. Patrick Street, general contractor for rebuilding "St. Ann's" Hall at cost of \$175,000 for Le Cercle Social St. Anne, has plumbing contract.

St. Marc, Que.—Plumbing and heating contracts for school costing \$50,000 for school commission are awarded to J. A. R. Seguin, 254 Cascades St., St. Hyacinthe.

Cap de la Madeleine, Que.—Additional contracts for erection of convent costing \$80,000 for Filles de Jesus are: Plumbing, Massicotte & Freres, Inc.

Halifax, N.S.—Contracts for altering building into offices at cost of \$10,000 for Wentzells, Ltd., Barrington Street, are: Heating, D. Cummings & Co., Water St.; plumbing, M. Day, Cornwallis Street.

Three Rivers, Que.—Plumbing contract for tenements costing \$8,000 for Patrick Parenteau, 164 St. Francois Xavier St., is awarded to Alfred Frenette, 8 Ste. Marie St.

Hamilton, Ont.—McIntosh Granite Co., 1117 Yonge St., Toronto, has plans and will receive tenders, no closing date set, for erection of office and showroom estimated to cost \$20,000.

Woodstock, Ont.—Tenders will be called shortly for heating system for county gaol and residences in connection for Oxford County Council.

THERE ARE TWO FACTORS that determine the value of a publication as an advertising medium.

Editorial excellence will indicate its influence with its readers.

Membership in the Audit Bureau of Circulations indicates its business ethics and methods.

The first shows whether the paper is worth reading.

The second shows how many people read it.

In both the advertiser is vitally interested.

Sanitary Engineer invites the closest scrutiny. Its A.B.C. report is accessible to advertisers. No other Plumbing and Heating paper in Canada has submitted its circulation records to the Audit Bureau of Circulations.

WROUGHT PIPE

The coming spring will see a big spurt in the building trade, road construction, etc. Contractors, are you ready? Our C.T. Brand of wrought pipe has been

Thoroughly Inspected

by practical, experienced men. It is tested to 600 lbs. hydraulic pressure, and branded with our trade-mark. We carry this line of reliable pipe in sizes 1/8 in. to 4 in. Black or galvanized. We also manufacture nipples and couplings, black and galvanized, in all sizes.

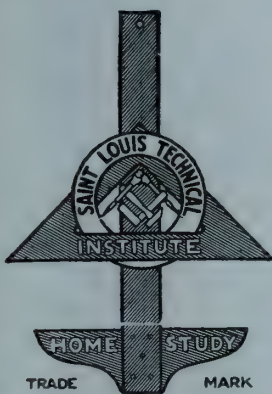

Ask your jobber for C.T. Brand of Wrought Pipe.

Cone Top Tank Bulbs

A very satisfactory product to install, as its reliable service is a constant advertisement. It is made of the most carefully selected rubber of superior quality. The top is heavily reinforced; the bottom is soft and pliable. Stocks are available in Toronto, and we can handle your order promptly, for sizes 2½", 2¾", 2¾" and 3", which are in stock.

B & C

Floor and Ceiling Plates

These are the most popular plates offered the trade in Canada. Their neat, handsome appearance gives a very pleasing finish to any job where they are used. They are made of

No. 15

No. 17

selected, cold-rolled steel, heavily copper-plated and finished in nickel-plate. The narrow pattern is suitable and effective for twin connections or one pipe work. Sizes in stock from ¼" to 4".

"Ubel"

Semi-Rotary Pump

This excellent, semi-rotary pump is a strictly "Made-in-England" product of the highest quality. The prices are competitive. Sizes ¾" to 1½" are available in stock at Toronto.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Williams' "Falcon" Drop-Forged Waste Plug Spanner

The old adage tells us "Necessity is the mother of Invention," but makes no mention of the father; presumably he is "mere man." At any rate we are rather proud to have "fathered" the invention of the useful and badly needed tool here illustrated.

It is far more efficient than any possible makeshift and the folding handle allows it to be readily carried in the pocket. The dimensions of the "finger ends" make it universally adaptable to all sizes and forms of basin and sink plugs and grates. The tool is hardened for severe service. Descriptive booklet free.

DROP-FORGINGS
often cheaper than castings
— always far superior —

A Bronze Pump with One Moving Part

When discussing Water Systems, do not put the Westco down as an ordinary system, for that is just what it *is not*.

Ordinary systems have a cumbrous tank, and a multitude of moving, wearing parts.

The Westco System has no tank, no gear, no valve, no belt.

To give double assurance of its efficiency and durability the

Westco Tankless Water System

is equipped with

**An All Bronze Pump
New Westco Two-Pole
Pressure Switch**

The system is entirely automatic and runs smoothly and noiselessly. And as *it as only one moving part* it rarely gets out of order.

The Westco Tankless Water System is being handled by dealers all over the North American continent.

It is admitted to be the best selling outfit on the market.

Write us for information regarding Dealer Co-operative Plan, or, when in Toronto, call in and see us.

Westco Pumps, Limited
707 Yonge Street
Toronto

This is a
“Q”
Foot Valve

And it Just CAN'T Leak

There are more pump troubles caused by “leaky” valves than from all the wear and tear which occurs in the average life of a pump.

The “Q” valve will overcome all priming troubles, and water once raised above it, through the suction line, will not leak out.

If you want the pumps you instal to give maximum, you will require to use the only valve on the market that **JUST CAN'T LEAK.**

Made in sizes from 1 to 8-inch.

R. McDOUGALL CO., LTD.
GALT, CANADA

Wolverine One-Piece Bath and Basin Supplies are Different

They are manufactured with the **Wolverine Patented Flexible Connections**—the only connection that is adjustable.

Tubing used is specially annealed and nickel-plated in 9-16 in. O. D. Tube and full 3/8 in. Iron Pipe Sizes.

Tail Prices not required where Wolverine Supplies are used.

Wolverine Supplies may cost a few cents per pair more than the other kind but—just think—you gain this difference and more in time and material saved and they sure have a finish that is a credit to any Bath Room.

Better order to-day.

It takes less time—by far—to install a Marvel Heater than the ordinary side arm combination. That's to your interest, Mr. Plumber.

You have at the least a dozen less connections—that saves time. You have at least a dozen less pieces of pipe, couplings and fittings—that saves money for your customer.

A Marvel Heater is delivered completely assembled ready to install—and when installed is going to reflect to your credit through the complete satisfaction it gives.

Investigate the Marvel—its low cost of operation—its high water-heating efficiency. Send for literature and dealer price list.

FOR SALE—PLUMBERS' SUPPLIES OF ALL makes, at prices that protect the plumber. American Plumbers' Supplies, 14 Craig St. West, Montreal.

FOR SALE—PLUMBING, HEATING AND Sheet Metal Business, in one of the most prosperous cities of Western Canada. Has been established eight years and has good connection in city and country. This is a splendid opportunity for one or more live wires. With stock, tools and property, or sell stock and tools and lease the property. For particulars apply Box 936, Sanitary Engineer.

Mr. Plumber

Get in touch with those farmers in your vicinity who have no water and sewage installations.

Induce them to consider the advantages of running water and modern conveniences.

Anthes Syphons are made in one piece, without seam or joint, and, operating on purely natural laws, with no moving parts to get out of order, they give great satisfaction in use.

Science has demonstrated that isolated dwellings can be made just as sanitary as communities, and the "Anthes" Syphon does for the farm what the trunk sewer does for the city.

PERFECTO BRASS GOODS

Why It Is Important that Every Piece be Perfect

IT is of little benefit to you to know that a certain percentage of the brass goods you buy will be perfect. The customer isn't buying them by the dozen or the gross. He buys one, and if the one he gets isn't perfect he is not interested in knowing that ninety-nine other ones are.

Every article you instal must be perfect. When you instal PerfectO Brass Goods, every article *is* perfect. PerfectO Brass Goods are made up of standardized parts machined by workmen who have attained the highest degree of accuracy. PerfectO quality never varies. Perfection is a certainty.

So, when you sell your customers PerfectO Brass Goods you are selling them perfect articles—articles that will give them the best service for the longest period—articles that will *satisfy* permanently.

TINKER TOM'S TALKS.

No. 309

We talked to one of the shrewdest buyers in the sheet metal business the other day about prices of Galvanized Sheets. In the last six months his house has bought sheets from U. S. mills, English Makers, and of course, Premier Made-in-Canada.

To use his own words, "We would have been ahead thousands of dollars and saved a lot of worry and bother if we'd stuck to the Canadian Sheet."

Now, sir, why not get wise? This is the time to buy. Sheets are once more in good demand. Give your jobber an order for this season's needs.

TINKER TOM.

Quality

is an essential in the upbuilding of any business with permanence. Quality is one of the three legs of the Tripod of Business. This Tripod is as necessary to the stable support of business as is the Famous Tripod of Life—the heart, lungs and brain—to human existence.

Efficiency

represents the second leg of the business tripod. Without efficiency there can be no success, because efficiency signifies a satisfactory relation between the result obtained and the effort invested. We burn so much coal to obtain a certain horsepower in steam. We invest a given sum of money in business; if the business is efficient it produces a satisfactory return.

Service

is the positive complement of Quality and Efficiency, without which they could no more stand alone than could a three-legged stool with one leg lacking. The amount of our service to society at large is practically the measure of our receipts from the world—especially in business.

This Is The Pump

WHEN looking at the usual Water System you have been used to seeing a great big tank with a complication of wheels, and gears, and belts and springs close by.

When looking at the Westco Water System, you can look for them, but as they do not exist, you cannot find them.

The

Westco

Tankless Water System

is so efficient because its construction is so simple and its action is so direct.

The **only moving part** is the impeller. This revolves free in the water channel, and therefore is practically wearproof.

The Westco Tankless Water System is one of the best, most profitable lines ever handled by a dealer.

The new systems going on the market are fitted with an

*All - Bronze Pump and
New Westco Two - Pole Pressure Switch*

Write us for particulars as to our Dealer Co-operative Plan, etc.

MANCHESTER, BIRMINGHAM.

Allpriser Service consists of a flexible, leather bound book 7 x 9, of 150 loose-leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest change.

It Pays for Itself

With the actual cash Allpriser saves the plumber it will pay for itself in a very short time. Allpriser is a preventive for losing money through mistakes in pricing. It gives the latest changes in buying and selling prices, eliminates errors, saves time and worry. The plumber can't do without it what he can do with it—namely, keep his profits intact. Write to-day for interesting literature and sample sheets.

No Complaints

Fig. 106
JENKINS
BRASS GLOBE VALVE
Suitable for 175 lbs. working steam
pressure or 250 lbs. working water pressure.

The Jenkins Diamond Mark is the symbol of valve service—that unerring service which is an assurance against complaints and “come backs.”

Superior construction is the secret of Jenkins dependability. A much heavier and stronger metal is used and the weight is so carefully distributed as to leave no weakness at any point.

With a record of satisfaction in every service since 1864 it is but natural that several imitations of the genuine Jenkins should appear on the market. As “complaint free” Service goes only with the **genuine** it is good policy to always ask for Jenkins by name and to look for the Diamond Trade Mark on the body of the valve.

At supply houses everywhere—in types and sizes to meet every valve requirement.

TWO FACTORS determine the value of a paper's circulation to the advertiser—quality and quantity.

The quality may be judged by the methods of obtaining subscriptions.

The quantity may be known absolutely by an independent and expert audit of the circulation records.

Both points are covered by the reports of the Audit Bureau of Circulations.

The advertiser who buys space on a business basis asks for an A.B.C. statement and studies it.

If an advertiser who does not demand an A.B.C. statement conducted the other branches of his business on the same method, he soon would not have any business to conduct.

An advertiser is entitled to the facts. An A.B.C. paper has nothing to hide.

Sanitary Engineer is the only Plumbing, Heating and Tinsmith publication in Canada that has submitted its circulation to the Audit Bureau of Circulations for an A.B.C. Audit.

PLUMBING FIXTURES

To-day's Higher Standards of Living Mean More Business For Plumbers

Bathrooms are no longer hidden under the back stairs. They consider the bathroom the most important room in the house and are willing to spend more money on it.

Modern taste and cultivation demand, not only sanitary and hygienic efficiency in plumbing fixtures, but beauty and luxury as well.

The extent to which you interpret to-day's desire of the consumer with carefully planned displays counts much in your volume of business.

People to-day want the sanitary cleanliness, also the comfort and convenience of modern fixtures. Show them and the natural desire of better living will do the rest.

Unwarranted Abuse of Tinsmiths

Inland Revenue Inspectors Threaten Tinsmiths Who Do Not Take Out Manufacturers' License and Make Returns of Sales Tax—High Official of Department at Ottawa Says Tinsmiths Not Liable as Manufacturers Pending Test Case—Some Technical Points Explained

Ottawa, April 21—"Where tinsmiths are selling to consumers they are not asked to collect and pay to the Government the manufacturers' tax until the test case against Ottawa tailoring firm is decided. If the finding of the case is that merchant tailors are not manufacturers, then same will apply to tinsmiths."—Department of Inland Revenue, Ottawa.

THE point brought out in the above official message from a high official of the Department of Inland Revenue at Ottawa, in answer to an enquiry by Sanitary Engineer, confirms the previous statements made by this paper as to the status of tinsmiths and is ample justification for tinsmiths who are being informed otherwise by local Inland Revenue inspectors to take issue with them on this question.

During the past week Sanitary Engineer has received a number of enquiries concerning this matter. While it was definitely stated in previous issues that tinsmiths were not liable to the manufacturers' license and to collect 2 per cent. sales tax on sales to consumers of lines "manufactured," the recent enquiries have come as result of the fact that Inland Revenue inspectors are telling the trade that the test case at Ottawa against merchant tailors has nothing to do with tinsmiths and that the latter are responsible as manufacturers.

Some indication of the attitude being taken by inspectors is gleaned from the following verbatim report of a conversation between an inspector of the Inland Revenue Department and an Eastern Ontario tinsmith during the week. That the officer was exceedingly overbearing, is evident from the following conversation :

I. R. O.—Mr. —, is it?

Merchant—Yes.

I. R. O.—I am from the Inland Revenue Department. I want to see your books.

Merchant—What books do you wish to see?

I. R. O.—I want to see all your books. I have the authority and I am going to see them!

Merchant—That's all right, but in what connection?

I. R. O.—In connection with your tinshop.

Merchant produces book where workmen have entered charges. These have been crossed out as entered on the firm's books.

I. R. O.—You had no right to cross these out in this manner.

Merchant—We have done this ever since we have been in business.

I. R. O.—You had no right to. I can't read them.

Merchant—The workmen didn't write them for you to read.

I. R. O.—Now I will take possession of your office.

Merchant—I will read these charges if it will be of any assistance.

I. R. O.—All right. Produce the ledger in which it is entered.

After some minutes' hunting the item is found and is copied on a paper. The next three items are for cleaning stoves, etc.

I. R. O.—It would take me a week at this rate to get the figures.

I. R. O.—What is your license number.

Merchant—Haven't such a thing.

I. R. O.—You should have. This tax should have been paid since May 19. Our men have been here four or five times trying to get you to make returns.

Merchant—There has never been an officer enter the door or a single letter from the department.

I. R. O.—Any way, you knew you had to pay this.

Merchant—We understood it hinged on the test case to be tried.

I. R. O.—This has no connection with you. It is very funny every other tinsmith has made returns.

Merchant—It is too bad we are the only exception in Canada, as we generally plan to pay what we should.

I. R. O.—I will be back in a few days' time and if returns are not ready, the law will take its course.

EXIT.

Tax on Purchases

An enquiry from another tinsmith states that he has received notice that his license fee (manufacturers' license) was again due. "I understand that the only difference it would make to me by taking out this license is that I will only have to pay 1 per cent. sales tax on goods purchased by me in place of 2 per

(Continued on page 16)

Arguments for Sanitary Installations

No Need to Wait For New Building Operations—Many Plumbing Renewals Required in Existing Buildings to Maintain Sanitary Conditions—True Value of Sanitary Appliances to the Public Health

By Thomas Darlington, M.D., ex-Commissioner of Health of New York.

I AM not interested in the matter of what manufacturers and jobbers of plumbing fixtures sell. I look at things from an entirely different standpoint. At the same time I am perfectly willing to give some suggestions along that line. I see no necessity, from my standpoint, of waiting for new building operations. You can sell all you have made, and more, too, if you only go at it in the right way.

How can I help you? Everything that you people make has to do with health. I put health above everything else.

Preventive medicine is the great thing of to-day. Suppose the wage-earner of a family dies, what happens to his children? The boy has to leave school at fourteen, while the girl has very little chance.

Health is our first consideration. What is it we want most of all? Production. What does this depend on? Health. I wonder if I can show it to you.

In this country, how many privies are there? How many places in industry have dirty waterclosets? How many have a first-class flushing system? We are frequently told there is no use putting in a good installation. Where a first-class installation has gone in, I have never seen a dirty seat. The great trouble is few put in the right installation. Frequently the seats are entirely too small, measuring nine inches across. If you want to put in a seat that is right, it must be fourteen inches and made in oval form.

Can you not sell toilet seats in the places that have not got them to-day by means of the foregoing example? I am not interested in how much money you make out of it. I am interested in having the people in this country in a better mood by having proper facilities and having their minds in a better condition.

Need of Fresh Water

Let us take this same mill that I spoke of. I noticed during the day that there were three hundred men who carried pails of drinking water into the mill. Then the water got warm in the mill and some men put ice in it. They bought the ice themselves and put it in the water. This, in some instances, produced cramps, and frequently a man blames it on his wife for something she gave him for breakfast in the morn-

ing. This is the customary and easy thing to do.

We figured it up and found the expense was \$22,500 a year for these men. We then figured putting in a great big tank of filtered water, and then cooling it with refrigerating pipes, fixing the temperature at 48 degrees, circulating through pipe through the mills at about 52. At every 25 feet was placed a sanitary drinking fountain. The fixed charges were lessened \$20,000 a year.

Can you not pipe every mill in this country if you can show that you can save \$20,000 a year? Think of a plant a mile and a half long with quadruple rows of fountains every 25 feet. It is a pretty good job.

What benefits resulted from these drinking fountains? All cramps disappeared. But what else? What is the value of drinking water to the system? What good is it to the drinkers? You can live thirty to forty days without food, but you can only go five days without water. Why? Because you need it for the blood, and you need it for the kidneys to get rid of the waste. With every breath you breathe out water from your lungs. You see it on a cold day. But on a hot day in summer you breathe out much more, and very much more in Arizona than in Florida.

What good is water to a system? In the first place, the body is made up of water; that is, two-thirds of it is water. Even the teeth contain water. What do we need it for? Excretion and secretion—excretion to get rid of these products, and secretion—well, we have a little important gland in the brain; we have another important gland in the neck, called the thyroid; a couple of glands in the back at the top of the kidneys known as the adrenals, and many others.

These glands regulate our body and the regulation of the body depends much on two things—the amount of fluid in the body and the condition of your brain, whether you think right or not. If you are angry, the adrenals work too fast and that stops secretion of the gastric juice and various other secretions in the body, but a great deal depends on the pressure of water and pressure of fluid. Fluid lessens friction in the body. We drink water also to dissolve the food.

Wash Basins

Let us next consider the value of wash

basins. How important is it to wash your hands?

Look in all these great industrial concerns throughout this country and see the men who take food out of a lunch basket that has been put up at home and eat it without washing their hands. Perhaps they have just been to the toilet or have had their hands in some dirty or filthy place. Do you wonder they are sometimes ill?

I was in Hog Island as consulting surgeon. We were looking for causes of disease. We looked in the kitchen where a lot of men had their hands in the dishwater. Examining the dishwater we found many kinds of bacteria in it. Where did they come from? Their hands were dirty when they put them in the water and the germs came off. These men had never learned to wash their hands.

Shower Baths

That brings me to another topic, that is the question of shower baths. What do shower baths mean? Simply to keep clean? No; nothing of the kind. I spoke of energy and getting tired. Some people who work very hard do such, as men who work down in mines. If, when they finish their work, they could have a shower, they would be very quickly relieved of much of this distressing fatigue.

If you can strip off and get under a warm shower, use soap and get off all the dirt, and then gradually turn off the warm water until the water chills you, all the fatigue poison will be driven in, and then as you turn the warm water on again it again brings the blood to the surface. This dilutes the pores and sends the poisons again out of the kidneys and out of the body, so much so that no matter how tired a person is at 5 o'clock in the afternoon, if they take a shower of this kind and change their clothes, the fatigue of the day has gone. They are then ready to eat their food when they get home.

In all these things we need these sanitary appliances of yours to fight misery, to fight sickness, to fight disease. I have unlimited hope and an abiding faith in the future.

Plans are being prepared at Highgate, Ont., for a memorial hall to cost \$9,000. Prices wanted on heating and electrical work.

Some Plumbing Display Suggestions

Goods Well Displayed Are Half Sold—Window Displays Can be Used by Progressive Plumbing and Heating Operators to Good Advantage—Some Valuable Suggestions on This Subject by the National Trade Extension Bureau

ACCORDING to the best definition, that is supported by the experience of merchants of every sort, merchandising (selling) is the process of creating and supplying of demand. In the plumbing and heating industry, demand, naturally, refers to the demand for plumbing and heating equipment. Good merchandising, of course, means that these operations will be conducted at a profit.

Three elements enter into the activities of merchandising—buying, displaying, selling.

The function of buying is, of course, of serious importance, but the concern of this particular article is with the displaying and selling of goods. We take it for granted that the usual plumbing and heating contractor is capable of buying wisely and well.

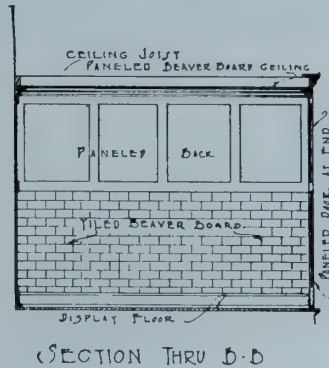

The proper display of merchandise is highly important with reference to successful selling. It is in the performance of this particular requirement that many plumbing and heating contractors are exceptionally weak.

Locating the Store

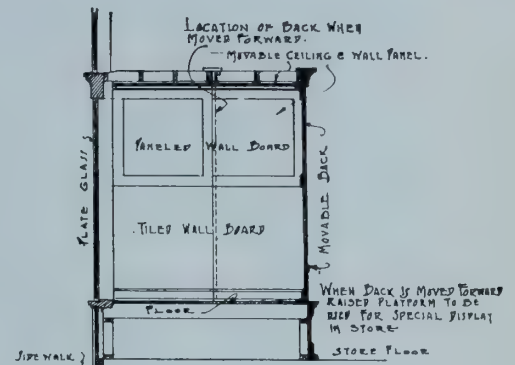

The best means of display available to the plumbing and heating contractor is his show window. It is obvious that the value of the show window is established by the location of the store, with reference to the number of people who pass it daily.

Big chain stores and department stores are seldom located and opened until after a very thorough study is made of the business section of the town. Actual records are taken of the number of people who pass every acceptable location, before a store site is definitely decided. Only the best points are selected, even if this compels a delay of several months before the desired location can be obtained. As this class of establishments is recognized as being operated by the keenest minds in the merchandising field, their methods offer suggestions to the plumbing and heating contractor that are worthy of serious attention.

A plumbing and heating contractor's store should be on a main street, and not on a side street or alley entirely away from the main flow of traffic. In other words, the location of the store ought to be the best possible that can be secured, with due regard to the amount of owner's capital and possible volume of business that can be handled on that capital. The location of your store should be the best possible that you can secure for the price allowed for rent.

(SECTION THRU B-B)

SECTION A-A

Take a count of the people that pass your present store in one day and compare it with the count of those passing a good location in the business section of your town, and you may find that you should move to a better location. As a matter of fact, this very thing has been done by plumbing and heating contractors in numbers of cases, and invariably on increase of business has resulted that has more than paid for the increased expense for rent.

The Show Window

Now let us consider the window. Of course, the window must be constructed right if the best results are to be obtained. An opaque back should always be provided to extend at least above the level of the eye. If at all possible the back should meet the window top. Unless the store ceiling is exceptionally low, a space should be allowed between the ceiling and the window top for light, and possibly for ventilation of the front part of the store. This space, above the show window top, is an excellent place to paint the dealer's name. With the window back extending to the ceiling, the store front is dark and depressing and has a bad effect on the entering customer. A way to remedy this defect, if the back must extend to the ceiling, is to put frosted or chipped glass at the top of the window-back, thus letting light enter the store through the window. If clear glass is used, care must be taken that such glass does not extend so far down that observers of the window can see enough of the store interior to distract their attention from the window trim. The closing-in of the windows need not be costly, as wall board can be used in panel design with good effect and at moderate cost. (See Fig. 2.)

With an open-back window, unless

back of the window is closed, it is impossible to get the observer's attention centred on the display. Attention is bound to be diverted to the store, particularly if persons are seen moving about. These bad features are multiplied at night when the window is lit up. The observer then gets a mixed-up view of window and store, and no impression that would stimulate buying is readily possible.

The color of the window finish must receive consideration, as colored surfaces play an important part in all window displays. A dark background must be avoided; otherwise the plate glass will serve as a mirror, and your window, instead of influencing women to come inside and purchase, will cause disinterested ladies to use it as a looking-glass to powder their noses. Also dark background on sunny days cause the glass to reflect everything that passes the window and, consequently, make it difficult to see the display.

In northern climates, care should be taken to have the window glass free from frost during freezing weather. This can be done by proper ventilation, which will keep the air temperature in the window the same as the outside temperature; if the heat from your heating plant is dry enough, there will be no moisture in the air to condense and freeze on the window. If the foregoing conditions cannot be met, an electric fan can be placed in the window pointed toward the glass. The moisture condensing on the glass will be evaporated by the breeze quickly enough to prevent the forming of frost.

Another remedy is to clean the glass thoroughly and then rub the inside surface with a chamois or soft cloth dipped in a solution of one ounce of glycerine in a pint of alcohol (denatured alcohol will answer the purpose). A little amber oil can be added to improve the

odor; the solution should stand till it clears. This treatment is inexpensive and not at all difficult.

Lighting the Show Window

All show windows should have the best illumination—both as to intensity and arrangement.

In a properly lighted show window there is sufficient illumination but no glare. An attractive display is largely discounted by poor illumination, whereas its value is greatly enhanced by proper illumination. As show windows occupy an appreciable part of the store area, it is inconsistent not to make window-space pay full returns on the investment represented by their frontage and area. Windows work at highest efficiency only when they show the goods to the best advantage, both during the evening and in daytime.

The evil of insufficient lighting is obvious, as nothing detracts so much from the appearance of a store as a dimly lighted window. Goods worthy of placing in the window are worthy of proper lighting; if they are not easily seen, the value of the window as an advertising medium is lost. On the other hand, the use of an unnecessary number of exposed high intensity lamps which dazzle the eye will turn the onlooker away because of this excessive brilliance. An exposed high-power lamp, hanging low in a shallow reflector, wastes half of its light on the sidewalk instead of being concentrated on the display where it belongs. The blinding glare from such illumination repels rather than attracts prospects.

A valance, either of cloth or painted on the glass, can be used to conceal the reflector. This kind of illumination directs the light on the goods and the benefit of all the light is received; no current is wasted in lighting the sidewalk and the observers.

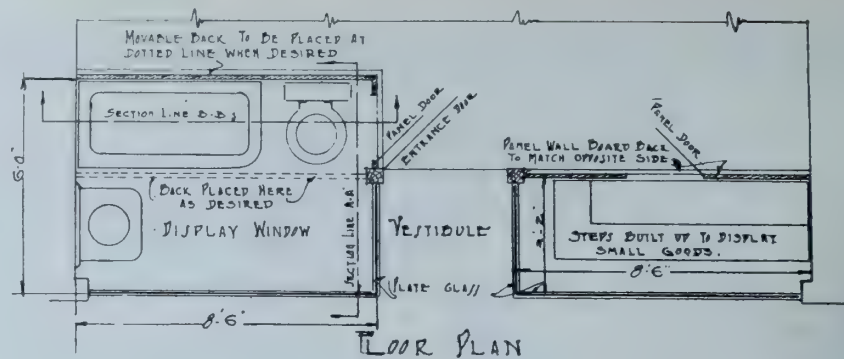

Color Important

Both the color of the window finish and the goods displayed must be considered in determining the intensity of the illumination. Disregard of these features has caused many a display to appear dull and uninteresting in tone. It is best to have the window lights arranged so that some can be turned off or on, as results indicate.

The following table shows the percentage of light reflected by different colored surfaces and will assist in determining how much light to use in window displays:

Dark blue	6½%
Dark green	10%
Pale red	16%
Dark yellow	20%
Pale blue	30%
Pale green	46½%
Pale yellow	40%
Pale orange	55%
White	70%

It costs more to light a window finished in dark wood, such as mahogany, than

one finished in light oak. This is also true of draperies, and the color of the goods displayed.

In displaying white and polished wares care should be taken not to have too much light, as the high intensity brings out the reflections on the surfaces too forcefully; this is confusing to the eye of the observer. Study each arrangement and adjust the light till you get a beautiful soft tone on the entire display.

Do not neglect to keep the windows illuminated during the evening. Hundreds, who in the hustle and bustle of business have little time during the day, will stop at an attractive window in the evening hours and often see something which prompts a profitable visit to the store the next day. Use a time switch to cut off the lights, but don't darken your windows during the earlier evening hours.

Trimming the Window

The next step toward better merchandising is the actual trimming of the windows.

Your show window is the "face" of your business. Some windows are like tramps, neglected, ragged, grimy, and generally repulsive; others fairly sparkle with enthusiasm, intelligence and cheerfulness, radiating character and personality in every detail, attracting irresistibly, as does an electro-magnet, drawing the prospect to the sales counter.

Many dealers do not realize the value of their show windows. A department store values its windows at from \$35 to \$50 a day. A successful Chicago merchant moved his store and paid \$15,000 additional rent per year for the same amount of store space. The same number of people now pass his store as before, but now he has six show windows instead of his former two. Each additional window proved to be worth almost \$4,000 a year.

Window trimming is an art; but a little knowledge of the underlying fundamentals and a little practice will enable any plumbing and heating contractor to have windows that will sell goods—and a well-trimmed window will pay the rent.

In preparing window displays a great many lose sight of the fact that a window is to sell goods. If windows are not performing this function, if they

show only a pretty arrangement of merchandise, they are not serving their purpose.

To gain the attention of a passer-by, the window must be attractive and interesting, it must make a forceful appeal to some class or group of prospective buyers.

A good window display creates desire for your goods at the most opportune moments—ten chances to one the prospect seeing it is already out to buy.

UNWARRANTED ABUSE OF TINSMITHS

(Continued from page 13)

cent. if I do not take out a license. Is it compulsory to take out a license? Also is it compulsory for me to collect two per cent. sales tax on goods I manufacture when I have already paid a tax to the wholesaler on the materials used in these goods? I have one shop at — and a branch in another town. Is it necessary for me to take out two licenses?

The first part of this inquiry brings up the question of the liability of the tinsmith for sales tax in connection with purchases. If the tinsmith is to be classed as a retailer rather than a manufacturer (and retailer is the category in which he is being classed pending the outcome of the test case), he has to pay a one per cent. tax on materials purchased direct from a wholesaler or two per cent. on purchases of materials direct from a manufacturer. In selling the product of this material he, as a retailer, would not collect any sales tax from the consumer. If the manufacturer's license is taken out by the tinsmith, it is true that he will only have to pay one per cent. on purchases of materials, but as a manufacturer he will have to collect a two per cent. tax on sales of the product of that material and make periodic return for that amount to the Government. Obviously, when the Government agrees to postpone classing tinsmiths as retailers pending the test case, the tinsmith will have less difficulty by classing himself as a retailer than as a manufacturer. Only one license is needed for the business, irrespective of the branches, providing such license is found to be necessary.

Patterns for a Sloping Inclined Hopper

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri.

HERE is the layout of a plan for a sloping inclined hopper.

The first step is to draw the plan, setting the square axis lines and describing the circle to suit the size of cylinder, or 64 inches in diameter in this case. Next, set the rectangle base A-B-C-D to the position measurements direct.

After this treat the circle in equal spaces, and draw lines to the corner of rectangle as shown.

Then erect the elevation, making the line 1-C on a 45-degree angle to 1-H, and fill in the slant line 1-7 to whatever slope your measurements direct.

This is the only slant line we need, and is used to obtain the various alti-

tudinal points in connection with the true lengths.

So from each point in circle of plan erect a line into slope line 1-7 of elevation as 2-3-4-5-6. Then from each of these points square over horizontal lines past the vertical line H-1, which is the set line for the diagram of true lengths.

Continued on page 29

Importance of Rural Water Systems

More Efficiency on Farms is Big Argument for Installation of Water Supply Systems—How Some Farmers Are Taking Advantage of Such Systems—Suggestions For Window Displays to Help Sell These Systems

THERE are perhaps more and stronger arguments to-day for the introduction of water supply systems in the rural districts of Canada than at any time in the past. The sanitary engineer may answer, "But my farmer prospects have not as much money to spend on such conveniences to-day as during the recent boom years." True this may be the case, but it is doubtful if a good sized bank roll is as instrumental in encouraging the farmer to spend money on a water supply system as a good sound argument, such as is advanced by present conditions.

In every branch of industry business relations are taking on a new aspect. The prosperous years preceding 1920 enabled many persons to ease up and the result was a loss of efficiency. To-day this inefficiency must be eliminated and advantage taken of every opportunity for economy of effort. This fact must be brought home to the farmer, and while many agencies are at work to do this the sanitary engineer may well lend his effort to the cause.

Figure Your Prospects

It should not be a difficult matter for the plumber to visit his farmer prospects and have it figured out definitely how much greater efficiency the farmer can have by the use of a water system. In between seeding and harvest is the best time in the summer to approach the farmer along such lines, and there is good time now to figure it out with special regard for the particular cases which must be dealt with. One important thing to keep in mind is the fact that installations of water systems themselves provide the best advertisement for the principle and the cumulative effect of introducing water systems into each locality will, in a few years, be very great.

All sorts of means have been applied in putting water under pressure in such systems, and a review of some of these older installations indicates that the idea is by no means new. True, there has been a remarkable development in the systems in recent years and these improvements combined with an old-established principle should provide sound argument for their use by farmers.

There are a number of installations in Ontario where the farmer has put the system in good use. These may provide the plumber with some ideas to advance when discussing the matter with his prospects.

Develops Water Power, Too

One Ontario farmer adopted a system of drawing water from a small stream passing in front of his house. Water was forced into the house and the barn.

By diverting part of the stream and securing a head of 12 feet, water power was developed from a turbine wheel providing power sufficient to crush grain, run a cutting-box, emery wheel, cream separator, etc.

Another farmer who secured his water by gravitation has put it under pressure in houses and outbuildings and all sanitary conveniences are provided. In this case the water supplied to the barn, drawn through a small pipe, furnishes sufficient power to run a saw for cutting wood, a cutting-box, a carrier that is used in elevating sheaves at harvest, a grain-crusher, pulper, fanning mill, etc. The pipe supplying the house, beside serving for domestic purposes, provides power for operating a washing machine, churn, etc., and even furnishing energy for a small electric lighting plant to illuminate the house. Fifteen lights of 20 candle-power can be used at one time.

Combination Pump

Still another farmer sank a well for hard water 25 feet deep about 30 feet from the house and constructed a cistern at one corner of the house. A combination pump was set up inside the house to draw water both from well and cistern. Valves in the pipe make it possible to shut off the soft water when hard water is pumped. There is a tank in the attic and once a week this is filled with soft water by pumping and the water then flows downward as required to bath tub and wash bowl. The hot water tank is located in the bathroom and keeps this room warm even in zero weather. By using soft water there is

no danger of the heater in the stove front becoming crusted with lime. The hard water is used only for drinking and cooking. The town water supply is drawn on for flushing the closet.

Using the Windows

There are any number of ideas to be worked out to increase the convenience of the rural home by the installation of a water supply system. Each plumber can figure these out for his own community and make a drive for such business. In connection with such selling effort the store windows should be used. A window illustration can be prepared by the use of illustrated matter supplied by manufacturers. Catalogues and other booklets will provide illustrations of plumbing fixtures and water systems and these can be pasted on a board. This illustration might show a range in the kitchen, water system pumps, etc., shown in the basement. A water trough with toy animals can also be shown. A light platform might be erected showing the basement of the house between the floor of the window and the platform, the upper floors of the house being above the platform. With a little paint and brush work a pipe line can be shown from the cistern to the water system in the basement and the sewage line from the house to the sewage disposal tank.

Under the heading, "Running Water on the Farm," a number of faucets might be shown at the top of the display with a ribbon drawn to the various water outlets in the house or barn. In the window might be shown a farm water system and other accessories.

An Apprentice to Three Journeymen

Plan Favored by Master Plumbers For the United States—Recommendation to be Made to General Convention

ONE apprentice to every three journeymen in the trade in the United States. This is the proportion favored by the Tennessee Association of Sanitary Engineers at its annual convention in Knoxville and which will be recommended to the national convention to be held in New Orleans in June.

It was proposed by Frank Herbrick, of Nashville, former president of the state association, who announced that at a meeting of master and journeymen plumbers at Indianapolis there had been a proposition for one apprentice to every five journeymen. Later he said there had been a proposal of one apprentice to each three journeymen, the matter be-

ing referred to the national organization, but no action taken. "Apprentices can be sent out to trivial jobs and do them as well as journeymen," he declared.

Mr. Herbrick asked those present to hold up their hands if any of them had apprentices now in their employ. No hands were held up. One delegate said he had three apprentices in his establishment when he left home, but that he did not expect to have them when he returned.

Delegates also went on record unanimously as favoring the "open shop" or American plan of employment. The national association had favored the plan and W. V. Kennedy, of Nashville, the retiring president, urged it.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights
—Keep the Entire Series Where It May be Referred to and Studied

Article No. 30 of the Series—Illustration No. 37-40

(Continued from March 1 issue)

FIG. 40 shows a plan and section of a small screening chamber which will meet the requirements for small installations. The chief point to be borne in mind is not to decrease the velocity so that the solid matters in

the filtration area for final purification. This chamber can be connected by a pipe and valve connection to the by-pass but if the tank is well connected there is no necessity for this chamber connection.

channel irons built in the concrete wall. It is a good practice to connect the outlet end of the sedimentation tank with

suspension will be deposited, turning same into a miniature settling tank. Only the heavy indestructible mineral matter should be retained in this chamber and the screens should be always kept clear so as to not interfere with the flow.

The illustration shows a small chamber, 10 feet by 2 feet 9 inches, constructed in concrete below the ground level with a catchpit and cast iron screen set at an angle of 45 degrees with $\frac{3}{4}$ -inch bar spacing. The tank is covered with a movable stone slab for cleaning purposes or can be constructed in concrete with an inspection manhole as required. A valve should be placed on the outgoing pipe to tank so that the works can be closed down and sewage diverted by means of by-pass having its outlet behind the screen, as shown in the drawings.

The outlet overflow empties into a small dosing chamber connected for economical reasons direct to the Imhoff tank. An automatic syphon is installed in this chamber, which discharges the clarified tank effluent periodically on to

Fig. 38

The concrete forms should all be matched and dressed lumber and the finished surface should be left smooth and watertight. For safety purposes, owing to the depth of the tank, same should be enclosed by means of a cheap railing constructed with $1\frac{1}{4}$ -inch gas pipe tubing. Wooden baffle boards should be placed at the inlet and outlet of the sedimentation tank, let into 3-inch

Fig. 39.

the by-pass by means of a pipe and valve connection so that at any time the clarified tank effluent can be passed direct into the stream should the filtration area be out of commission.

The writer believes in making this connection wherever possible on the vertical sludge pipe at the quarter bend by continuing the horizontal pipe through the sludge apron. By this means you not only provide an outlet, but it enables you to flush the sludge pipe after each discharge.

Fig. 40.

Heating and Ventilating

Combination Heating Systems

Written for Sanitary Engineer by N. A. KEARNS

(Continued from last issue)

In all cases, the radiation in the rooms which are some distance from the furnace should be figured for the full heat loss. The radiators which are set fairly close to the furnace may be reduced in area in proportion to the effective areas of the warm-air pipes serving heat to such rooms. In making the reduction, it is well to consider that one square inch of effective leader area is equivalent in heating effect to about one square foot of direct hot-water radiating surface.

The efficiency of direct hot-water radiators, of the cast iron type, may be considered as being 155 B.T.U. per square foot per hour.

The feed pipe connection to a radiator may be made at the top or bottom; but in all cases the return connection must be fitted to the bottom of the radiator.

When a supply connection is made to the top of the radiator, the circulation in that radiator will be downward in every loop or section. When the feed connection is made at the bottom of the radiator, the circulation will be upwards in the first loop and downward in all of the others, or an upward and downward circulation may take place in the same loop or section.

Hot Water Circulation.

The force which causes the hot water in a gravity system to flow comes from the difference in pressure between the water contained within the flow and return circuits. The water in the return pipes, being colder and heavier than the water contained within the feed pipes, exerts a continual pressure against the base of the column of warmer water. It is the effort of nature to equalize the pressure in the two columns which causes the water to circulate.

This motive force, especially in an open tank system, is not very great, so the careful fitter always arranges the piping, etc., so that they will offer the least possible obstruction to the free circulation of water.

Combination heating plants are usually piped for the "open tank" or "low pressure" system. In a system of this kind the water temperature never exceeds 212 degrees.

In designing a hot-water system of gravity circulation, the object of the engineer is to equalize the resistance in every branch, so that the water will flow at an equal rate through all parts of the apparatus. The equalization is accomplished by making the diameter of each pipe proportionate to the driving force at each particular point. If a pipe connecting a radiator which lies close to the boiler should by mistake be made too large, it is likely that the circulation of water through that radiator might be rapid enough to check the return of water from a radiator set in some less favored position.

The system of piping favored for small installation is that known as the "two-pipe" or "parallel system." In this system the main supply pipes are connected to the feed headerappings of the combination boiler. The mains run close to the basement ceiling and are pitched upwards toward the radiators. Branches to radiators are taken out of the top, side, or bottom of the main feed, as the circumstances of the design may warrant. The return mains are run parallel with the feed mains, the branches from radiator returns being connected in the same manner as for the feeds. The return main drops down to, and is connected with the return headerappings of the combination boiler.

In installing this, or, in fact, any system of piping, care must be taken to see that no pockets are formed where air may gather and obstruct the circulation of water. Where air is likely to accumulate the apparatus must be vented.

When a horizontal main is reduced in size, the fitting taken off it must be out of the top. A fitting set thus will allow the escape of air which might otherwise prevent circulation farther on in the main.

When it is necessary to reduce a main after a fitting has been taken off from the bottom, the reduction should be made by means of an eccentric coupling turned so that there will be no downward break in the uniform upward grade of the main.

The Inverted Circuit

This system of piping is also known

by the name of the "equalized system."

In the equalized system the piping is so arranged that the water is compelled to travel the same distance in going to and in returning from any radiator on the same floor. In this way no radiator has any advantage over any other. The piping is installed so that the first radiator fed from the supply main is the radiator that is the last to have its water returned from the boiler.

Expansion Tanks.

The purpose of the expansion tanks is to provide a chamber in which the water may expand as it becomes heated.

In combination systems the open tank is generally used.

In open tank systems the expansion of water will take place without any change of pressure throughout the system.

The closed tank is not very often used in connection with combination systems. The sealed tank is not entirely safe, and when it must be used it should always be fitted with a reliable safety valve.

The size of the open tank required for a hot-water system may be estimated by allowing for a tank capacity of about 5 per cent. of the water contained in the entire apparatus.

Expansion tanks should be set where they will be in full view. They should be protected from frost, and set well above the highest point of the circulating system.

The pipe connecting the tank and heater must be free of any valves or checks which might cut off communication between the tank and boiler.

The surface of the water must be open to the atmosphere by way of a vent pipe. The overflow should be brought down through the building by means of a pipe, discharging where it may be easily seen.

(Continued in next issue)

NEW SANITARY SYSTEM

Newmarket.—At a meeting of the High School Board plans for a complete new sanitary system, submitted by O. E. Tench were approved. The new system, which is of the very latest design, will cost \$4,000.

THE QUESTION BOX

Plans for Public Comfort Station

Question.—We have been asked by a member of the Women's Council to procure some information regarding public comfort stations. We remember some time ago seeing articles in Sanitary Engineer on that subject. Evans & Chisholm, New Glasgow, N.S.

Answer.—Probably the best pointers on comfort stations can be gleaned from a review of the installations in a certain city. Winnipeg has gone fully into the matter and in the following report on the systems in that city you will find much valuable information:

There are several unique features about the comfort stations of Winnipeg. In the first place they are sweat proof, being a shell within a shell, the outer shell being of concrete and the inner shell of baked enamelled steel. You will also see by examining the plan that the pipe chambers behind the fixtures are very roomy, and the floor of the pipe chamber is about 18 inches lower than floor of lavatory, so that all the piping is exposed to view, even the drains. In this country where so much trouble is experienced with frost at soil pipe terminals, it would have been impossible to protect a stack running through a superstructure such as is shown here without grave danger of it becoming continually blocked with frost, so we did not run a stack at all but carried the 4-inch vent pipe through wall of comfort station and turned it into a manhole specially built alongside station. In this way there is no possibility of trouble from frost, and the manhole can be constantly kept under observation. The ventilation is very complete for buildings of this nature heated by electricity, although the buildings are so designed that they can also be heated by steam, gas or hot air if thought advisable.

These are the first comfort stations built in Winnipeg under the direct control of the city officials. They are plain, serviceable and permanent structures, and were designed to give the best and greatest accommodation at a minimum cost.

The accompanying table shows the accommodation and capital cost of stations constructed in recent years, also the cost per fixture. It will be seen that most recently constructed stations cost much less per fixture than those built in 1914-15 in spite of the fact that material had increased considerably in that time.

SPECIFICATIONS FOR PLUMBING AND VENTILATING OF COMFORT STATIONS

Plumbing

These specifications and drawings are intended to cover the installation of a complete system of plumbing, including plumbing fixtures and their fittings. The contractor shall guarantee to keep in repair all work done by him for one year except where damage is done through misuse or frost. All work must be executed in a proper manner, and to the satisfaction of the plumbing inspector of the city of Winnipeg, or his assistant,

galvanized W. I. piping as shown on plan, and main 4-inch vent to be extended with C. I. piping through wall of building into manhole at a point not more than 5 feet above the floor of the comfort station. All vents to be properly graded.

Floor drains in ladies' lavatory to be formed of 4-inch pipe with bends turned up and fitted with 8-inch frame and brass cover.

Rain Water Leaders

Construct two 2-inch rain water leaders of C.I. piping discharging into catch basin.

Location—	W.C.'s	Urinals	Basins	Drinking Fountains	Total	Grand Total	Capital Cost	Cost per Fixture
Fort St. (male), built 1914-15...	6	12	2	1	21			
Garry St. (female), built 1914-15.	7	..	2	1	10	31	\$25,777.35	\$812.17
Logan & Main (male)	6	8	2	1				
Logan & Main (female)	6	..	2	1				
Built 1916-17.								
Selkirk & Main (male)	6	8	2	1				
Selkirk & Main (female)	6	..	2	1	26	52	\$27,102.15	\$521.19
Built 1916-17.								

and in addition shall be carried out in accordance with the accompanying plans and specifications and the city by-laws governing such work. The contractor shall make allowance in his tender for all permit fees including sewer and plumbing permits.

Sewer Connections

Construct a 6-inch sewer connection from main sewer on street to a point 8 feet outside wall of building.

Drains

Construct and connect 4-inch C. I. drain from sewer connection into and throughout building as shown on plan, with all necessary connections, with clean-outs and floor drains where necessary and having a 4-inch hub valve on the drain immediately it passes into the building, said valve to be built into a waterproof valve chamber 2 feet in diameter constructed of concrete, the gate valve to have brass trimmings and wedge gate, valve spindle to be fitted with wheel and spindle extended so that wheel is not less than 3 inches below floor.

Vents

Vent pipes are to be constructed of

Construct 2-inch wastes with trap from drinking fountain to catch basin.

Water

Construct and lay a 4-inch C. I. water supply pipe from water main on street into building, and run two 2-inch branches to each lavatory taking off 1½-inch connections to each.

W.C. Each branch to be fitted with standard brass gate valve. Also run ½-inch connections to each urinal tank and hot and cold supplies to basins, said connections to be fitted with ½-inch compression cocks. All valves and stop cocks to be placed in pipe chamber behind fixtures, all exposed supply pipes and fittings to be heavy N.P. Brass Supply and fix 1 N.P. hose bib cock and extension, position to be located by the architect. Supply and fix 40-gallon hot water tank complete with W.I. stand and fittings in fan room. The tank is to be fitted with an electric water heater of the Westinghouse type.

Water Closets

Supply and fit up twelve water closets of the acme syphon jet centripetal action pattern (plate G. 1885) G. Jas. Robertson Co.'s catalog fitted with concealed

Kenny flushometers, pull-button pattern with recessed face plate, and oak seats heavily reinforced all round with N.P. brass flange with Crown bumpers inserted all around side of seat.

Water closet bowls to be connected with C.I. bends with heavy brass floor flanges caulked in.

Urinals

Supply and fit up complete eight (8) class "B" craftsman interlocking ideal porcelain urinals (plate 3583N). Trenton Potteries Co.'s catalogue with integral seam covers, twenty-four (24) inches wide and forty-eight (48) inches high, to be fitted with two eight-gallon vitreous china automatic flush tanks to be placed in pipe chamber and supplies brought through partitions. Each urinal to be trapped separately by a 3-inch C.I. trap in pipe chamber with full size clean-outs as shown on plan. Outlets from each urinal to be fitted with rose strainer.

Wash Basins

Supply and fit up two wash basins 24 inches by 21 inches complete as shown on plate 2563 N. Catalog Trenton Potteries Co., fitted with self closing cocks and supported by wall brackets and leg to floor.

Drinking Fountain

Supply and fit up two drinking fountains complete as shown in plate 6549 Standard Sanitary Catalog, fitted with push button head and loose key stop on supply fountain. Standard to be painted with three coats of white enamel paint.

Soap Dishes, Toilet Paper and Towel Holders

To be supplied and fixed to the entire satisfaction of the plumbing inspector or his assistant.

Ventilating System

The contractor is to instal a complete system of ventilation with motors, ducts, cut-out switch, meter brackets, etc. The fresh air supply fan will have a capacity for delivery of 1,150 cubic feet of air per minute, and the foul air fan 862 cubic feet of air per minute. Both fans will require not more than 45 h.p.

Fresh Air Supply

Fresh air supply is taken from intake flue of an area of 200 square inches and is connected to a flue where shown on plans, of an area of 144 square inches and discharged into male and female apartments through 10-inch by 16-inch registers; these registers are located in the ceiling.

Foul Air System

Foul air system consists mainly of 4-inch connections at each closet connecting to 6-inch by 6-inch registers located approximately 12 inches from the floor and connected to a duct with an area of 80 square inches.

Fan

Fan consists of two (2) multivane type exhaust fans, with wheels overhung

on extended shaft of Sturtevant type "B" direct current motor. Motor to be supported on steel plate box (or C.I.) attached to fan housing, making a rigid compact unit.

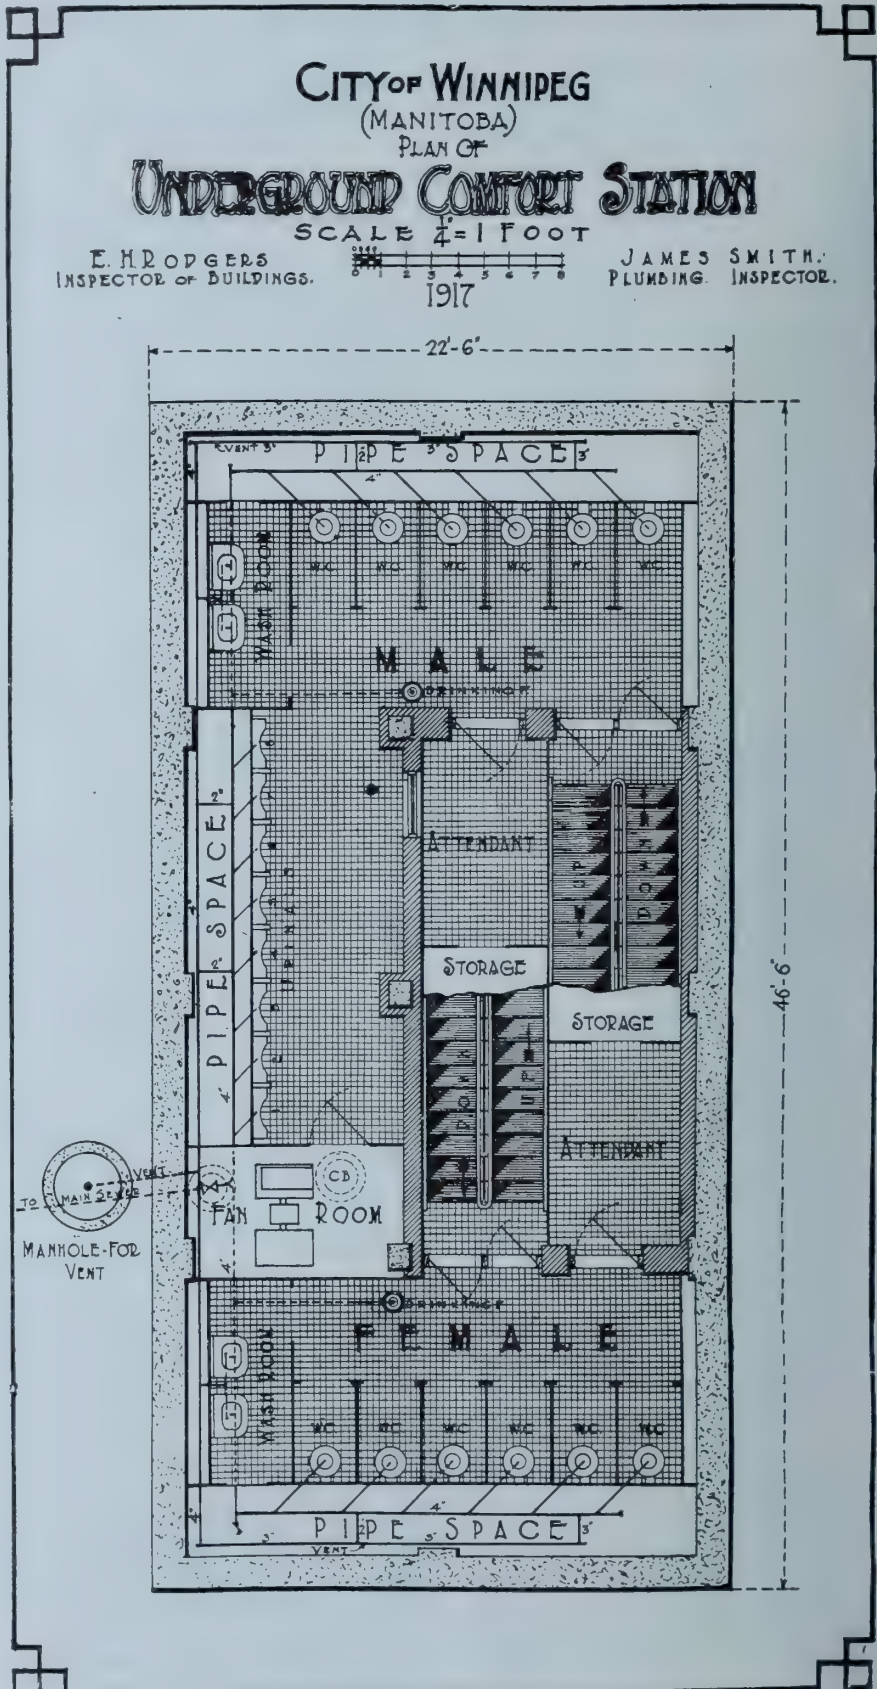

Ducts

Ducts to be made of 22 gauge iron (galv.) with lap and soldered joints and

where exposed in lavatory to be enamelled white with three coats of enamel.

Registers

Registers to be all nickel-plated with hit and miss closures. Intake and exhaust to have copper mesh 1 inch square and all to be constructed to detail.

Facts About Warm Air Installations

Faulty Installations Have Put Warm Air Furnaces in Bad Repute
—Some of the Chief Imperfections in Installation—Size of Registers Needed for Various Sizes of Furnace Pipes

"IT was not until about the 19th century that we find the present system of heat transmission through the agency of steam, water or air to come into general use. During the past fifty years the art of heat transmission has been raised to the dignity of a science," said a speaker before a recent convention of the Sheet Metal Contractors' Association of Illinois.

"Eminent heating engineers, such as Carpenter, Snow, Kidder, Fuller and others, have published technical books on the subject, which enable the scholar of to-day to master the science and produce economical results that were not thought of in past ages.

"Some of you may know of the research work now being done by Professor Willard and his staff of assistants at the University of Illinois. They are engaged in a scientific test of furnaces and all the appurtenances thereto.

"This work was made possible through the financial aid and co-operation of the National Warm Air Heating and Ventilating Association—an organization that has for its object improvements in furnace construction, installation, legislation and any of the things that make for betterment of the industry.

"I think many of you will agree with me when I say that much of the present installation of furnaces has been done without regard to the science that the work required, neither has the fire hazard been given the necessary consideration.

"Faulty installation of furnaces has put the art in such bad repute, that it is not uncommon to hear the public say that a warm air furnace is not a satisfactory method of heating a building, frequently proving their statements by referring to some of their acquaintances who are using a furnace with unsatisfactory results.

"The entire question of an imperfect warm air heating system is not a result of imperfect furnace design, because I do not believe there is a furnace made that will not do the work if properly installed. Unsatisfactory results are always traceable to imperfect casings, fittings or installation in general.

Proper Installation Eliminates Trouble

"Proper installation will entirely eliminate the complaint where one or more warm air pipes fail to deliver any warm air. This condition, when it occurs, causes the installer much trouble and expense to remedy.

"It means a number of trips back to the job, possibly installing a trap, to force heat into the obstinate pipe, or, in

some cases, removing the pipe and replacing with one of larger capacity, all of which often ends in failure, causing a dissatisfied customer or the removal of the entire apparatus.

"My own observations in checking over a great many installations leads me to the conclusion that most jobs were put in, based on guess work only. I could not find that any rule for estimating pipe or furnace sizes was used.

"I frequently find furnaces, warm air pipes and cold air supply undersized, in fact the entire installation so far out of balance that the only remedy would be a complete removal of all the work and a new furnace and fittings substituted.

"There are absolute fundamental laws governing the installation of furnaces, which if followed will avoid failure entirely. I realize that many of us engaged in furnace installation have not had an academic education, and, therefore, all the technical books published are of no value to us.

"It certainly is an accomplishment to be able to figure the pounds of air to be circulated per hour; furnace rating based on the rate of combustion expressed in British thermal heat units; the volume of air in ventilating shafts; mechanical fan blast system of heating; and other technical problems that confront the furnace installer.

Follow Law of Air Velocities

"Although we may not be able to use these factors, we can nevertheless do a scientific installation of furnaces, by following the law of air velocities, namely: dealing with the volume of air flow through the casing, which after all is the important factor on which we must found our work.

"We can afford to leave the question of radiation and convection of heat to the maker of the furnace. We also have a right to expect that the furnace is so designed that it will heat the air flow within the casing. Therefore, the installer can confine his problem to a proper distribution of the available heated air.

"It is essential that you should know the exact air supply in the casing. This can be ascertained by measuring the area of the casing and deducting from this area the obstruction of the furnace inside the casing. This will give you the free air available for distribution.

"I have seen jobs that had leader pipes whose combined area was far greater than the free air area within the casing, consequently some of the

pipes were 'starved,' since those of least friction would take all the heat, leaving others to act as cold air returns instead of warm air supply ducts.

"It is impossible to take out more air than the furnace supplies. If inlet, outlet and free air area in the casing are balanced, there can be no chance of all leader pipes not getting a full flow of air, and if of proper size will heat the room for which it is intended.

"As a general rule we find that in ordinary cellars we cannot get more elevation to the leader pipes than about one inch to a foot. This elevation gives us a velocity of 100 feet per minute, which is slow, and requires the use of large leader pipes. There are a number of rules based on this velocity that the furnace installer may use to compute the area of the leader pipes required. These rules are simple and do not require an education beyond the ability to add and multiply figures.

Building Capacity Figures Unreliable

"I find that many furnace installers work on the basis of cubic foot capacity of the building to be heated, and then accept the cubic foot heating capacity of the furnace as rated in manufacturers' catalogues.

"This is a very unreliable method, since exposed wall surface and glass surface are vital factors which must be taken into consideration. Moreover: the cubic foot rating of many furnaces is open to question. Some reliance might be placed on this rule if not more than 324 cubic feet of space is estimated for each square foot of radiating surface of the furnace.

"Again: The free air area in the casing is frequently found out of balance with the heater. In view of this condition, I would recommend that the furnace installer measure up the furnace he is selling and determine for himself the actual volume of air in the casing; then use up to 90 per cent. of this volume for distribution, leaving about 1-10th of the area for loss by friction. This will make you safe on any job.

"One of the most common errors made by the furnace installer is the use of registers of insufficient capacity. It seems to be customary to use the smallest register possible to serve as a warm air pipe.

"Frequently a 12x14 floor register will be found serving a 12-inch pipe. The pipeless furnaces being sold to farm homes. The sale in this direction has an area of 113 inches, showing a short-

Sanitary Engineer

Plumber and Steamfitter of Canada

CASE OF TINSMITHS

A GREAT deal of confusion has been caused in connection with the application of taxes to the product of tinsmith shops owing to the fact that the exact status of this trade has been indefinite. In a recent issue of *SANITARY ENGINEER* a statement was published from the Assistant Deputy Minister of Customs and Inland Revenue to the effect that pending the test case being instituted against a tailoring firm in Ottawa to establish whether a retailer could be classed as a manufacturer, tinsmiths and certain other trades would not be responsible for taking out manufacturers' licenses and collecting 2 per cent. sales tax from their customers. Despite this assurance a number of letters have been received from tinsmiths during the past week stating that Inland Revenue officers have been overbearing in their dealings with tinsmiths and pay no attention to the above ruling, stating that tinsmiths are not affected by what the tailors' case establishes.

In order to clear up misunderstanding and give tinsmiths something to work on, a definite statement from a high official of the Department of Inland Revenue appears in this issue confirming the previous statement. With this assurance these merchants can refrain from taking out or renewing manufacturers' licenses and from collecting any sales tax whatever on their sales. This must not be confused with the sales tax they pay on materials purchased from wholesalers or manufacturers. If a tinsmith classes himself as a retailer he pays 1 per cent. on materials bought from wholesalers and 2 per cent. on materials bought from manufacturers. He has no part in making returns for this tax, however. This statement should clear up any difficulty and the result of the test case will be made known in *SANITARY ENGINEER* in a short time. It is due for consideration early next month.

ADEQUATE PLUMBING AND DRAINAGE

THE close of the present century witnessed a most remarkable development in the construction of plumbing and house drainage. Heretofore, many earnest, well-meaning individuals, not appreciating the importance of correct plumbing and drainage, were inclined to sacrifice these vital factors in their buildings to the adornment of their reception, dining and other rooms, not realizing that the very decorative work on which so much time was spent might conceal a hidden enemy in the disguise of deadly sewer gas.

The presence of drain diseases, such as typhoid and scarlet fevers, dysentery, etc., coming frequently from no apparent cause, led the inquiring minds of the master plumbers to investigate, and as a result of their investigation is attributed much of the improvements now noticed in modern edifices, this same work which was heretofore done for the embellishment of the more fav-

ored portion of dwellings is now applied to bath and toilet rooms and their accompanying house drain accessories, and knowledge and refinement have superseded ignorance and neglect. While all these are laudable steps in the right direction, still it must be borne in mind that attractive fixtures may be attached to defective drains and a dangerous state of infection may exist among daintiest surroundings. House drains and their accessories convey from the house the liquids and solid refuse which animal life ejects. Waste is a necessary accompaniment in all conditions of life. The accumulated waste from daily existence of life which naturally becomes offensive must be removed or disease will ensue. The drains therefore which encircle the abode and other structures and convey the matter from dwellings must be absolutely perfect; even the slightest imperfections create a chronic state of ill health and oftentimes death. Therefore, every owner of property, architect and plumber should weigh these facts well. They should familiarize themselves with plumbing and drainage systems of the structure and adopt only that which is trustworthy in every respect.

PROBLEMS OF APPRENTICESHIP

IT is encouraging to note that master plumbers are addressing themselves seriously to the problem of apprenticeship. The shortage of apprentices in the plumbing trade will bring about a serious situation if it is not remedied in time. Few journeymen are coming from the Old Country and Canadian youths have shown a disinclination to become plumbers under existing conditions. If the heralded revival of building were to set in the country would soon be confronted by a labor shortage and construction would again be held up with injury to many industrial interests and to business generally.

While conditions are such as now prevail, there is little encouragement to go ahead with plans for drawing apprentices to the plumbing industry, but now is the time to make preparation for the more active period which is bound to come. In his report on the apprenticeship question to the recent convention of the Ontario Society, D.S. and H.E., George Clapperton drew attention to the splendid results obtained from the classes of instruction provided at the technical school in Toronto. This educational work should be extended. Frequently, enquiries have come to *SANITARY ENGINEER* from various parts of the country asking for the names of master plumbers who will take apprentices and who will make provision for their education. This condition indicates the necessity for an extension of educational training to the coming generation of plumbers.

In this connection it is interesting to note that the National Joint Conference Board of the building trades industry has outlined an apprenticeship plan to be submitted to employers' associations and trades unions. The details are technical and require close examination, but on the whole the object of the recommendations is commendable. Methods of recruiting the plumbing industry can be found if ideas are forthcoming from all branches and the result will be to place the trade on a sounder basis for future development.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Hamilton, Ont.—J. H. Stewart & Son, plumbers, have dissolved. C. J. Stewart continues.

DISCONTINUES BUSINESS

Annapolis Royal, N.S.—R. T. Harris, plumber, has discontinued business.

NEW FIRMS

Westmount, Quebec.—Wheatley & Capelin have commenced the plumbing and heating business at 239 Victoria Ave.

PERSONAL

F. M. Wilkes, sales manager of Cluff Bros., Ltd., Church St., Toronto, has been ill for the past two weeks and absent from his office.

OBITUARY

One of the "old school" in the plumbing and steamfitting trades has passed away in Montreal in the person of Richard Egan. Mr. Egan was 72 years of age and was connected with the plumbing and heating trade for 45 years, serving his time with John Date, plumbing contractors, who still carry on business in the city, and became foreman with the above concern at the age of 30 years.

Many head members of plumbing and steamfitting firms at present in Montreal started their trade with the deceased. Mr. Egan was a charter member of the Montreal Master Plumbers' Association.

Montreal.—David Hickey, Hickey & Aubut, plumbers, is dead.

ADDITION TO PLUMBING SUPPLIES WAREHOUSE

Sherbrooke, Que.—Construction has commenced on the new five storey building which is being erected for A. R. Wilson, plumbers' and steamfitters' supplies. Mr. Wilson will carry a very complete line and will devote two floors to show room accommodation.

CONVENTION OF CANADIAN SOCIETY, D. S. & H. E.

The annual convention of the Canadian Society, Domestic Sanitary and Heating Engineers, will be held in the city of Quebec on June 6, 7 and 8. The complete programme and other details regarding the convention will be outlined in Sanitary Engineer well in advance of the dates mentioned.

RIDICULES RESOLUTION OF MONTREAL PLUMBERS

Ottawa.—Tom Moore, president of the Trades and Labor Congress of Canada, ridiculed the resolution submitted by the Montreal plumbers against the exportation of coal to England during the present strike. He stated that the fact that the Montreal Trades and Labor Council took no action when the resolution was submitted was sufficient proof as to how it was generally considered. He added that the American Federation of Labor could not induce any labor organization to take any action, as the labor organizations had complete autonomy.

MASTER PLUMBERS IN NEW QUARTERS

Montreal.—The offices of the Master Plumbers' Association are being moved to temporary quarters, 10 Belmont Street, next week.

These temporary offices have been leased for one year, while the future quarters of the Builders' Exchange (Master Plumbers included) are being completed. In the new building the whole of one floor will be occupied by the Builders' Exchange for offices of the secretary, board of directors, committee rooms and general meeting rooms. About 3,000 square feet will be allocated against 900 square feet in their present location. The remainder of this floor will be taken up by reading rooms, billiard rooms, etc.

WATERWORKS SYSTEM FOR PORT CREDIT

Port Credit.—"That owing to the report of the Provincial Board of Health, relative to the condition in the water supply of Port Credit, be it resolved that our solicitor be instructed to prepare a by-law for \$55,000 to be submitted to the people for the supply works of a waterworks system. Also to prepare the necessary by-laws and notices for installing the distribution system under clause 13 of the Local Improvement Act."

With very little discussion the council passed this resolution, setting in motion the work of getting a waterworks system for the village. Engineer Proctor was instructed to prepare the necessary plans for the approval of the Provincial Board of Health.

WESTERN ONTARIO NOTES

Roy Wilson, Waterford, Ont., wants prices on heating in connection with new school to be erected at S. S. No. 6, Townsend Tp.

* * *

Plans are to be prepared for a new technical school to cost \$300,000 at Windsor, Ont. H. J. Neal, chairman of the Board of Education.

* * *

H. Garley, 164 Adelaide St., London, Ont., wants price on hot air heating, plumbing and electrical work for new \$5,000 dwelling.

* * *

H. Wolf, 491 King St., London, has commenced excavating for two new residences to cost \$12,000 and wants prices on hot air heating, plumbing and electrical work.

* * *

The Webster Construction Co., of London, Ont., has been awarded contract for laying new sanitary sewers in the town of Simcoe.

* * *

Henry Radcliffe, 272 Regent St., London, Ont., wants prices on hot water heating, plumbing and electrical work for new residence to cost \$9,000.

* * *

Arthur Brown, Essex, Ont., is preparing plans for new \$5,000 bungalow and wants prices on heating, plumbing and electrical equipment.

* * *

Wilfrid Glenn, 69 Wilton Court Hotel, Toronto, is preparing plans for two dwellings to be erected on property he owns in London and wants prices on hot air heating, plumbing and electrical equipment.

* * *

John Moran, 967 Maitland St., London, has commenced excavating for new dwelling to cost \$4,500 and wants prices on heating, plumbing and electrical work.

* * *

The Patterson Engineering and Construction Co., Windsor, Ont., E. F. Patterson, manager, is preparing plans for 100 bungalows and is interested in prices of heating, plumbing and electrical equipment in quantity.

* * *

D. M. McGregor, Aylmer, Ont., will receive tenders until May 14 for erection and equipment of new school lavatory to include eight urinals and eight toilets. Estimated cost, \$9,000.

Are You Helping t

A syphon does not start of itself, as you know; you must first prime it or otherwise furnish the mechanical aid to raise the liquid up the short leg to the turning point.

After that the fluid runs smoothly, evenly, and continuously, with little more required than watchful care to prevent obstructions.

The principle of the syphon is perfectly familiar to every Sanitary Engineer. Let us apply this elementary principle of our own trade to present conditions of business.

In our advertisements we have pointed out the vast opportunities for plumbing enamelware sales in Canada. This business is not going to flow of its own accord; it requires effort—priming. Every one of us in the plumbing trade must co-operate to raise the flow of business up the

Start the Syphon?

short leg of the syphon and over the turning point —nor can we stop there. Every plumbing manufacturer, distributor, and artisan, must work to keep the flow clear and prevent its interruption.

There must be fair and honest production with fair and just wages; there must be a square deal for every employee; there must be harmony and co-operative "team-work" that will keep the flow of business running through the great syphon of the plumbing business. Discords now, with prosperity near at hand, would be fatal.

Let there be no disputes and no internal dissensions. These would seriously interrupt the flow from Canada's great, and practically inexhaustible, pool of future business development.

Head Office:
ROYAL BANK BLDG., TORONTO

Montreal Showrooms:
234 BEAVER HALL HILL

Frank Folden, of Foldens P. O., Ont., is preparing plans for new \$5,000 residence and wants prices on hot air heating and plumbing.

* * *

F. D. Bainard and W. Glenn, of Glanworth, Ont., have been appointed a committee to secure plans for a new public library. Prices wanted on heating and electrical equipment.

* * *

Dennis Howe, sanitary and heating engineer at Ingersoll, Ont., will have the sympathy of a wide circle of friends in the trade in the death of his brother, Michael Howe.

* * *

Architect H. C. McBride, Molsons Bank Building, London, Ont., is preparing plans for alterations to the residence of Dr. Rogers, at Ingersoll, Ont., including new bathroom.

* * *

Prices are wanted immediately at London, Ont., on a centrifugal water pump, 3,000 gallons capacity per 24 hours, 65 foot head. E. V. Buchanan, general manager Utilities Commission.

* * *

Plans are to be prepared for new steam heating system in connection with St. Peter's cathedral. Mgr. McKeown, the Palace, London, Ont., will look after all arrangements.

* * *

Prices are wanted immediately on lead-covered cable and cast iron junction boxes by the Utilities Commissioners at London, Ont., who plan to put all electric wires in the downtown district underground. Estimated cost, \$50,000. Work will proceed during the summer.

* * *

A. L. Oatman, 412 King St., London, wants prices in connection with a steam heating system for large residence.

* * *

R. Martin, 76 Smith St., London, Ont., wants prices on hot air heating, plumbing and electrical work in connection with new \$4,500 residence.

* * *

Bull Bros., 363 Hamilton Road, London, Ont., are building a new garage in connection with their plumbing shop.

* * *

O. L. Ferris, Harrow, Ont., wants prices on heating and plumbing for new \$5,000 bungalow on which work will commence immediately.

* * *

Sidney Jermyn, Granton, Ont., has commenced erection of \$5,000 bungalow and wants prices immediately on hot air heating, plumbing and electrical work.

* * *

Mayor Wigle, M. T. Murney, Chairman of the Water Commission, and Dr. A. C. Hunter, M.O.H., have been appointed a committee to arrange for the installation of a mechanically operated filtra-

tion system at Goderich, Ont. The matter is now being taken up with the Provincial Health Department and it is expected that the work will proceed in a few weeks.

* * *

The Water Commission at St. Marys, Ont., plans to proceed shortly with an extension of the water main on Queen Street and laying of water services. Estimated cost \$5,000. W. Cole, secretary. Prices wanted on materials.

* * *

R. B. Samuel, Kingsville, Ont., is preparing plans for new residence to cost \$4,000 and wants prices on heating and plumbing.

* * *

Louis Bloch, Owen Sound, Ont., wants prices on heating and plumbing for eight new residences he is planning to build on 2nd Avenue East.

* * *

B. H. Bloodsworth, Listowel, Ont., will receive tenders until April 30 for heating, plumbing and electrical work in connection with new \$8,000 rectory for the Anglican Church.

* * *

Fred Wright, Amherstburg, Ont., wants prices on heating, plumbing and electrical work in connection with new \$4,000 residence to be erected this spring.

* * *

The town of Hanover, Ont., plans to expend \$82,000 this summer on the in-

stallation of a filtration system and rebuilding the water tower which collapsed some time ago. The town has been advised by Dr. Wodehouse, district medical health officer, that provision must be made for sewers emptying into the river at a point below the proposed filter. Under present conditions the sewers of two factories enter above.

TILE SEWER TENDER WANTED

Pt. Dalhousie, Ont.—Sealed tenders, marked "Tender for Sewers," will be received up till noon on May 9th for the laying of about 9,000 feet of tile sewers, also separately for the supplying of the tile and manhole covers.

Plans and specifications may be seen either at the Village or at the office of the Engineer, Robert W. Angus, 217 Continental Life Building, Toronto.

The lowest or any tender will not necessarily be accepted. W. G. Sutton, Reeve.

PROGRESS ON NEW TORONTO WATER SYSTEM

New Toronto.—One of the pumps of the town's new water system has been installed in the pumping plant and the other is ready for installation. When all the pumps are in operation there will be five pumping filtered water and two pumping raw water. The two new pumps will account for 2,000 gallons per minute.

Imhoff Disposal For Peterboro

Officials of Provincial Department of Health Discuss Peterboro's Sewage Disposal System With City Officials

PETERBORO, ONT.—After insisting for a year or more that Peterborough must adopt the activated sludge type of sewage disposal plants, the Provincial Board of Health has at last consented to the installation of the Imhoff system for which City Engineer Parsons and the city council had fought since investigations had raised a doubt of the success of the activated sludge method.

The concession gained by the city was virtually wrested from the Provincial Board by a deputation composed of Mayor McIntyre, Aldermen Whitehouse, City Engineer Parsons, Mr. T. Tooms, M.L.A. They met the Hon. Walter Rollo, Dr. J. W. S. McCullough, Provincial Health Officer, and Mr. Dallyn, the board's engineer.

A statement that Peterborough was delaying the building of a sewage disposal plant in an evasive way was warmly repudiated by Alderman Whitehouse. It was pointed out that this

city's objections to the activated sludge system, which the board had ordered to be employed here, were based on the fact that it was still in the experimental stage.

The members of the deputation declared that they wished to co-operate with the Board of Health, but on this question they held that they should not be compelled to use the activated sludge system instead of the older and better known Imhoff method.

Hon. Mr. Rollo and Dr. McCullough discussed the matter with the deputation at considerable length, and in a very friendly way acceded to Peterborough's wishes.

This means that City Engineer Parsons, supported by the council, has won the last round in the dispute with the Provincial Board, and also that the city has no further reason for postponing the commencement of the sewage disposal plant.

Form Plumbing and Heating Baseball League

Plumbing and Heating Supply Houses and Sanitary and Heating Engineers of Toronto Form Baseball League

A BASEBALL league has been organized in Toronto under the name of the "Toronto Plumbing and Heating Supplies League," which is made up from the plumbing and heating supply houses of Toronto and the domestic, sanitary and heating engineers of Toronto.

It has been felt for several years that such an organization would be of great benefit to all those who could enter, as it would foster a friendly spirit among the various supply houses and provide means of recreation, and since the formation of this league it has been discovered that there are a large number of ball players who have recently contributed to the standard of this sport in this city in other leagues.

The following firms will be represented in the league:—

Crane Limited, Grinnell Co. of Canada, Master Plumbers' Association, Dominion Radiator Co. Ltd., Jas. Morrison Brass Co. Ltd.

The officers elected at the recent meeting were as follows:

Honorary presidents—G. A. Vowell, W. L. Horn, James Morrison, P. McMichael, John Wright; president, H. Ford; vice-president, W. Boddington; sec'y-treasurer, P. H. Jack; auditor, G. F. Frankland.

The league will be composed of strictly amateur players, who must comply with the rules of the C.A.A.U.

It is already seen that there is considerable interest being created by the formation of this new league and some real interesting contests are expected. In the future this league, it is hoped, will increase in membership.

Waterworks, Tenders, Construction, Contracts Awarded, Etc.

TENDERS WANTED

Calgary Alta.—General contract for erection of residence costing \$9,000 is awarded to Alberta Home Builders, 816 18th St. W. Tenders will be received by general contractors for all sub trades. Plans with Major & Stacey Judd, architects, 231 8th Ave. W.

* * *

Hamilton, Ont.—Tenders will be received by owner for plumbing and heating for two residences costing \$20,000 for W. D. Armstrong, Spectator Bldg.

* * *

Montreal, Que.—Filion & Freres, 2417 St. Denis St., will receive tenders for plumbing required for residence costing \$10,000.

* * *

Dauphin, Man.—Alex. Melville, architect, 401 Bank of Nova Scotia Bldg., Winnipeg, is revising plans and will call new tenders for erection of theatre estimated to cost \$50,000 for Dauphin Theatres, Ltd., Winnipeg.

* * *

Ioco, B.C.—General contract for erection of six residences costing \$17,204 for Imperial Oil Co. is awarded to Dominion Construction Co., 508 Richards St., Vancouver. This is first of actual unit awarded for what will be a model town of about 100 homes. Contract was originally let to Cut-to-Fit Building Co.

* * *

Amaranth, Man.—Plans will be revised and new tenders called for erection of

school estimated to cost \$25,000 for Consolidated S. D. of Flora, No. 1534.

* * *

Hamilton, Ont.—F. Sullivan, 203 Hunter St. E., will erect duplex apartments costing \$10,000 for D. Sullivan, 175 Young St., and will receive tenders for plumbing and heating.

* * *

Beulah, Man.—John Spalding, secy-treas. Miniota, Mun. S. D., Miniota, Man., has plans and will receive tenders until May 3 for erection of school estimated to cost \$30,000. Plans also with E. D. Tuttle.

CONTRACTS AWARDED

Sault Ste. Marie, Ont.—Plumbing and heating contracts for addition and alterations to high school are awarded to Mitchell & Cooper, Adams Block.

* * *

Ottawa, Ont.—Plumbing and heating contracts for school costing \$500,000 for Public School Board, 222 Gilmour St., are awarded to McKinley & Northwood, 56 Rideau St.

* * *

Toronto, Ont.—Heating and plumbing contracts for alterations to County Bldgs. for York County Council are awarded to H. G. Waterman & Co., 38 Hazelton Ave., and Keyes & Co., c/o James Proctor & Redfern, Ltd., Engrs., 36 Toronto St.

* * *

Truro, N.S.—Erection of school cost-

ing \$100,000 for school board. Plumbing and heating contract at \$14,000 is placed with Dexter & Co., 549 Prince St., Truro.

* * *

Lachine, Que.—Plumbing and heating contracts for departmental store costing \$30,000 for J. O. Tessier, 118 10th Ave., are awarded to B. Pilon, 80 11th Ave.

PATTERNS FOR SLOPING HOPPER Continued from page 17

Observe the plan lines represent base lines and therefore we pick each line separately as B-1, B-2, B-3, 4-A, A-5, A-6, A-7 from plan and set them on similar numbered lines over from H-1 which gives points 1-2-3-4-5-6 in true lengths. Draw lines to point H and you have the true lengths for the upper part of plan.

In the same way pick the lower lines of plan as C-1', C-2', C-3', etc., and set them on similar numbered line to the right of H-1 in diagram. This gives points 1'-2'-3'-4', etc.

When lines are drawn to point H you have the true lengths. In this case lines are not joined as the points are all we want.

Before the pattern can be set out we must find the true girth along the slope line 1-7 of elevation, since the girth along this line is considerably longer than the circumference of the circle in plan.

To do this square out right angle lines from each point as 2-3-4-5-6 in elevation and with dividers pick the half diameter lines from plan as 4'-4, 3'-3, 2'-2, and set them as 2-2', 6-6', 3-3', 5-5', 4-4' in elevation at "M."

Then through these points as 12'-3'-4', etc., sketch a uniform curve and you have the desired girth. Now to set out the pattern we proceed exactly as was explained for the former drawing where the top line was horizontal. In this case we start by drawing a line as B-C, equal to B-C of plan. Then with true length lines H-1 and H-1', we strike and cross arcs as in point 1 of pattern. After this for the girth spaces we use those spaces from M in numerical order, and developing each point as we go along. In this case we place the seam in the throat, but this can be set where desired. And the pattern can be set out in as many pieces as desired for convenient assembling. Laps must be allowed extra.

Backgrounds, fittings and display fixtures all out of line with the goods is another error made by many store-keepers, and many a good article has lost its power by being placed on a broken or rusty fixture. For example, a store on Yonge Street, Toronto, placed a display of auto grease in the window the other day. The same was arranged on a glass shelf and was subject to the direct rays of the sun. Before long the heat of the sun on the glass shelf melted the grease and it ran down and along the bottom of the window.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

PIPING forms the chief feature of the price changes this time and a new list on pipe shows a reduction on wrought pipe as well as on steel. Other declines include Canada plate, bar iron, black and galvanized sheets, plumbers' oakum and brass supply pipe. Some wholesalers are quoting an increased discount on enamelled wares and brass compression work is also weaker and price cutting is reported on different lines. Solders have been advanced slightly and the lead market shows firmness. No changes have been made on radiation, corrugated sheets, range boilers, soil and conductor pipe, or cast or malleable fittings. A better tone is reported on ingot metals and tin and lead show advances. In the primary

steel markets there is not much increase of activity, but prices are considered to have been stabilized, and little further change is expected in the near future. The Steel Corporation prices have been accepted as a basis and the independents having come up to those prices while they were below it is thought that present prices are likely to hold.

A little improvement is reported in a few lines, but, taken altogether, buying is still slow, and although manufacturers and wholesalers are looking for an improvement as the season advances and new houses are needed badly it is recognized that new building construction is not being proceeded with as rapidly as might be.

MONTREAL MARKETS

MONTREAL, April 29.—The feature of the market on plumbing and steam fitting lines is the new list, No. 51, showing lower prices on wrought iron and steel pipe. Other lines lowered include Canada plate, oakum, iron and steel bars. Enamelled ware is now on a very unsettled market, price-cutting being evident among manufacturers and jobbers. Many lines of compression goods are in the same situation. Black and galvanized sheets are revised with lower prices given, while corrugated sheets, eavestrough, conductor pipe, radiators, hot water and steam boilers, boiler tubes, range boilers and cotton waste are unchanged. Linseed oil and turpentine have advanced during the past week. Ingot metals are continuing firm.

No Change in Soil Pipe

Montreal.

There is no change in soil pipe since the change in discounts two weeks ago. Sales are improving as the weather opens, but are still moving in small shipments for this time of year. Following are quotations:

SOIL PIPE (medium and extra heavy)—
2, 3, 15%; 5 and 6-inch, 20% discount.
4-inch, 25% discount.
8 inch, add 20% to list.

FITTINGS—
2 to 6 inch fittings, 40 per cent. discount.
8-inch, net.

Enamelled Ware Unsettled

Montreal.

A reported "break" is the information gained on enamelled ware. The continued steady market of the past months of this year is said to have given way to a series of price cutting to obtain business. One local jobber claims they are now quoting from 10 to 15 per cent. below prices given under. For instance, the five-foot bath tub showing at \$41.12 is now selling at \$34.00 at this source.

Different reasons are given for the present unsettled condition, but the most feasible one is that prices were considered too high and manufacturers and jobbers are taking it in their own hands to reduce them. A new price list is expected in the near future. Following are quotations that have been ruling up to the present:

Sinks, roll rim, 18x30 in.	18 40
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$6 00 \$5 92 \$5 84
18 x 30	6 96 6 88 6 80
20 x 30	7 92 7 84 7 76
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	41 12
Bath tubs, 5½ feet	45 68
Lavatories—	
17x19" Apron F139 or P4045	12 24
18x24" Apron F154 or P3845 or P3847 ..	18 82
18x21" Apron F169 or P4205	14 08
17x19" Roll Rim, F241 or P4345	10 08

Closets Also Unsteady

Montreal.

There is also an unsteady market on closets, dealers making their own selling prices. Although newer quotations than these quoted below are not yet available, a discount of from 10 to 15

per cent. is given off these prices by most dealers. There is also a limited demand for closets, with little improvement expected until building construction commences more in earnest.

Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	17 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies, less seat	19 00

Plumbers' Oakum Reduced

Montreal.

A reduction has been made in the price of plumbers' oakum, and it is now quoted at \$3.75 per 50 pound bale, and ten cents per pound in broken quantities.

Brass Goods at Cut Prices

Montreal.

The list prices on all lines of compression goods are unchanged, but are also on a very unsteady basis. In line with enamelled ware and closets dealers are offering more attractive figures to obtain business. New prices are expected in the near future in an effort to again settle the market. Following is list that has been the ruling figures in the past:

Compression work, standard	34%
Fuller work, standard	30%
Bath cocks, compression	25%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard ..	34%
Roundway stop and waste cocks, standard ..	34%
Brass steam cocks, standard	10%

Radiator valves, standard	23%
Do., removable disc	38%
Globe, angle and check valves, standard...	5%
Gate or straightway	Net
Jenkins globe	10%
Jenkins gate valves	10%

Canada Plate Lower

Montreal.

Although the present time is considered an off season for Canada plates, and there is very little moving, prices show a reduction this week. The outlook for the fall trade is very bright, the scarcity of last year being well overcome, and prices will no doubt be considerably lower. The present reduction brings the 60 sheet boxes down to \$9.00, and the 52 sheet \$8.75.

Eavetrough, Etc., Now Selling

Montreal.

Eavetroughing, conductor pipe and conductor elbows are now in good demand. Manufacturers and jobbers are looking for these lines to be active from now on, particularly as dealers held off in their buying during the early months of this year, the time that bookings are generally forwarded. Quotations are holding at lists prepared early in the year and are as follows:

EAVETROUGH—			
O.G. Square Bead—			
	Per 100 ft.		Per 100 ft.
8 in.	15 90	15 inch	28 80

Pipe Fittings Revised

Montreal.

A revision on some lines of pipe fittings is made. There is no notable change in prices, however, while the demand is keeping up fairly well. Stocks are in very good shape in all sizes. Following are present quotations:

Following are present quotations:		
Cast iron fittings		20%

Turpentine, Oil and White Lead

Montreal.

This week shows a much firmer market on linseed oil and turpentine, ad-

vances being made in both cases. White lead in oil is unchanged. In broken quantities, raw linseed oil is quoted at 91 cents, boiled 93 1/2 cents, turpentine \$1.00, containers charged extra. White lead in oil still costs \$14.85 per 100 pounds.

Radiation Still Backward

Montreal.

Radiators and boilers are still moving in limited numbers, in line with building activities. Dealers, however, are optimistic toward the future months of spring and summer, based on the prospects now in hand. Quotations are unchanged, being 48 per cent. off list for hot water and 49 per cent. for steam, wall radiation 45 off. It is anticipated that present prices will remain firm, based upon present productive costs, although it is reported radiators are now being imported at attractive figures, and this may have its results in the near future. Following are quotations:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.	
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount. 48% for hot water and 49% for steam.	
Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 45%.	
Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 55% off list.	
Square or sectional hot water or steam boilers, 15-in., 5%.	
For Ontario Government trimmings add 5 per cent.	
Square or sectional water boilers, 19-in to 36-in., 5% off list.	
Square or sectional steam boilers, 19-in. to 36-in., 5%. Ontario Government trimmings, net list.	
Round steam boilers, standard trimmings, 15 per cent. off. Ontario Government trimmings, 10%.	
All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.	

Boiler Tubes Slow

Montreal.

With the exception of the best selling sizes for repair work the movement of boiler tubes is reported still slow. Inquiries, however, are more numerous and an improvement is anticipated in the near future. Quotations are remaining unchanged as follows:

BOILER TUBES—		Seamless	Lapweld
1 inch		26 00
1 1/4 inch		27 25
1 1/2 inch		26 25
1 3/4 inch		29 75	27 00
2 inch		29 25	24 50
2 1/4 inch		33 00	28 50
2 1/2 inch		44 75	32 50
3 inch		49 25	40 00
3 1/2 inch		63 50	43 50
4 inch		85 00	55 50

Waste Selling Fairly Well

Montreal.

Cotton waste is now selling in good quantities, a continued improvement being noted in the last few weeks. Prices on all lines are holding, and following are quotations:

Cream, Polishing	0 22

Bars Now \$3.70 Base

Montreal.

Iron and steel bars have been lowered 30 cents per 100 pounds, bringing common bar iron, mild steel, band steel and sleighshoe steel down to \$3.70. Other bars have the same decline. These quotations are thought to be well down to bottom prices for some little time now, as the recent action of both the United States independents and the Steel Corporation in bringing their quotations to the same level has caused a much steadier feeling. Following are quotations at the decline:

Common bar iron, 100 lbs.	3 70
Refined iron	5 20
Iron finish machinery steel	3 75
Mild steel	3 70
Single reeled machinery steel	5 75
Band steel	3 70
Spring steel	5 00
Sleighshoe steel	3 70
Tire steel	3 90
Toe calk steel	4 60
Harrow tooth steel	3 85
Mining tooth steel, per lb.	0 23
Black Diamond tool and cast steel, per lb. 0 23	

NOTE.—Refined iron is approximately \$1.50 per 100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.
Flats, iron and steel, 3-16 and thinner, 50c per 100 lbs. extra.

Sheets Are Lowered

Montreal.

Lower quotations are given on black and galvanized sheets. The reduction on black sheets is slight, while the U. S. standard galvanized sheets are 50 cents lower throughout, English 75 cents on all gauges. These declines are made from present stocks in the jobbers' hands and are thought to be the steady basis for some time. The recent action of the United States independents and the Steel Corporation in bringing their quotations to the same level will in all probability have a steadying effect on all steel products. The present demand is showing a little better, and a continued improvement is now looked for. Following are present quotations, shown with a range, as the prices vary among the different jobbing houses:

PLATES—		
10 gauge	5 25	6 25
12 gauge	5 30	6 30
14 gauge	5 45	6 45
16 gauge	5 55	6 55
BLACK SHEETS—		
14 gauge	5 45	6 45
16 gauge	5 55	6 55
18-20 gauge	6 15	7 15
22-24 gauge	6 25	7 25
26 gauge	6 35	7 35
28 gauge	6 50	7 50
Sheets 36 in. wide, 10c per 100 lbs. extra.		
GALVANIZED SHEETS—		
U.S. Standard—		
10 1/4 oz.	8 75	9 75
28 gauge	8 25	9 25
26 gauge	8 00	9 00
22 and 24 gauge	7 85	8 85
20 gauge	7 65	8 65
18 gauge	7 65	8 65
16 gauge	7 50	8 50

English Standard—	Queen's Head	Fleur-de-lis
28 gauge	10 00	9 25
26 gauge	9 75	9 00
24 gauge	8 15	8 60
22 gauge	8 80	8 15
18 and 20 gauge	8 10	8 00

NOTE.—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Scrap Metals Very Quiet

Montreal.

There is little improvement in the scrap market and it remains very dull. The recent action of the United States steel mills is looked upon with interest, and is hoped to locate a demand for many scrap metals. Some dealers are of the opinion that an improvement is close at hand. Following are nominal quotations:

Dealer's Buying Prices.		
Automobile tires	0 75	
Yellow brass	0 05	
Red brass	0 08½	
Light brass	0 04	
Scrap zinc	0 04	
Lead, heavy	0 03½	
Lead, tea	0 02	
Light copper	0 08	
Heavy copper	0 10½	
Wrought iron, R. Rd., No. 1 per gr. ton	12 00	
Malleable scrap (ton)	11 50	
Pipe scrap (ton)	8 00	
Heavy melting steel	8 50	
No. 2 busheling	4 00	
Boiler plate	0 08	
Boiler plate	0 11	
No. 1 machinery cast	25 00	28 00

Corrugated Sheets Unchanged

Montreal.

There are no changes to report on quotations of galvanized corrugated sheets. The demand continues to improve and dealers anticipate some steady business now that the weather has opened, stocks being very low throughout the country. Following are the unchanged quotations:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	9 50
No. 26 gauge	10 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00

Less 7½%.
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

Fair Sales of Range Boilers

Montreal.

Range boilers are moving in small orders, one and two being forwarded where dealers last year were buying in quarter and half dozen lots, but orders are numerous and general throughout the country. Quotations are practically unchanged, although on the 30 gallon standard boiler prices are \$12.00 and \$12.50. On the electric welded the same is selling from \$10.50 to \$11.50 for the standard and \$14.65 for the heavy. Following are quotations on all sizes:

RANGE BOILERS—	Standard	Ex. Heavy
30 gallon	12 50	15 00
35 gallon	15 00	17 00
40 gallon	17 00	19 00
52 gallon	24 00	28 00
66 gallon	32 00	38 00
82 gallon	40 00	50 00
100 gallon	50 00	60 00
120 gallon	60 00	70 00

Lead Products Firm

Montreal.

A much firmer market is shown on lead products this week, and an advance of one cent per pound is made on all solders. There has been a firmer ten-

dency prevailing in the past few weeks, but this is the first advance made on any of the products. Pig lead continues to show strength in the primary market, and it is generally believed that the bottom has been reached. Following are quotations:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs. sq. ft., lb.	0 10½
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 27
Do., strictly, lb.	0 25
Do., commercial, lb.	0 22
Do., wiping, lb.	0 22½
Do., wire, lb.	0 35
Zinc, sheets, casks	0 13
Do., broken lots	0 13½

Piping Declines: New List

Montreal.

A new list, No. 51, has been issued and is effective from April 25 on steel and wrought pipe. One-eighth inch pipe remains unaffected, and the reductions on ¼ inch and up vary in amount, the previous basing having been changed. Small reductions are made on wrought pipe from the 1-inch size up. The following is the new list:

Price List No. 51. April 25th, 1921.
Standard Butt Weld Pipe S/C
Per 100 feet.

Size	Steel		Gen. Wrot. Iron	
	Blk.	Galv.	Blk.	Galv.

4 1/2 in.	85 73	108 59	1 16	1 39

TORONTO MARKETS

TORONTO, April 29.—Wrought iron pipe has been reduced and forms the outstanding feature of this market. This is the first change in wrought iron pipe since July. Enamelled wares have been lowered 10 per cent. by wholesalers, but closet prices are nominally unchanged. Other reductions include brass supply pipe, plumbers' oakum and Canada plate. Prices have been adjusted on some makes of torches and firepots. Prices are held without change on radiation, range boilers, corrugated sheets, eavestrough and conductor pipe, bar iron and steel and pipe fittings. Lead and zinc products show firmness although actual advances have not yet been made. Brass compression work is weak with price-cutting reported. Scrap metals are showing no change and are still slow. Ingot metals display a better tone and tin and lead are higher.

Little change is visible in business, but though sales are not improving very rapidly, dealers are still optimistic.

Wrought and Steel Pipe Down

Toronto.

The April 1 issue of Sanitary Engineer announced a new lower price list on steel pipe, the second decline within a month, and another reduction became

5 in.	99 90	126 54	1 35	1 62
6 in.	1 30	1 64	1 76	2 10
7 in.	1 75	2 23	2 32	2 75
8L in.	1 84	2 34	2 44	2 89
8 in.	2 12	2 69	2 81	3 33
9 in.	2 54	3 28	3 36	3 98
10L in.	2 35	2 99	3 12	3 70
10 in.	3 03	3 85	4 02	4 76

Ingot Metals Continue Firmer

Montreal.

The ingot market this week continues to show an improvement, and the sentiment seems decidedly better. Buyers are also more interested in the different lines, and although this might be stated as being only a seasonable condition, it is significant that a better feeling now exists, also very welcome when the past quiet months are taken into consideration.

TIN.—Tin has been quite strong in London, having touched the highest point since last February. Although this has eased off in the last few days, the market remains firm. The local price has advanced to 39 cents.

COPPER.—Little can be said of copper this week, the market remains steady and little change is looked for. Electro is quoted at 18 cents, casting at 17½ cents.

SPELTER.—This metal has been quite strong, especially in the United States, where it has touched 5 cents, East St. Louis. The market seems strong, owing to the better demand from the galvanizers. Local price unchanged at 8½ cents.

LEAD.—Lead continues firm in London and in U.S.A. the trust price has been advanced 10 cents per 100 pounds. It is hardly expected prices will go much higher at present. Local price unchanged at 6¼ cents.

ANTIMONY.—This metal is slightly stronger in New York, but the demand remains quiet, there is no change in the local price, 6½ cents for Chinese and 8½ for high grade English.

ALUMINUM.—Aluminum is still dull on the market, with price unchanged at 35 cents.

effective April 25, making four lists which have been in use in the past seven weeks. The new list, No. 51, shows a decline in wrought iron pipe as well as steel, and it is noted that there has been no change in the price of wrought pipe

since July, 1920. The changes do not follow the same rate all through and are based on the new scale issued by the Steel Corporation recently. One-eighth inch piping has not been changed at all. In wrought pipe the decline starts at the 1 inch size, the smaller sizes being left as they were. Business continues on a small scale but is said to be slightly improved. The new list follows:

Price List No. 51. April 25th, 1921.

Size	Standard Butt Weld Pipe S/C		Gen. Wrot. Iron	
	Blk.	Galv.	Blk.	Galv.

Pipe Fittings Held

Toronto.

There has been no further change in pipe fittings and these are held at the declines noted in the last issue of Sanitary Engineer. Sales generally continue light and stocks of wholesalers are reported to be adequate. The changes in piping have not affected the prices of wrought nipples. The following are current quotations:

Cast iron fittings	20%
Plugs, cast	27 1/2%
Do., solid	10%
Do., countersunk	Net list
Bushings	30%
Unions, 1/4 in. to 2 in.	40%
Do., 1/4 in. to 2 1/2 in.	35%
Dart-Unions, blk., 1/4 in. to 2 in.	29%
Do., 1/4 in. to 2 1/2 in.	14%
Do., galvanized, add to black	30%

MALLEABLE FITTINGS		
Class A	0 60	0 75
Class B	0 24	0 33
Class C	0 15	0 24

Soil Pipe Unchanged

Toronto.

A slight increase in sales of soil pipe and fittings is reported as the season is advancing, but the demand is still below the normal. With an increase in building construction an improvement in business is hoped for. There has been no change in prices and discounts are as follows:

SOIL PIPE—	
2 and 3 inch, 10%.	
4 inch, 20%.	

5 and 6 inch, 15%.	
8 inch, add 5 %.	
FITTINGS—	
2 to 6 inch fittings, 40%.	
8 inch fittings, plus 5%.	

Extra 10 p.c. Off Wares

Toronto.

Wholesalers are quoting an extra 10 per cent. off enamelled ware lists, and the discount is now 20 and 10 per cent. Jobbers hope that the reductions made by them will have a stimulating effect on business and with any increase in new building construction there should be a better demand for wares. Lists are the following:

Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5 1/2 ft.	57 10
All Steel Enamel Baths, 4, 4 1/2 or 5 ft., net	16 25

20 x 30	9 70 9 80 9 90
All above list except lines marked net.	
Discount 20/10% off these prices.	

Closet Price Held

Toronto.

No changes are reported in closet prices, but with the declines in other plumbing lines there is a weak tendency and many look for prices to be easier. Business is reported to be but little improved. Quotations are nominally the following:

Closet, standard outfit	\$32 00
Do., with post hinge seat	33 00
Do., white vitro, vitreous china or enamel-iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for 3/4 in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 80
Do., oak, or oak-vitro tank, with fittings, less seat	16 50
Do., white vitro, vitreous china, or enamel-iron tank, with fittings, flush elbow and supplies	18 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 40

Compression Work Unsteady

Toronto.

Although no definite change has been made in prices and the recognized trade discounts are supposed to be still in effect there is reported to be considerable price cutting in different lines and the market is unsettled. The tendency would appear to be downwards and brass goods in U.S. markets have recently undergone price declines. Some improvement in sales is reported but business generally is scrappy. Stocks are stated to be in fair shape. The following are the nominal quotations:

Compression work, standard	34%
Fuller work, standard	30%
Bath cocks, compression	25%
Do., Fuller	25%
Flatway stop and waste cocks, standard	34%
Roundway stop and waste cocks, stand.	34%
Brass steam cocks, standard	10%
Globe, angle and check valves, standard	5%
J. M. T.	10%

J.M.T. C.	15%
J.M.T. Gate Valves	15%
Gate or straightway	7/10%
Jenkins Globe	10%
Radiator valves, standard	23%
Do., removable discs	33%
Emco J. D. Valves	10%
Emco Check Valves	10%
Webber Gate Valves	15%

Canada Plate Reduced

Toronto.

Although this is not the season of the year when there is much demand for Canada plate, there has been a reduction in price and quotations are down to \$8.75 and \$9 per box. Supplies from England are available, it is stated, and there should be no recurrence of the difficulty that was experienced last season in securing deliveries of this commodity.

Eavestrough Sales Increase

Toronto.

A considerable improvement in sales of conductor pipe and eavestrough and ridging is reported. The opening up of the season has allowed repair work to be proceeded with and orders for material are encouraging. Prices are held unchanged and are as follows:

TROUGH (Eave)		
O. G., Square Bead and half round.	Size in	Per 100 ft.
8-in.	Per 100 ft.	15 90
10-in.	Per 100 ft.	17 70
12-in.	Per 100 ft.	21 20
Less 50/10 per cent.		

PIPE (Conductor)		
Plain, round or corrugated.	Per 100 ft. in 10 ft. lengths.	
2 in., in 10-ft. lengths, list	18 40	
3 in., in 10-ft. lengths, list	22 30	
4 in., in 10-ft. lengths, list	29 60	
5 in., in 10-ft. lengths, list	40 00	
6 in., in 10-ft. lengths, list	49 00	
Less 50/10%.		

Conductor Elbows Moving

Toronto.

There is a better movement of conductor elbows and sales are showing considerable improvement. Quotations remain unchanged and are the following:

CONDUCTOR ELBOWS—	
2 inch, list	\$5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 50%.	

No Range Boiler Changes

Toronto.

There are reported to be no changes in the prices of range boilers and wholesalers state that while there is a steady movement very little increase in sales is noticeable. Quotations on riveted boilers are given below and the electric welded boiler is being quoted at \$11.50 and \$11.75 in the 30-gallon standard size.

RANGE BOILERS—		
	Standard	Ex. Heavy
30 gallon	12 50	15 00
35 gallon	15 00	17 00
40 gallon	17 00	19 00
52 gallon	21 00	28 00
66 gallon	32 00	38 00
82 gallon	40 00	50 00
100 gallon	50 00	60 00
120 gallon	60 00	70 00

Radiators are Unchanged

Toronto.

No changes in lists or discounts are reported on radiation, and 48 per cent. for hot water and 49 per cent. for steam are still the quotations with 45 per cent.

off wall list. Not much improvement is shown yet in the demand for these lines and an increase in building activity is wanted to advance sales. Quotations are as follows:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
Discount 48% for hot water and 49% for steam.
Wall Radiators—6 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 45%.

Weaker Tendency in Bars

Toronto.

No changes are reported to have been made in wholesalers' prices in bar iron and steel since the last market report, but there is a weaker tendency and the trend appears to be downward. Jobbers state that their stocks while not heavy are ample for present requirements and little extra business could be secured by lower quotations. Buying is largely from hand to mouth still and reductions in prices do not stimulate it at all. The market appears to be more settled in the United States as a result of the price policy of the Steel Corporation and consumers expect but little change in the near future in prices. The present rate of pig iron production is about one-third of capacity. Quotations here are the following:

IRON AND STEEL

Common bar steel, 3-16 in. and lighter	\$ 4 50
Do., 1/4 in. and heavier	4 00
Common bar iron, 3-16 in. and lighter	4 50
Do., 1/4 in. and heavier	4 00
Angle base	4 10
Horseshoe iron	6 00
Tire steel	5 95
Band steel	4 50
Spring steel	12 75
Mining drill steel	23 00
Crucible cast sheet steel	35 00
Sheet cast steel	35 00
Sleighshoe steel	4 50
Norway iron	15 00
Toe caulk iron	6 70
Hoop steel	6 00

Plumbers' Oakum Lower

Toronto.

Quotations on plumbers' oakum are lower and for quantities the price is \$3.75 per bale. For small lots the price is 9 to 10 cents per pound.

Corrugated Sheets Selling

Toronto.

The demand for corrugated sheets is reported by some wholesalers to be showing considerable improvement. At this season of the year there is a quantity used for building garages and for roofing and other jobs. The bulk of the trade is being done in the lighter gauges. Prices are held unchanged and are as follows:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	9 50
No. 26 gauge	10 25
No. 24 gauge	16 00
No. 22 gauge	19 00
No. 20 gauge	22 00
No. 18 gauge	28 00
Less 7 1/2%.	

Lead Market Firmer

Toronto.

No changes are reported in prices of lead or zinc products here, although outside markets are firmer and solders have been advanced slightly. In the

primary lead markets there is a slight increase in price and there is a feeling that the bottom has been reached in lead. Stocks are smaller but are stated to be ample for the present rate of consumption and production is very much less than it has been during the past few years. The following are present quotations:

Lead pipe, list, per lb.	0 12 1/2
Lead waste pipe, list, per lb.	0 13 1/2
Do., over 8 in., list, per lb.	0 14 1/2
Lead pipe is subject to discount of 10%.	
Lead traps and bends	10%
Lead sheets, 4 to 6 lbs. sq. ft., in rolls, lb.	0 09 1/2
Cut sheets 1/2 c to 3/4 c lb. extra and cut sheets to size 1 c lb. extra.	
Solder, wire, lb.	0 34
Do., 40-60	0 26 1/2
Do., 50-50	0 29
Do., strictly, lb.	0 24
Do., commercial, lb.	0 22
Do., guaranteed, lb.	0 27
Do., wiping, lb.	0 22
Zinc sheets, per lb.	0 16
Calking lead	0 08

Copper and Brass Weak

Toronto.

No changes have been made in prices of sheet copper or brass but the tendency is reported weak, although the bottom is thought to have been reached in primary copper markets and an increase in copper prices is looked for. The following are market quotations:

BRASS—	
Sheets, base, per lb.	\$0 29
Rods, base, per pound	0 26
Tubing, base, per lb.	0 36
COPPER—	
Rods, base, per pound	0 34
Soft sheets, plain, 16-oz. and heavier, lb.	0 34
Do., plain tinned	0 40
Do., polished and tinned	0 45
Tubing	0 39

Boiler Tubes Easier

Toronto.

The demand for boiler tubes has not improved greatly and is still "scrappy." There has been a gradual easing of prices, which are showing reductions. The average quotations are as follows:

	Per 100 feet	\$
1 inch	\$28 00	
1 1/4 inch	30 00	
1 1/2 inch	32 00	
1 3/4 inch	33 00	
2 inch	35 00	28 00
2 1/4 inch	38 00	32 00
2 1/2 inch	46 00	36 00
3 inch	54 00	45 75
3 1/2 inch	70 00	46 00
4 inch	92 00	60 00

Sheet Quotations Lower

Toronto.

Prices on sheets and plates have eased since the last report but continue to show variations in different quarters. The range is given below. Business is reported to be light and though some improvement is shown, it is still "spotty." In U.S. markets there is stated to be little increase of new business and though the new prices have brought only a limited amount of new business sellers express no doubt that present prices will hold for some time as neither the Steel Corporation nor the independents seem disposed to reduce prices further at the present time. The following are the market quotations here:

BLACK SHEETS		
14 gauge	5 10	6 10
16 gauge	5 20	6 20
18-20 gauge	5 75	6 75
22-24 gauge	5 80	6 80
28 gauge	5 85	6 85

28 gauge	6 00	7 00
PLATES		
10 gauge plate	5 00	6 00
12 gauge	5 05	6 05
14 gauge	5 10	6 10
16 gauge	5 20	6 20

GALVANIZED SHEETS

Premier and Apollo

10 1/2 oz.	8 60	9 60
U.S. 28 gauge	8 20	9 20
U.S. 26 gauge	7 90	8 90
18 and 20 gauge	7 60	8 60
16 gauge	7 45	8 45
12 and 14 gauge	7 40	8 40

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charged on galvanized sheets, 10 1/2 oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

New "C. & L." Torch Prices

Toronto.

Prices have been revised on some of the Clayton and Lambert make of torches and firepots. The following are the new quotations on some of the better sellers:

CLAYTON & LAMBERT TORCHES.—No. 18, \$7.70; No. 31, \$9.70; No. 38, \$8.80.
FIRE POTS.—No. 71, \$16.50; No. 72, \$15.

Cotton Waste Holding

Toronto.

No changes have been made in waste prices and the demand is stated to be improving. The following are present quotations:

WASTE	
Cream, Polishing	0 22
WHITE

Above lines subject to trade discount for quantities.

Oil and Turps Firmer

Toronto.

No changes have been made in the prices of white or red lead, dry or in oil, but turpentine has taken an upward turn and is quoted 10 cents higher than at the time of the last report. Quotations for single barrels are now \$1 per gallon. Linseed oil is still at 77 cents per gallon for single barrels. Smaller quantities of both are 15 cents per gallon extra and containers are charged extra.

Scrap Metals Sluggish

Toronto.

The condition of the waste markets is still sluggish and the consuming demand shows no quickening. Buying is largely hand to mouth and few dealers look for much improvement for a while. Signs of improvement have not been lacking but manufacturers using waste have large stocks on hand. Prices are mostly easy but holders are waiting for higher prices and are not pressing sales. The

Made in Canada for Canadians

At the Sarnia factory **MUELLER** is now producing a complete line of Water, Plumbing and Gas Brass Goods of tested quality and proved efficiency — at exceedingly interesting prices.

To meet the requirements of the Canadian market **MUELLER** now offers the latest improved construction in Flush Valves No. A-3375.

MUELLER Imperial Flush Valves

are fully warranted to stand every reasonable test—are impervious to corrosion—have the well known **MUELLER** precision of manufacture—and can be depended upon to give absolute and lasting satisfaction.

The lever moves with the slightest touch—but cannot be held open to waste water. Specify No. A-3375 when ordering, or write for description and prices. Mail orders given prompt attention.

Old rubbers, boots and shoes	2 00	2 50
Overshoes, lumbermen's rub. boots	2 00	2 50
Bicycle tires	0 75	1 25
Automobile tires	0 50	1 00
Tea lead	1 75	2 00

Brass Supply Pipe Reduced

Toronto.

Prices have been reduced on brass supply pipe, and the $\frac{3}{8}$ inch, nickel plated, with reducing coupling to floor or wall is now quoted at \$2.36 per pair. The same in $\frac{1}{2}$ inch size are \$2.86 pair.

Ingot: A Better Tone

Toronto.

There is a better tone to metals this week, but the demand is not well defined and ingot metals are still very irregular. Tin has advanced $2\frac{1}{2}$ cents, lead is firmer, copper, however, is disappointing to sellers and is weaker. Spelter is more active and more demand is shown for the other metals.

TIN.—This metal has advanced $2\frac{1}{2}$ cents per pound on local markets. United States markets are higher on an advance of £6 in London and an advance of one cent in sterling exchange. A fair amount of speculative buying is reported. Quotations here are $38\frac{1}{2}$ cents.

COPPER.—Consumers are reported to be in the market for copper but are not very anxious to close orders as lower prices are reported. Foreign buying lacks animation in United States markets and a light domestic consumption is reported. The trend is toward weakness but prices are unchanged here at 18 cents for casting copper.

LEAD.—There is an improved demand for this metal and the tone is firmer on home markets and in the United States, but London markets eased off and prices dropped 7s. 6d. to £20 15s. for spot. Prices here advanced 25 cents to \$6.25.

SPELTER.—This has been the most active metal in the market and on United States markets has registered advances each day. Producers are not disposed to quote ahead. English markets are also firmer. Quotations here are unchanged at \$7.25.

ANTIMONY.—Increased inquiries have developed more strength on United States markets in this metal. Quotations locally are unchanged at 8 to 9 cents.

ALUMINUM.—An improved demand is noted and prices generally are unchanged. The local price is 30 cents.

WINNIPEG MARKETS

WINNIPEG, April 29.—The most important price changes in plumbing and steam fitting lines since the last report are new lower prices on wrought iron and steel pipe, cast and malleable pipe fittings, black and galvanized sheets, tinplate, sheet copper, galvanized range boilers, candle wick packing and plumbers' oakum. Business is gradually picking up in plumbing lines and prospects of further improvement appear good.

Candlewick Packing Reduced

Winnipeg.

A lower price is quoted on candlewick packing this week and it is now selling for 48 cents per pound.

Sheet Zinc Reduced

Winnipeg.

The price of sheet zinc has been reduced $7\frac{1}{2}$ cents per pound and is now selling at $17\frac{1}{2}$ cents per pound.

Galvanized Range Boilers Decline

Winnipeg.

The prices of galvanized range boilers have declined and are as follows: 30 gallon \$13 each, 35 gallon \$15, 40 gallon \$17, 52 gallon \$24, 66 gallon \$32, 82 gallon \$40, 100 gallon \$50, 120 gallon \$60.

Plumbers' Oakum Declines

Winnipeg.

A reduction has been made in the price of plumbers' oakum and the new selling price is \$5 per bale.

Wrought Iron Pipe Reduced

Winnipeg.

Declines have been made in the prices of steel and wrought iron pipe. The amount of the decline varies on different sizes. One-eighth inch pipe is unchanged and no reductions have been made in the wrought pipe below the 1-inch size. The new lists are not yet available.

Sheet Copper Declines

Winnipeg.

The price of sheet copper has declined slightly and tinned is now selling at 55 cents per pound and planished at 60 cents per pound.

Black and Galv. Sheets Decline

Winnipeg.

Prices have again been revised on black and galvanized sheets and are somewhat lower. The new prices which have been in effect for over a week are given below:

BLACK SHEETS —10 ga., \$7.15; 12 ga., \$7.15; 14 ga., \$7.20; 16 ga., \$7.30; 18 ga., \$7.80; 20 ga., \$7.80; 22 ga., \$7.85; 24 ga., \$7.85; 26 ga., \$7.90; 28 ga., \$8.15.	
GALVANIZED SHEETS —16 ga., \$9.10; 18 ga., \$9.25; 20 ga., \$9.25; 22 ga., \$9.40; 24 ga., \$9.40; 26 ga., \$9.55; 28 ga., \$10.15; 10½ oz., \$10.55.	

Tin Plate Declines

Winnipeg.

Prices for tin plate have declined this week and are as follows:

In Full Boxes—		Per Box
IC 20 x 28		\$23 75
IC 20 x 33		25 50
IX 20 x 28		27 00
IX 20 x 33		33 50
In Half Boxes—		
IC 20 x 28		\$12 50
IC 20 x 33		14 75

IC 20 x 39	18 00
IX 20 x 28	14 00
IX 20 x 33	17 25
IX 20 x 39	20 50

Pipe Fittings Reduced

Winnipeg.

Prices have been revised on malleable and cast iron fittings and the prices now in effect are as follows:

MALLEABLE IRON FITTINGS—

Class A—55% off list.

Class B and C—65% off list.

CAST IRON FITTINGS—

Elbows, Tees, Crosses, Return Bends, Caps and Lock Nuts— $12\frac{1}{2}\%$ off.

Boiler Elbows and Couplings—55%.

Reducers—20%.

Bushings—20%.

Plugs—20%.

Drainage Fittings—25 and 10%.

WROUGHT IRON NIPPLES—Close or Short—

4 in. and smaller—40%.

$4\frac{1}{2}$ in. and longer—30%.

WROUGHT IRON NIPPLES—Long—

4 in. and smaller—50%.

$4\frac{1}{2}$ in. and longer—40%.

RAILING FITTINGS—45%.

UNIONS—

Standard—35 and 5%.

Dart, $\frac{1}{4}$ to 2—15%.

Flanged, standard— $12\frac{1}{2}\%$.

Do., $\frac{1}{4}$, $2\frac{1}{2}$ to 4—5%.

Jefferson—15%.

FACTS ABOUT WARM AIR INSTALLATION

Continued from page 23

age of 25 per cent. In other words a loss of one-quarter of the efficiency of the pipe, which through back pressure greatly increases radiation of the pipe and casing into the cellar.

"Actual measurement of the fret work of an ordinary register proves that it occupies one-half of the rated size, therefore a 12-inch pipe should be provided with not less than a 14x16 register which has a free air area of 112 inches or one inch undersize, while good practice requires that the register should be 10 per cent. greater than the leader pipe.

"There are enormous quantities of pipeless furnaces being sold to farm homes. The sales in this direction has been so extensive that our government has taken cognizance of the subject and has published Farmers' Bulletin No. 1174 under date of December, 1920. This book treats in an elaborate manner both descriptive and illustrative of the proper use and installation of pipeless furnaces.

"I have reason to believe that the editor of the book is a member of the National Warm Air Heating and Ventilating Association. The book is an honest representation of facts, and if strictly followed will do much to promote proper installations."

M Brand Pipe Fittings, Screwed or Flanged, Black or Galvanized.

We are equipped to make the general run of malleable and grey iron castings for machinery manufacturers, agricultural implements, automobiles and specialties.

Cast Iron Fittings

stamped with our trade-mark mean fittings made with iron of high tensile strength—proper proportions and correct tappings.

RECESSED DRAINAGE FITTINGS

Malleable Fittings

of our brand mean fittings made of *Air Furnace Refined Iron*, reamed and tapped to gauge with perfect threads.

A trial of our pipe fittings will prove the quality of service they give.

True Economy **Stack Heater**

The Stack Gas Water Heater will heat water in one minute.

The almost perpendicular copper pipes in the Stack Heater offer no hindrance to the natural tendency of water to rise when heated.

Take notice of the small size and large number of coils; this means quick heat. The numerous small pipes will naturally heat water quicker than one big pipe because of the greater heating surface offered.

More hot water with smaller consumption of gas—that's true economy.

"Jewel Pipeless" Furnaces

The Finest One-Register Furnace on the Market

Right now we can see that the introduction of this furnace is going to make the year 1921 the banner year for our dealers, breaking all past sales records. This is only natural, because "Jewel Furnaces" have always been producers of large sales for our dealers, and the "Jewel Pipeless" contains the same high qualities that have made the name "Jewel" famous from coast to coast.

Your customers, when buying a heating apparatus, want mainly real Quality Heaters that will give good service for many years.

When you sell them a "Jewel" you sell them what they want.

All materials entering into the manufacture of "Jewel" Furnaces are highest grade and they are erected by skilled mechanics under the supervision of experts, which ensure the dealer and user entire satisfaction.

Safeguard your reputation as a furnace installer by selling your customer a "Jewel Pipeless," a furnace that is built on knowledge derived from experience.

Take another look at the illustration and ask yourself if the "Jewel Pipeless" is not the most durable, efficiently constructed, and neatest appearing furnace you have yet seen.

No other line offers you, Mr. Dealer, so great an opportunity to give to your customers the best that their money will buy.

 Water Jacket
 Grease Basin,
 Four Sizes.

**Water Jacket Grease Basin**

Water Jacket Grease Trap pays for itself and installations in hotels and restaurants in short time. Grease is skimmed off and soap is made. Stops all clogging at waste pipes.

A fixture that you can guarantee to meet all sanitary requirements.

Write for Catalog "B."

Wade Iron Sanitary Mfg. Co.

551 W. Fulton Street, Chicago, Illinois

**Clears
 Clogged
 and Frozen
 Pipes**

That's Why It Sells

Desolvo thaws frozen pipes because when mixed with cold water it creates heat in addition to its own action. It clears clogged pipes easily and without the aggravating and expensive tearing up of house and grounds. It has many points of appeal to customers, pays a good profit and sells easily and often.

Prompt Deliveries From Toronto Stock

Cone Top Tank Bulbs

A well-made, effectively-designed tank bulb. Its superior service in use reflects credit on your judgment and brings you other orders for installations. The material is first quality rubber. The top is heavily reinforced and the bottom is soft and pliable. The sizes available in stock at Toronto are: 2½", 2¾", 2¾" and 3".

"B & C" Floor and Ceiling Plates

There are good sales for these because they are the most popular plates offered to the Canadian trade. They are well made of best, cold-rolled steel, heavily copper-plated, and finished in nickel-plate. A narrow pattern that is suitable for twin connections or one-pipe work. Sizes ¼" to 4" are in stock.

Positive Circulators for Hot Water Heating

A Gravity Hot Water Heating System is expensive. By using a Positive Circulator you are able to cut down on pipe sizes and radiation to reduce the cost considerably. Positive Circulators are more efficient under the conditions met with in hot water heating systems than the centrifugal pump. In addition the circulators are so designed that they afford large free areas to allow good gravity circulation when the motor is not in operation. When the motor is in operation the circulator forces the hot water from the boiler to the radiators with a loss of only a few degrees in temperature. They will ensure an even distribution of heat when the radiators are scattered and it is impossible to get gravity circulation.

Write us for more details and let us point out to you some special features of Positive Circulators.

L'Association des Constructeurs de Quebec

"The Spectre"

By Guy Morton

"LONGREEN was not a quibbler.

"I am sorry, Grimley' — he came straight to the point—'but we are compelled to dispend with your services at the end of the month. Turner's for the past six months has been having a terrible pull. We got overstocked on the rising market and now, with the market falling every day and getting more and more into the customers' hands, we have to retrench or crash. We have chosen to retrench. Every stick of decorative employment is being cut out of the store. . . ."

What Spectre? The Spectre of Unemployment—a spectre which all too many have encountered during the past few months. If you have not personally encountered this spectre, so graphically described in its causes and consequences by Guy Morton, you may count yourself amongst the fortunate, but there will be no doubt as to your interest in his story. If you have encountered it, nothing can stop you, once you start this story, from reading it to its unusual and constructive conclusion.

It is a great piece of fiction, told by the same author who wrote "Personality Plus" in the March 15th MACLEAN'S.

Ten Others

"The Drama of our Great Forests":
Life and Love Return—

By Arthur Heming

This is the seventh installment in Mr. Heming's wonderful account of life in our northern forests and pictures the fascination of real romance in the wilds.

"Have Faith in Our Nationals"—

By Agnes C. Laut

There is no use always knocking, says Miss Laut. By a constructive policy of immigration and settlement, some of these deficits can be vastly reduced.

"Conversation vs. Closure"—

By J. K. Munro

Premier Meighen is struggling against great odds to carry through some constructive legislation. According to Mr. Munro, they are really not getting anything done at Ottawa—and he tells how they do it in his masterly, pungent, pithy, witty fashion.

"She Wasn't a 'Type' So She Became a Directress"—

By Edith M. Cuppage

The story of a B.C. woman who wanted to get into the movies—and got there, despite everything, in the administrative side.

"Heads Million Dollar Corporation"—

By Dorothy G. Bell

The story of a Canadian girl who went to the States with an idea that she might become a dancer, but has made for herself a niche as head of a million dollar financial corporation.

"Our Own Mediterranean"—

By Elton Johnson

What's what at the present time in regard to the movement which is on foot to make ocean ports of our Great Lake ports.

"Making Good on Four Ambitions"—

By Sinclair Laird

The story of W. S. Bullock, a member of the Provincial Legislature of Quebec Province, who did not know his multiplication table at 19 and is now a leading educationalist.

"Pawned"—

By Frank L. Packard

This masterly story of a triple regeneration is drawing swiftly to its conclusion; John Bruce and Crang meet again at death-grips.

"The Gates of Tien T'ze"—

By Leslie Howard Gordon

The first "gate" is entitled "The Gate of Wu" and starts off this thrilling, absorbing, melodramatic story with several full pages of gripping adventure.

"The Cage of Iron"—

By William Merriman Rouse

A story of an old man who thought he could take into his own hands the vengeance which the Creator intended should be left for Himself.

"JARDINE" and "TOLEDO" Pipe-Threading Tools

Interesting Features

The Jardine and Toledo have no cams or gimcracks to get out of order, and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

Sanitary Engineer

The Most Helpful Equipment in Business

To-day modern business is transacted with the aid of numerous equipment, counters and display windows and cash registers.

We can hardly get along without them — each has its saving in speeding up of daily sales, and yearly turnovers.

But now you add to other equipment, perhaps the most important of all — SANITARY ENGINEER, PLUMBER AND STEAMFITTER OF CANADA is the equipment for sending you new business ideas.

Properly applied ideas increase the hum of the adding machine. Business ideas quicken the ring of the cash register. Business ideas speed up sales and increase turnover. The ideas you will secure from SANITARY ENGINEER cover practically every one of your important business problems.

Ideas on selling, advertising, managing, financing, buying. Ideas on credits, collections, letter-writing, training salesmen, personal efficiency. Ideas on sewage disposal, technical problems, sheet metal draughting, and a wide range of other subjects. Ideas on stock keeping, inventory, accounting, records, and a hundred and one other business suggestions and methods.

Surely from such a productive source of ideas there will come many ideas of real dollar and cents value to you.

The 2-part TRAP— individually tested

When the Testing Stand at the factory puts the O.K. on a trap, that trap is ready for business. Installed on a radiator, it will stop the steam and pass the air and water. It will keep on doing this for—well, we don't know for how many years.

Many of the original traps after seventeen years of continuous service are still operating satisfactorily and with promise of working indefinitely.

Mechanically, the Dunham Trap is better today than it ever was. The principle of operation is the same today as when the trap entered the Patent Office. Of this fact, we are rather proud. To you, it will perhaps indicate that Dunham Standards are stable, and of known value, and can be depended upon to serve you.

We believe that you can profitably co-operate with Dunham Service. May we explain?

B-M Gas Water Heaters are made in Canada

Buy Canadian-made goods and refuse to buy any other, even to the extent of doing without—is our loyal duty now.

This applies — whether it's food, luxuries — or whether it's gas water heaters.

B-M Heaters are Canadian-made Gas Water Heaters with a reputation for high heating-efficiency and low operating-cost. Combining range boiler and heater in one they are installed with fewer connections, more easily and at a lower cost to your customer.

They save the plumber's time, at the same time give him a generous profit. Investigate B-M Heaters. Send for literature and prices.

FOR SALE—PLUMBERS' SUPPLIES OF ALL makes, at prices that protect the plumber. American Plumbers' Supplies, 14 Craig St. West, Montreal.

FOR SALE—PLUMBING, HEATING AND Sheet Metal Business, in one of the most prosperous cities of Western Canada. Has been established eight years and has good connection in city and country. This is a splendid opportunity for one or more live wires. With stock, tools and property, or sell stock and tools and lease the property. For particulars apply Box 936, Sanitary Engineer.

Mr. Plumber

Get in touch with those farmers in your vicinity who have no water and sewage installations.

Induce them to consider the advantages of running water and modern conveniences.

Science has demonstrated that isolated dwellings can be made just as sanitary

as communities, and the "Anthes" Syphon does for the farm what the trunk sewer does for the city.

Anthes Syphons are made in one piece, without seam or joint, and, operating on purely natural laws, with no moving parts to get out of order, they give great satisfaction in use.

PERFECTO

BRASS GOODS

None But the Makers
of Perfecto Brass
Goods Dare Give the
Perfecto "Two-to-One"
Guarantee

THE Perfecto guarantee is not only a protection for the plumber in case of dissatisfaction—it is a proof of our faith in Perfecto Brass Goods. And the most significant feature of the guarantee is not that we stand ready to make it good—that, of course, is a fact—but that *we do not have occasion to make it good.*

"If any genuine Perfecto article should prove defective in workmanship or material, we will willingly replace it with *two* perfect articles." We couldn't give a guarantee like that if Perfecto Brass Goods were anything short of perfect. Yet that is the guarantee that goes with every Perfecto article.

So that when you instal Perfecto Brass Goods there can be no question about the customer's being absolutely satisfied, and a constant, living testimonial for yourself.

TINKER TOM'S TALKS.

No. 311

YE GRAND BLUFF!

We had just said to a friend: "Talk about Made-in-Canada, why we never hear a sound these days from a lot of jobbers and manufacturers who were mighty glad of our service and prices when things were different.

There's no such thing as APPRECIATION"—and just then a Prince of the realm phoned an order for a car of "PREMIER" GALVANIZED STEEL SHEETS, and a wire came in ordering another car, and the mail man brought an order for a third car!

It looks like a beautiful day to us now, and we're hoping the weather has changed to

Quality

is an essential in the upbuilding of any business with permanence. Quality is one of the three legs of the Tripod of Business. This Tripod is as necessary to the stable support of business as is the Famous Tripod of Life—the heart, lungs and brain—to human existence.

Efficiency

represents the second leg of the business tripod. Without efficiency there can be no success, because efficiency signifies a satisfactory relation between the result obtained and the effort invested. We burn so much coal to obtain a certain horsepower in steam. We invest a given sum of money in business; if the business is efficient it produces a satisfactory return.

Service

is the positive complement of Quality and Efficiency, without which they could no more stand alone than could a three-legged stool with one leg lacking. The amount of our service to society at large is practically the measure of our receipts from the world—especially in business.

PILOT

Superior Pipeless Furnace

Its Advantages Secure Present and Future Profits

When you specify, or install, Pilot Pipeless Furnaces, you are not only giving your customer good service and a square deal, but building good-will and future business.

Pilot Superior Pipeless Furnaces cost less to install; they do not block up the cellar with a lot of costly pipes; no remodelling of the house is needed, merely one hole cut in the floor.

In this effective, pipeless system, the heated

air leaves the central portion of the one large register, circulates through the house, because lighter than cold air, and, having warmed the rooms, cools and returns to the lower levels of the house. There it enters the outer portion of the register into an exterior casing of the furnace. It is then reheated by passing over the hot castings of the furnace. Ask for literature, to-day. This Pipeless Furnace is going to pay you!

— A Boiler Bolshevist — How It Started And Where It Ended

By Booster Biny

The day after Bill Bunday dropped that length of soil pipe on his favorite corn, I dropped in his store to see if the sulphur had cleared out of the air yet. There was still a sniff or two left.

But no sooner had it all finally gone, than in came a chap and dumped out a couple of hundred cubic feet more.

Furthermore, he was grimy with soot and shaking his fist like he was sure enough hunting for somebody. I slid around behind one of our boilers and, from the improvised breast works, asked him where he got the Bolshevik bomb stuff.

Let's pass over the painful particulars and the words of emphasis.

The whole trouble seemed to be that he

had been cleaning the soot out of his boiler.

One of those boilers that has a way of hiding the clean-out doors in all kinds of inaccessible, cute little places. He was there to take it out of Billy Bunday's hide for selling him such a boiler.

To make a longer story still shorter; Bill has got to take out a boiler and put in a Burnham.

Come closer while I whisper it, the name of the other one.

One with the clean-out doors *all* on the *front*.

He is sending him a Burnham.

Next time, want a word with you about the things that most folk know, being the things that most folks don't know.

JARDINE

"JARDINE" and "TOLEDO" Pipe-Threading Tools

No Complicated Parts to Get Out of Order

Jardine and Toledo Pipe Threading Tools have no cams or gimcracks to get out of order, and the dies only cut with the mouth of the cutter. The dies open out as the tool advances on the thread, so as to make the proper taper. This means that there is no friction on the pipe and every ounce of strength is used in making the cut, saving time and labor. These are but a few of the valuable features of these tools.

The A. B. Jardine Company, Limited, have much of interest to the Sanitary Engineers of Canada. An examination of our catalogue will point new ways to profit for you.

We are the sole makers of "Jardine" Pipe Threading Tools and sole licensees to make and sell the "Toledo" Machine.

EFFICIENCY FACTS versus BIASED OPINION

Made-in-Canada

SPENCER WATER-TUBE STEAM BOILER
Capacities 1,000 to 10,000 sq. ft.

MODERN boiler construction versus antiquated types, IS positively demonstrated in the construction and operation of the SPENCER Self-feeding Boiler.

It is the only type of boiler on the market that will successfully burn all of the various sizes and grades of fuel in a positively smokeless manner, with minimum attention and the greatest economy.

Every owner of a Spencer Boiler is privileged to purchase the lowest priced fuel in his particular district. These facts were conclusively proven during the memorable months in which the fuel rationing ordinance was in vogue, especially in Eastern Canada. REMEMBER, the name of the Spencer Self-feeding Boiler stands for the best heating service known at this age, either for Hot Water or Steam in any type of building.

A few installations will drive home to you these **EFFICIENCY** facts.

Fortunes that are made and lost

OIL! Men grow rich in an hour. Stocks rise and fall like meteors. A mighty industry yet in the making. Giant pumps that pull from the very bowels of the earth the juice that drives the tractor or lights the city, or lubricates its mill-wheels, or heats a thousand homes.

To most men, that's the oil country. But to you, this scene has still another meaning. Look past the romance of it all and see the thousands and thousands of miles of just plain pipe!

Think of the elbows, joints, unions, all worked into a compact, serviceable system ready for any strain put upon it.

That system made possible the modern oil-well, a thing for the plumbing and steam-fitting trade to be proud of. The tools that cut those threads

are not the old fashioned, experiments of a decade ago but the same quick-acting sure-working servants that you find in any good workman's kit today.

GTD has built a line of pipe tools that are earning the praises of thousands of users.

The GTD Receding Pipe Threader will make it possible to thread pipe three times as fast—the "Trio" Die Stock will net you in dollars, twice as much work as you have been getting, and the GTD Pipe Wrench will give you longer service and better wear than any tool you ever held in your hand. These are not extravagant claims—but merely plain statements of the facts which we believe every man on a big plumbing job today ought to know and make use of.

Tinsmiths No Longer "Manufacturers"

Budget Speech of Minister of Finance Announcing Extension of Sales Tax Principle Also Removes Tinsmiths From Category of Manufacturers—Luxury Tax and Business Profits Tax Abolished—Changes in Value for Duty on Imported Goods

IT is a matter of considerable gratification to certain retail merchants, including tinsmiths, that the Finance Minister in presenting the annual budget has seen fit to abolish the regulation of the Department of Inland Revenue and Customs requiring certain retailers to take out a manufacturer's license and collect a two per cent. tax. It is difficult to think of any government regulation that was more unpopular and unjust and therefore the reform gives the retailers who were affected cause for being joyful. It is general knowledge that the test case was being fought out in the courts and that a judgment was being anxiously awaited, but of course any judgment rendered now must be declared null and void, according to authorities who have examined the matter closely.

The section of the budget which relieves tinsmiths from responsibility as manufacturers is as follows: "The excise taxes as specified are not to be payable on goods exported or on goods or sales of goods made to the order of each individual customer by a business which sells exclusively by retail, under regulations by the Minister of Customs and Inland Revenue, who shall be sole judge as to the classification of a business; and a drawback may be granted of 99 per cent. of the said taxes paid on materials used, wrought into or attached to articles exported."

Sales Tax Principle Extended

In proposing new taxation to raise revenue the Minister of Finance has extended the principle of the sales tax, whereby after May 10 the tax upon sales by manufacturers in Canada to wholesalers and by wholesalers to retailers will be 1½ per cent. on each transaction instead of the former 1 per cent. The tax on sales by manufacturers or wholesalers directly to consumers will be 3 per cent. In the case of importations by wholesalers the tax will be 2½ per cent. of the duty paid value of the goods, but in case of importations by retailers or

TAX AND TARIFF CHANGES IN BRIEF

Business Profits Tax abolished.

Luxury Taxes Abolished.

50 per cent. increase in general sales tax collected by manufacturers and wholesalers.

Increase in tax on goods imported by wholesalers and retailers.

Customs valuation stabilized by changing value of goods for duty figuring exchange when adverse to Canada and not allowing depreciated currency to appear on invoices below 50 per cent. of normal value.

Imported goods to be marked with name of country of origin.

Plan to strengthen anti-dumping law.

Tinsmiths relieved from manufacturers' license.

consumers the tax will be 4 per cent. New rates are effective on all goods imported or taken out of warehouse for consumption and to goods imported for which no entry for consumption was made before May 10th.

The luxury tax and the business profits war tax have both been abolished.

Legislation also provides for strengthening the anti-dumping law in Canada and for stabilizing customs valuation by figuring the exchange where it is adverse to Canada and by providing that the depreciated currency of certain other countries cannot go below fifty per cent. Imported goods are to be marked, where possible, with the name of the country of origin, in both English and French.

Commenting upon the extension of the sales tax to raise necessary revenue the Minister of Finance stated that the imposition of a general turnover tax had been advocated by many organizations, but that it had been found that many retailers kept no books and that the cost of collection of such a tax would be unduly great.

May Not Be Passed On to the Consumer

No provision is made that the sales

tax must be shown separately on invoices and it is contended that the increase will not necessarily be passed on in full to the consumer. It is thought in some quarters that competition will lead to the absorption of at least a portion of the new sales taxes into production costs and prevent the passing of the full amount of the taxation to the public.

No General Tariff Revision

No general revision of the tariff schedules is proposed at this time, partly due to the fact that settled tariff legislation in the United States has not been decided upon. The changes in tariff schedules are confined to adjustments for the purpose of carrying out the terms of the trade agreement with the British West Indian colonies and to certain other adjustments made necessary by the repeal of the few remaining luxury taxes.

Three important amendments to the Customs Tariff Act are included in legislation introduced. These are designed to protect Canadian interests against unfair competition from foreign countries. In proposing them the Minister of Finance stated that much of the un-

employment in Canada resulted from the importation into Canada of goods at prices below the cost of production. He therefore proposed to enact that goods be valued for duty at a figure in no case lower than the wholesale price at the time in the country of origin and that the value for duty of new or unused goods should in no case be less than the actual cost of production of similar goods at date of shipment direct to Canada, plus a reasonable profit thereon.

Consider State of Currency in Country of Origin

Another amendment provides for taking cognizance in valuation of goods for duty of the state of the currency of the country of origin. The law as it stands provides for valuation in the currency of the country of export. Under a customs ruling this currency has been accepted on the basis of existing rates of exchange. The amendment provides that "in computing the value for duty of the currency of an invoice, no reduction shall be allowed in excess of 50 per cent. of the value of the standard or proclaimed currency of the country from whence the goods are invoiced to Canada." It also enacts that "in respect of goods shipped to Canada from a country where the rate of exchange is adverse to Canada, the value for duty of the currency of the invoice shall be computed at the rate of exchange existing between such country and Canada at the date of the shipment of the goods.

To illustrate these points take for example the German mark, the standard value of which is approximately 24 cents and which has depreciated greatly. By the suggested amendment the mark can never be accepted in the valuation of an invoice for duty at less than 12 cents (50 per cent. of its proclaimed value). On the other hand if an article selling in the United States at \$10 is imported into Canada at a time when the rate of exchange is 10 per cent., the valuation of the article for the purpose of collecting Canadian customs duties will be \$11. If the rate of duty is 30 per cent. the revenue collected on that article will be \$3.30 under the new legislation compared with \$3 under the former basis of value for duty.

Mark All Imported Goods

The third amendment calls for the marking of all goods imported into Canada in English and French, to indicate the country of origin. This provision is to enable Canadian consumers to know the source of the goods purchased and is in accord with the wishes of manufacturers who have complained that goods have been sold as British, for example, when they were never manufactured in the United Kingdom. This latter amendment is not effective until September 1 next, after which unmarked goods will be liable to an additional 10 per cent. ad valorem duty as a penalty and a fine of \$1,000 or imprisonment for persons violating the legislation with

Presents Report of Ottawa Conference

Honest Endeavors to Facilitate Building Operations—Development of Apprenticeship Plan—Revision of Wage Scale Advocated— Report of Montreal Secretary

At the monthly meeting of the Master Plumbers' Association, the secretary, David K. Trotter, presented a report on the business transacted at the Builders' Conference held in Ottawa last week, under the chairmanship of the Minister of Labor. He indicated in detail the composition of the employers' party and that of the employees. With regard to the latter he pointed out that all individuals were intimately associated with international labor unions, while on the employers' side were a number who were not employers of building labor at all, others were engaged in the industries which were only remotely connected with the building industry. The practical results, he said, of the conference might be briefly indicated as follows. First, that both sides came together in an honest endeavor to facilitate building operations throughout the Dominion. Second, an apprenticeship plan was developed for the building trade which, while it might not be adopted in full force, might

nevertheless serve as a guide to those trades who are anxious to have the apprenticeship system revised in their own rank.

Third, the conference unanimously agreed that where at all possible both sides, by discussion, should, in those cities where wages paid in the building trades are at a very high level, revise these scales and bring them into conformity with wages paid at the present time in other towns and cities, taking into account the decreasing cost of living, if any.

The secretary then submitted a proof in English and French of the schedule of work which it to be put into force at the earliest opportunity. At the suggestion of the secretary, P. Latourelle and J. E. Walsh were appointed a committee to revise the French version.

A letter was then read from the secretary of Local 144 asking that arrangements be made to hold a meeting between the Master Plumbers and the members of this Union.

intent to conceal information given in the marks, stamps, brands or labels.

Reviewing the situation Sir Henry Drayton pointed out that revenues for 1921-22 from the sources of 1920-21 would reach \$372,600,000 and that the amount of money needed is \$435,360,971. Thus the amount to be secured by additional taxation this year is \$62,760,971.

While the luxury taxes have been abolished, duties will be levied on certain articles on much the same basis. Playing cards come within this category and cards not exceeding \$24 a gross in value will be taxed 8 cents a pack. Cards exceeding \$24 a gross will be taxed 15 cents a pack.

Under the heading of exemptions, foodstuffs figure most prominently. Among them, however, are enumerated ores of metals of all kinds; fuel of all kinds; materials for use only in the construction, equipment and repair of ships; electricity; gas manufactured from coal; calcium carbide or oil for illuminating or heating purposes.

Not Applicable to Exports

The excise taxes as specified are not to be payable on goods exported or on sales of goods made to the order of each individual customer by a business which sells exclusively by retail, under regulations by the Minister of Customs and Inland Revenue, who shall be sole judge as to the classification of a business; and a drawback may be granted of 99 per cent. of the said taxes paid on ma-

terials used, wrought into or attached to articles exported. This section relieves tinsmiths from being classed as manufacturers.

License Fees.

Every manufacturer, producer, wholesaler or jobber may be required to take out an annual license for which a fee not exceeding \$2 will be charged. The penalty for neglecting to take out such license will be \$1,000.

PETERBORO FILTRATION CONTRACTS LET

Peterboro.—Contracts for the construction of a mechanical gravity sand filtration plant here, at an estimated cost of \$350,000, were let by the local utilities committee.

The W. H. Yates Co. of Hamilton was given the contract for the construction of the plant itself, at its tender price of \$198,378. The \$65,800 tender of Ramsay & Wilde, of Sault Ste. Marie, for the filtered water reservoir, and the \$8,950 tender of the Escher-Wyss Co., of Montreal, for the pumps, were accepted.

In all 42 tenders were submitted and in each case the lowest bid secured the contract. The three tenders total \$273,137. The pipe lines will be laid by the committee itself. Work on the construction of the plant will be begun at once.

The ideas for running a plumbing goods showroom, as outlined in this article, are well exemplified in the display shown herewith of a typical showroom, where the value of good display facilities is fully appreciated. The showing of the various fixtures for kitchen and bathroom in an enclosure, gives a better idea of how these will look when installed in the home.

“Back Street Workshop Days are Gone

For Anyone Who Hopes to Own a Big Business,” Says St. John, N.B., Plumber—Showroom Has Stimulated Business—Never Leave Store Unattended

“THE days’ of a workshop in a back street are past and gone with any plumber who hopes to own a big business.” These are the words of J. E. Byrne, of Byrne & McGeouch, plumbers and steamfitters, St. John, N.B., to Sanitary Engineer.

Mr. Byrne went on to say, “We have tried the old method of only having a workshop, but since we established ourselves in our present store, our business has increased by many times. If we had been told that a store would mean such an increase in business, we should have been inclined to doubt the statement.”

A few years ago Messrs. Byrne and McGeouch decided to open up a store in connection with their plumbing business, and the question arose, should they locate in the business section, or in the residential part of the city. After going carefully into the matter they decided to open up their store in one of the best class streets in St. John, in the residential section, but very near to the business

centre. They secured a corner store in one of the finest blocks of buildings in the city, which has proved to be a very successful venture, in spite of the exceedingly high rent they are compelled to pay.

Let Public Know Where You Are

One of the first steps taken was to have an enormous sign painted on the outside wall of the store. This sign has been a business getter from the day it was painted. Being in such a prominent position, nobody can go along the street without noticing it, and considering that many of St. John’s wealthiest citizens live in the locality, and go up and down the street many times a day, it was not many days before hundreds of people knew that Byrne & McGeouch had come on the scene. Attractive window displays are made, showing baths, closets, sinks, wash basins and bathroom fixtures.

The floor of the window is covered

with imitation tiles, and the background painted in white enamel. A stenographer is in charge of the store, and attends to customers, takes orders, answers telephone calls and looks after the office work. Messrs. Byrne & McGeouch do not believe in leaving the store unattended for one moment during the day. Many orders are received that were missed in former days by having their workshop locked up while all hands were away on a job. The stenographer takes in many orders from business men on their way to their offices or stores, and also makes many sales to ladies out shopping during the afternoon, who think that a plumber is the right man to go to when buying bathroom necessities.

The store is devoted entirely to the plumbing and heating requirements. Byrne & McGeouch do not believe in handling any side lines whatever, theirs is purely a plumbers’ store. Speaking on advertising with L. P. McGeouch, he

said, "We have not as yet done any extensive advertising in the newspapers, but have confined our advertising to slides in the moving picture houses, and, by carefully studying the different affairs that are carried out by the prominent citizens, we have bought space in their programs. Program advertising is not always looked upon by the general merchants as one of the best means of publicity, many merchants treat the cost from a donation standpoint. We have found that as there are so many citizens of good standing interested in these affairs, and take home the program as a souvenir, it is an advertisement that works for us for many weeks after the affair is past and gone. We also believe in calendars, and this year we distributed a large number. I would add that a calendar is not much use from an advertising standpoint unless it is attractive. If it is attractive it will be hung up in the house in a prominent position, but if it is not much to look at the chances are that it will be thrown in the ash barrel, and the plumbers' good money will be wasted. We consider our best advertisement to be the work we do, and our aim is to make a thorough job of all we undertake. We stand at the back of all our work, and the many customers who recommend us to their friends proves to us that our efforts are appreciated.

A Common Failing

"We never promise to commence a job at a certain date, and then not turn up. This is a great failing with many plumbers, and I believe that more money is lost through this neglect to keep promises than many plumbers realize. I believe that we should treat jobbing work in the same manner as the merchant treats his business. In other words, we should put service first."

At the rear of Messrs. Byrne & McGeouch's showroom is their office and workshop. A good stock of fittings is carried, and with the modern workshop appliances they have, they are able to turn out work in the shortest possible time. Both Mr. Byrne and Mr. McGeouch are practical plumbers. Sanitary Engineer noticed that they were sound believers in the value of trade papers, and on their desks were many publications published in the interests of the plumbing business. This firm has handled many large jobs, and are prominent whenever tenders are called for heating and plumbing work.

EFFECTIVE DISPLAY OF PLUMBING

An unusually attractive window and store display combining plumbing and electrical goods and fixtures was recently arranged by Cowans, Brantford, Ont. The ceiling of the window was hung with fixtures for electric lighting of homes. There was a wide range for prospective customers to select from and they were kept lighted night and day.

Brass Goods Manufacture Again Active

Resumption of Automobile Industry and Export Trade Have Helped Canadian Brass Goods Manufacturers

RENEWAL of activity in the automobile industry and an increasing export demand have provided improved conditions for Canadian brass goods manufacturers, according to A. H. Tallman, secretary-treasurer the Tallman Brass & Metal Co., Toronto.

Without appearing too optimistic and yet discounting any need for pessimism Mr. Tallman states that the sales of his company for March were double those of either February or January and further increases are anticipated in the next few months.

"Of course, it is a gradual process to get back to anything like we were before the slump came. We are a long way from normal yet, but as I see it there is a healthy undertone that augurs well for the upward trend increasing in volume. I think that by summer conditions will be better than they are now," he said.

Mr. Tallman stated it was well that the process of declination and restoration of conditions had come gradually. Without being gloomy at all, he believed that in certain spheres the decline had not run its full course as yet, but any disadvantages that might accrue through that were more than out-

weighed by the healthy stimulus all industry seemed to have derived of late.

Export Trade

Respecting the export trade, Mr. Tallman said this market at present was limited to South America and South Africa. He did not care to hazard an opinion how fruitful these markets would prove for Canadian-made brass goods, but to date the volume of sales had been very encouraging. Shipping services were good, and customers had made prompt payment. One circumstance in connection with the South African market that afforded his firm satisfaction was the fact that English manufacturers had always virtually controlled it until recently, when Canadian manufacturers began to get a footing there. The latter had found that there was a good demand for high-class brass fixtures.

The domestic market was reported as being good by Mr. Tallman, with indications pointing to a gradual but steadily increasing volume of sales. Revival of the automobile industry had also brought increased business to the company, mainly in the form of aluminum castings.

The variegated glass globes and the various metal finishes made a setting that carried an instant appeal to home makers and involuntarily created the desire for possession. Right up at the front of the store and so close to the window that it could easily be seen was a display of bathroom mirrors, snow white lavatories, bath tubs and bathroom fixtures. Close at hand were vacuum cleaners, electric washers, more electric fixtures and all were ready for demonstration. There was something of interest to hold the prospect everywhere he or she turned, and it was something that was obviously an improvement for the home and would make for easier work or more comfort. The creation of an atmosphere of this kind is invaluable from a sales standpoint. In many cases it means that the prospect practically "sells himself." He is so favorably impressed with what he sees and its manifest utility that only a demonstration is required to close the sale. Cowans finds that it pays and pays well to arrange displays of this kind.

NEW EXECUTIVE OFFICERS IN PEASE FOUNDRY CO.

Changes are announced in the personnel of the executive organization of Pease Foundry Co., Toronto. Mr. Allen Case, Toronto, has been elected president

of the company, and R. J. Millar, who was general manager, is now vice-president and general manager.

Discussing conditions in the heating industry with W. E. Fice, sales manager of the firm, Sanitary Engineer was informed that the expectation is for a big revival of business during the last six months of the year, similar to the condition of 1919. Judging from reports coming to hand and the amount of new building of medium grade houses now being conducted, Mr. Fice stated it as his belief that the last six months of the year will see a demand for heating facilities which may result in some shortage of supplies. He stated that many houses were being finished up without provision made for heating, this being sometimes left to the purchaser, to select his own heating and in other cases it was the result of builders waiting until the last minute in case of further price reductions.

* * *

O. H. Willison, of the Lyman Tube and Supply Company, Montreal, has just returned from a six weeks' trip to England, where he spent a month at the plant of the Hoffmann Manufacturing Co., manufacturers of ball and roller bearings. The Lyman Tube and Supply Company will carry a large stock of Hoffmann equipment in their Canadian warehouses.

Heating and Ventilating

Combination Heating Systems

Seventh article of an important series, written exclusively for Sanitary Engineer
by N. A. Kearns

(Continued from last issue)

ALTHOUGH it is possible to heat a building without making provision for ventilation, it is, nevertheless, advisable to provide, whenever possible, some means of introducing fresh air into and exhausting the foul air from the building.

In some cases the fresh air inlet is provided and reliance for ventilation is placed on accidental leakage. Perhaps the leakage is better than no exhaust system at all, yet it is, at best, more or less of a makeshift method of ventilating a building. Therefore, whenever it is possible to do so, some arrangement should be made for the venting of the foul air, as well as that for the admission of fresh air. However, it is the fresh air inlets alone to which we would now direct attention. A later article will illustrate a method frequently used for exhausting foul air from a residence.

Outside Cold-Air Duct.

When cold air is taken from out of doors it should not be taken from a point less than six feet from the grade line. Fig. 1 shows a typical outside air inlet.

This drawing shows the duct turned at the top so that the mouth of the inlet will be protected from snow and rain. A bird and insect proof galvanized iron screen is placed in the inlet.

It will be noted that the inlet opens to a rather large chamber. This increase in the size of the cold air passage is to provide for the equalization of the air currents. If the inlet duct should be carried to the furnace connection without change of area, the fluctuations of pressure in the outer atmosphere would cause sudden gusts of air to pass through the furnace, and thereby reduce the heating effect to a considerable extent. When a fairly large equalizing chamber is provided the flow of air through the ducts is fairly constant.

The damper at the fresh cold-air intake may be set in any position made necessary by the various conditions of weather: in cold windy weather the inlet may be almost entirely closed, and in mild weather entirely opened.

Two Inlets.

A cold air inlet such as that shown by Fig. 1 must be placed only on the windward side of the house. This is because such an inlet provides for the admittance of outside air from one direction only. If an inlet like this should be placed on the leeward side, it is altogether likely that the air would

be drawn out of the house by way of the underground duct and equalizing chamber.

Fig. 2 shows an arrangement for two cold-air inlets, installed to provide for a positive inflow of air when the wind current is from either of two different directions. An arrangement like this is termed a "cross-over."

Each cold air inlet must be fitted with a tight damper, and the damper so connected that the act of closing one will open the other.

Furnace Pit.

All of the accompanying drawings show the cold air duct as an underground passage to the furnace.

When an underground duct is carried right up to the furnace casing it will be necessary to provide a pit for this setting. Fig. 3 shows a typical pit for the ordinary portable furnace.

The walls of the pit are circular in plan, and are built of brick.

The inside diameter of the pit should be equal to the inside diameter of the furnace base-ring. The depth of the pit will vary from 12 inches to 18 inches,

as the size of the furnace may demand.

At the centre of the pit a brick pier is to be built. This pier should be set with its corners turned in the direction of the flow of cold air.

It will be noted that the greater part of the weight of the furnace must come on the bottom casting of the ash-pit, and unless the casting appears to be strong enough to bear this load the pier should be placed close to the back of the pit.

The floor and walls of the pit should be water-proofed with cement with which some water-proofing compound is mixed.

The cold air opening, or openings, may be made in any part of the circle. However it is not advisable to make a cold air opening directly under the ash-pit door unless the covering plates are made extra strong and dust-proof.

Tests to Determine Inside Casings of Pipeless Warm Air Heaters

Construction of Inside Casing on Pipeless Furnace is Important—Many Furnaces Being Sold Without Casings

THERE are a number of manufacturers who are selling pipeless furnaces without casings, simply shipping the castings and allowing the dealer to manufacture his own casing, writes the manager of the furnace department of a manufacturing plant.

"Recently one of our travellers sent in turers did not realize the importance of the proper construction of the inside casing on a pipeless furnace. We were convinced of this because of the large variation discovered in the circulation and in the efficiency of the different makes of furnaces that we tested when we brought out the present line of furnaces, he states.

Recently one of our travellers sent in an order for some pipeless furnaces without casing. In order to see whether we were fanatical or not in regard to our views we tested the matter out thoroughly as follows:

We began just after lunch, weighed the paper that started the kindling, weighed the kindling and coal, made a record of the time and number of pounds of coal put on the fire as the test went along. We took a test every fifteen minutes of the velocity and the temperature of the air coming from the register, also the temperature of the outside casing at a point half way between the register and the bottom of the furnace. We kept this test going all afternoon, held the fire over night and ran the test all the next day.

We then uncased this furnace and put an inside casing on made only of black iron, without any air space, without any lining, or, in other words, the crudest inside casing that we could conceive of anyone building. In other words we took out the 16-inch asbestos board and the corrugated iron that we use on the construction of our inside casing. I might say that this iron is made up in a special machine that we have which makes a sharp edge, making the point of the contact with main casing the very least that it is possible to have. The asbestos board is placed between the flat casing sheet and the corrugated iron and is not pasted to the casing but is held in there loosely by means of the rivets going through between the two casings.

After we had put in place the poor inside casing we proceeded to duplicate our firing the same as we had the first day, building our fire at exactly the same time with exactly the same amount of paper, kindling and coal. We replenished the fire at exactly the same time and used exactly the same number of pounds of coal, or, in other words, we duplicated the

operation so far as producing heat was concerned.

Results

We shall not go into detail to give you all the different readings we had during these two tests, but we will give you the high points.

Test of Furnace with Good Inside Casing

With the furnace running at the highest possible speed we developed a velocity of 795 feet per minute as the speed of the air coming from the register. We also want to state that the hotter we got our furnace the faster the air circulated, which was as it should be. The hottest we could get our outside casing was 190 degrees. The temperature of the air coming from the register was 410 degrees.

Test of Furnace with Poor Inside Casing

We began this test by duplicating the firing method exactly. We took the first test after fifteen minutes and then the second test at the end of the next fifteen minutes or thirty minutes after the fire had been started, and we found both of these tests showed that the speed of the air was increasing. But at the end of forty-five minutes, or at the time to take the third test, we found that the speed of the air had dropped down to the point where it was between the readings taken at the end of 15 and the end of 30 minutes. From that time on the circulation dropped back until it became so slow that when the furnace was running at a good rate of speed it dropped down to only 160 feet per minute. The outside casing raised to the extreme temperature of 375 degrees. Not only did the air slow down and not only did the heat go out through the casings, but the circulation of the air was so slow and so poor it did not carry the heat away from the castings, and the furnace became so hot that we were afraid that it would melt and run. The thermometer that we were using at the register line only recorded up to 642 degrees and the circulation of the air was so slow through the furnace that it became so overheated it broke the thermometer because of the expansion of the mercury in the thermometer.

A few minutes after the thermometer broke the room became so hot that it melted off one of the heads of the sprinkling inductive ballast is used in the arc ling system and a flood of water came down upon us which stopped the test and automatically turned in the fire alarm. It was very plain to see the difference between a good inside casing on a furnace and a poor one.

About three years ago the furnace industry dropped to the lowest point on

account of the poor installation of pipe furnaces.

Along came the pipeless furnace, which gave the user more heat for less money in the way of fuel, better distribution of heat than was the case in the poorly installed pipe job.

We do not say that a pipe job can not be put in that is better than a pipeless job. But we do want to take things as they are and say frankly that there have been more poor pipe jobs put in than there have been good ones.

The public is interested only in results. They have come to a conclusion that pipe jobs are not satisfactory and are demanding pipeless furnaces. The pipeless furnace has grown to large volume. We predict that if the manufacturer does not build a real inside lining and insist that this be used on each and every one of his pipeless furnaces that we have reached the high point in the pipeless furnace business and that it will begin to drop off.

QUESTIONS AND ANSWERS

Question.—Would you kindly advise me through your columns who was responsible for our standard known as the British thermal unit, and, if possible, how it was arrived at? In calculating heat values, would it be possible, using gas or coal as fuel, that this standard would vary in either case? I presume not. Further, would you state on an average job how many B.t.u.s are necessary to be delivered to the water in cast iron standard radiation to maintain 70 degrees F. of temperature, with a difference of 85 degrees between the inside and outside, on 1,500 square feet of direct hot water radiation?—H. S. D.

Answer.—The standard measurement of heat quantity in common use in English speaking countries and designated as the British thermal unit (B.t.u.) was, we believe, originated by Dr. Joule, of England.

It was by a series of careful experiments that the originator discovered the quantity of heat required to raise the temperature of one pound of water one degree.

The standard is the quantity of heat required to raise the temperature of one pound of water from 62 degrees to 63 degrees F. For temperatures above 63 degrees it takes slightly more than one B.t.u. to effect the change in temperature. For temperatures of less than 62 degrees it takes slightly less. However, the differences either way are so small that for ordinary purposes it may be assumed that one B.t.u. per one degree is a uniform standard for all temperatures.

No matter what kind of fuel is used the standard of the B.t.u. never varies.

On an average job of 1,500 square feet of direct hot-water radiation it will be necessary to supply 225,000 B.t.u. per hour.

Simplified Bookkeeping for Plumbers

What Data Everyone in the Plumbing Business Should Have
At All Times Concerning Their Business—The Bill and Charge
System—Tenders Should Be Recorded in Black and White

By Wm. Parker and E. J. Lehl, Lethbridge, Alta.

IT is a pretty big order to recommend a system of book-keeping to suit the businesses of all the members of this association. No one particular system would suit you all. We have to consider quite a lot of things when putting in a system of accounting that will function with success, but the following system is adaptable to any business with very slight modifications.

You may be able to afford good office help or only cheap help or perhaps you only have your books written up at intervals. Still the system or general principles will be the same.

In most cases there will likely be a shop with several journeymen and helpers, a show room, but the business not generally engaged in merchandising. In a business of this description the proprietor in former times could manage along with a rough and ready method of keeping track of things, and in most cases he knew just about where he was at. In some cases, however, especially in the case of the new starter, he did not know where he was at, and found himself out of luck. Anyway at the present time you have no option, you are up against very stringent Government regulations as to the accounting end of your business and you are compelled under very severe penalties to keep a complete record of your business.

We want the system as simple as possible, but there is no magic about book-keeping and it has to be carried out from start to finish.

There is nothing in this paper pinched from text books and I am advising what I know to be practical and well tried out.

What You Should Know

Everyone engaged in the plumbing business ought to know:

The profit they make on each contract.

The profit they make each month or at the end of each three months against expense and overhead. That is to say net profit.

The amount they owe at any date.

The amount owing to them at any date.

The amount of their liquid assets at any date.

The above information is of vital importance to any business man, and if your wholesaler and banker know that you are keeping tab as above, they will carry you to the limit.

We now come to the outfit we require, and you all know a lot depends on the tools you have to work with.

You will require to do the thing right:

A loose-leaf private ledger, sometimes called the general ledger. This will have two sets of indexes, one for private accounts and the other for purchase accounts.

A loose-leaf customers' accounts ledger.

Duplicate bill and charge system.

Synoptic or daily analysis.

Payroll book.

Counter check books.

Duplicate job sheets, numbered and padded.

Time sheets, padded.

Estimate sheets.

Shannon files.

Filing cabinet, vertical system with folders.

I will explain as shortly as possible how to handle the above.

We will take first of all the

Counter Check Book

This is the most important book in our system, and it is advisable to have a book about half as wide again as the usual store counter check book. It is to be used for recording:

Material taken to and from jobs.

Goods sold to customers, charge accounts.

Goods sold to customers for cash.

Cash received from customers.

Cash paid out other than by check, and any other shop or store transaction not recorded on job slips.

Every day or at frequent intervals tear out the duplicates and file on binders. You will require a binder for

Material.

Charge sales.

Cash sales.

Cash received from customers.

Cash paid out.

Now it is imperative that every shop or store transaction except those recorded on job slips should be made through your counter check book. You are not in a position to keep a stock record but you will be in a position to check up most anything in case you are suspicious of a leakage.

Every journeyman should have his own counter check book. It can be used for small C.O.D. jobs. It is no great trick for him to present your bill at the end of a small job and return with the money, thus saving you considerable trouble in collections. He will have his material slip in his counter check book and it is an easy matter for you to mark the prices for him.

Job Slips

A job slip is indispensable. They

should be in duplicate, padded and numbered.

A proper form of job slip should show:
Date order received.

Who ordered by.

Name to be billed and address.

Address of job.

Character of work to be done.

Then about 10 or 15 lines with money column for quantities and time.

At the bottom of sheet:

Workman's name and space for number of hours.

Helper's name and space for number of hours.

Date job finished.

Printed instructions as to turning in job slip, etc.

You file the duplicate in the office and give workman the original when he is sent out to the job. On the completion of job he will fill in a list of material used. This you can check up from the material slips and complete the duplicate you have on file from the time sheets. You now have an invoice in the rough and you pass it along to the bill and charge system.

The Bill and Charge System

This consists of a post binder with in dex. I recommend billheads 8½" by 7¼", with plain yellow sheet the same size and punched to fit binder. You can buy the whole outfit of post binder, invoices and yellow sheets, and transfer binder. The cost is very little. Or you can use an ordinary Shannon file. The principle is just the same.

A sheet of carbon paper is placed between the billhead and yellow sheet, and then the bill is made out on the typewriter or with indelible pencil. The yellow sheet is then filed in the binder and the amount later posted to the customers' ledger. This method obviates the necessity of writing items in a day book and gives you an accurate record of each bill. Give the number of the job slip on the bill and mark the job slip "entered."

Treat in the same way any charge slips in the counter check book binder, except that seeing that they have already had a bill of the goods you can keep the original in the binder until the end of the month in case the customer makes further purchases during that month.

In order to know that your billing is correct and also for your synoptic entries, you will list the job slips and counter checks marked entered. The to-

tal of these should agree with the total of your invoices.

When listing you will require a sheet with three money columns, viz., for total, material, and labor.

When you have balanced your charge book, file your job slips and counter checks away for future reference.

Synoptic

The synoptic is the easiest and most popular method of analyzing your daily business. You can buy a synoptic with any number of columns. We shall require ours to have sufficient columns to take the following headings:

Private ledger.
Purchase accounts.
Customers' accounts.
Cash.
Bank.
Stock and material bought.
Stock and material sold.
Labor.

Expense, and a couple of columns for special use left blank.

You will start your synoptic with the total of your

Purchase accounts in its own column.
Customers' accounts in its own column.
Cash on hand in its own column.
Cash in bank in its own column.
Material in its own column.

As the total of the debits and credits must always agree in the synoptic, we then have to make an entry to balance them in the private ledger column.

The object in starting off this way is so that at any time we can tell at a glance how we stand without having to turn up and do a lot of figuring with the ledger balances controlling them. That is to say we can always see how much we owe by taking the debits from the credits of the purchase column, and the same method shows us the amount of customers' accounts, cash on hand, cash in bank, material, sales, expenses, etc.

In a big business it is usual to post the totals of the synoptic monthly and start afresh each month. This is not necessary and the average business can carry the footings forward until the end of the financial year.

We also have a great advantage in taking off a trial balance at any time. We are able to divide our trial balance into three sections and balance each separately. This makes it very easy in locating errors. Take, for instance, our customers' ledger. We look at our customers' accounts column and find that there is a balance of \$3,405.69; we then take off the balances in this ledger and if the balances do not come to this sum we know that we have made a mistake in posting and set about to find the mistake. When we have found it we know that more than one-third of our trial balance is O.K. We use the same method with the purchase ledger. When we have proved this to be correct, we only have the private ledger to balance. We take the balances we find there and

list them with the totals we find in the synoptic, leaving out the totals of the column marked private ledger. We thus divide our work in finding our balance into three different jobs and make it comparatively easy.

If you require information as to your sales, etc., monthly, all you have to do is to deduct the total brought forward from the previous month and the difference is your sales for the month, and so on. Keep this information in a small loose-leaf note book handy for your pocket or private drawer. You can keep in this information covering many years, and it is interesting to look back to.

Keeping Track of Tenders

In the private accounts column you keep track of all tenders. Open a special account for each tender. When the tender is completed and all charges made, mark the account transferred to contract profit and loss, and carry the footings both debit and credit to this account. You will then have in this account a complete list of your contracts showing the profit and loss on each one, and by adding the totals you will see how much profit you have made on the volume of contract business you have done.

It would take too long to go into details as to the various entries you will most likely make in your synoptic, and if you don't know anything about book-keeping you had better get permanent or occasional help. In the case of only being able to afford occasional office help, then it is up to you to make an entry without fail of every transaction that takes place. Your counter check books, job slips, check book and time sheets will cover most everything, and you will be able to do your billing yourself.

Overhead has raised a lot of discussion at all times and I would advise including your overhead in your expense column each month. You will have to make entries each month when you have ascertained your overhead. You can find out what your insurance, interest, taxes, etc., will most likely be. Then divide each by 12 and every month make entries in your expense column charging up this one-twelfth and crediting a reserve for each item. You will then have at all times a record of your total general monthly expenses and overhead expense. When you pay your insurance say, you don't charge up insurance, you charge up the reserve account you have for insurance, any balance showing in this at any time will be for insurance prepaid and will show as an asset on your financial statement. The overhead will vary largely with different businesses and I think it is advisable to arrive accurately at your own, then you are in a position to add on to your estimates the amount for expense and overhead that will be right for your own particular business.

We are only using one column in the

synoptic for all of our expense, but at the end of our financial year we require to know for comparison with other years how this is made up.

All we have to do to take a sheet of the synoptic and fill in the necessary headings for say

General expense.

Office expense.

Delivery expense.

Heat and light.

Advertising.

Proportion proprietor's salary not charged to jobs.

Interest on loans.

Insurance.

Rent.

Taxes, or any other information for special classification—and enter each item in expense column for year in its own column.

Instead therefore of posting the total of our expense column, we post each item as above to the private ledger.

Payroll

You now have to keep a payroll which will be open to Government inspection.

As journeymen are now usually paid by the hour, the ordinary weekly payroll book will be all right.

You will make up this from the men's time sheets.

Pay them by check. Or if you pay them by cash, put the amount through your counter check book and let them sign the book (counter check).

Tenders

When submitting a tender, no matter how small, have it down in black and white and save disputes, lawsuits and loss of customers. Every estimate you give should be written in full and in duplicate or triplicate, and when accepted by customer should be signed by him and a copy retained by him. You can buy cheaply enough stock tender forms, and only need to fill in the specifications and amount of estimate.

Estimates

It is advisable to make out your estimate on a regular stock form, or make it out on a sheet with two money columns. One of them head Estimate, and the other Actual Cost. If your estimate is accepted your private ledger account will show how you came out on the work. If the profit is less than it ought to have been, then you can check up item for item and discover where you fell down.

Filing

You will require several Shannon files and you ought to have a cabinet file with at least three drawers.

File your invoices on Shannon file until they are checked off. When checked off and entered in your synoptic file them away in your cabinet file. File in the second drawer from the top. Have a folder for each wholesaler. Do not file them loosely away in the folder, each invoice as you file it away should be pasted at the corner to the preceding

Details for Ventilator Damper

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri.

RESPONDING to an inquiry for dampers in large ventilator pipe, made of 14 gauge iron, the following suggestions in drawing may be of service. Not knowing the exact requirements of the job or duties of it, it is

rather hard to work out details, and so these suggestions may be taken to help work out something else, if need be.

For a large ventilator six feet in diameter it would no doubt be best to make the damper in two pieces, hinging it by

a tee bar in the center and operating it with pulleys. This will allow opening and closing and overcomes that angle of a damper made in one piece to stand obliquely.

THE BUDGET

NEW tax and tariff proposals outlined in the Budget speech of the Minister of Finance appear to be generally acceptable to plumbing and heating industry because of the fact that little or no disruption will be caused by the extension of the sales tax principle as now followed out by wholesalers and manufacturers only. One of the most interesting points to the trade is the final removal of tinsmiths from the category of "manufacturers." This action immediately following the hearing of the test case at Ottawa, and before the judge had a chance to render a decision, is somewhat significant of what the case might have been expected to prove, namely, that tinsmiths who make up articles on special order are not manufacturers in any sense of the word. The new regulations governing the basis of value for duty of imported articles will tend to give the Canadian manufacturer a little more protection, though not rendering this of such far-reaching importance as to discourage trade with other countries. Provisions are made to strengthen the anti-dumping law and after September 21 imported goods are to be marked with the country of origin. The latter step is to prevent articles being sold in this country as being of "British" origin, for instance, when they are the product of some other country. This unfair practice has been common in some lines recently.

One of the points in connection with the Budget on which there is some difference of opinion is the question of manufacturer and wholesaler showing the amount of the sales tax separately on the invoice. Under the new regulations this is not made necessary, as was formerly the case. In some trades wholesalers and manufacturers, realizing the value of following some definite line of action in this respect, have decided on a set plan of showing at least 1½ per cent. separately on each invoice. The difficulties consequent upon one wholesaler showing this separately and another absorbing it in the invoiced cost of the goods are quite obvious. Not only would the trade find it more difficult to make comparisons of quotations, but the wholesalers themselves would have difficulties keeping a record of the amount of tax collected and owed by them to the Government. This is one of the points which will no doubt have to be cleared up by those in each individual trade.

INSUFFICIENT SANITARY PROTECTION

IN connection with the plumber's dealings with his clients he will have many opportunities of emphasizing the serious consequences which follow upon the neglect of ordinary sanitary measures. At certain periods of the year circumstances render this neglect much more serious. In view of the forthcoming summer season, when many people shut up their city homes for the summer and in view of the fact that there are a certain number of people who have been away for the winter months who are now reopening their city homes, the occasion may be taken advantage of to point out the dangers of re-entering a house where insufficient sanitary protection has been afforded and which has had no ventilation for some months.

Many families having closed up their homes during periods of travel, detect on their return an offensive odor permeating the different apartments. The difficulty is simply this: the water which stands in the traps of house pipes and which shuts off gases from the sewer when fixtures are not receiving their customary supply, evaporates during the absences of occupants; and gases from the main sewer and house pipes are permitted to enter; and for weeks perhaps there has been no water seal in the traps, the ascent of sewer air has been continuous, so that not only the air is utterly unfit to live in, but curtains, carpets and other absorbing furnishings have been saturated with infections thus acquired. Let it be remembered that when lavatories, sinks and other fixtures are not in use they are gradually losing by evaporation the trapped water seal, and authorities have declared that sewer air is the most poisonous of all the gases of known composition; that it is heavier than the ordinary atmospheric air; that experiments have been made with it by chemical authorities, which show that this gas will kill animal life. This gas, therefore, must be removed so far away from us that it cannot return in the form of dangerous invisible gases of decomposition. It must then be obvious to any person that a thorough system of plumbing and house drainage is necessary in order that the building may be kept free from these insanitary conditions.

The remedy for these insanitary evils is readily found in continual scientific and practical effort on part of the people who dwell in cities, country towns and farm houses by calling to their aid the advice of the scientific master plumbers of the country, who in the past decades have almost eliminated from the homes of the people in this nation deleterious odors that arise in sewers to far greater extent than in any other country.

Under a catchy heading a Halifax firm states "Now is the time reserved for private plumbing. A little later most of our best men will be tied up handling new building contracts. Better take advantage of our free inspection now when we have time to give you a good job without rush."

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

Article No. 31 of the Series—Illustration No. 37

(Continued from last issue)

THE method of conveying the sewage from the different sanitary fixtures from the house is best accomplished by either cast iron or vitrified socketed pipes. These pipes must be constructed and laid with special care and attention, otherwise the sanitary system of the private house proves a failure.

The pipes need not be more than four inches in diameter but must be laid true to grade and line with the socket end directed towards the sewage flow as shown in Fig. 37A and not as shown in Fig. 37B. The fall should neither be too great or too little as both have their

rule-of-thumb method of multiplying the diameter by ten and that will give the fall the pipe should have. For example: take a 6 inch diameter pipe, 6 times 10 are 60, then a 6 inch pipe should be laid at a fall of 1 foot in 60 feet. If ample fall cannot be obtained through local circumstances, it is always advisable to install some artificial means of flushing, as it is imperative that the channel or pipe should be perfectly cleansed after each discharge.

Before laying, each pipe should be well inspected as defects frequently occur in process of manufacture which render many pipes unfit for use in

leak. If, through error, this does occur the replaced soil should be well wetted and tamped and made perfectly solid before the pipes are laid on same. It is always advisable to dig out collar holes under each joint in order that the jointer can make the bottom of the pipe as good as the top, otherwise the joints are badly made and leak, and then again if the earth is not removed under the sockets the whole weight of the pipe rests on the narrow bearing of the socket instead of on the body of the pipe at the bottom of the trench and when the trench is refilled and properly tamped the whole weight of the soil is concentrated at the socket or joint centres instead of being uniformly distributed along the entire length of the pipe, which is liable to cause the recently cemented joint to crack or settle.

Care should always be taken that the collar or socket holes are well packed after the joints are made and before the trench is refilled or the same trouble will occur through the weight of the soil on the collars.

FIG. 37. A.

B.

objections in small sewers. The flow or velocity should not exceed 6 feet per second or be less than 3 feet per second, a good self-cleansing velocity being from 4 to 4½ feet per second. If the velocity of grade is too great the liquid is apt to leave the solids behind and the grit or hard mineral matter, which usually finds access to all drains, has a tendency to wear the invert of the pipe in time.

A poor grade is far more disastrous than a quick one and it should be the aim of all constructing small installations to get the sewage at the disposal works as soon as possible, otherwise decomposition sets in and the foul gases are given off, creating a nuisance and sometimes a blockage in the drainage system.

The larger the diameter of the pipe or drain, the less the grade required to produce a good self-cleansing velocity and a quick and efficient way of determining the grade of a pipe is the old

first-class work. The pipes sometimes are not cylindrical, which prevents the spigot accurately fitting into the socket, the internal surface must be smooth and thoroughly well covered with glaze and the pipes are very liable to crack and blister and sometimes contain many flaws which prevent the pipes being thoroughly watertight. A good and simple way to test a pipe on the works is to stand a suspected imperfect pipe on its end, making same watertight, and cover the outside of the pipe with a soap solution, then fill the pipe with water and any leakage is easily detected on the soapy surface.

The trenches should be excavated, in lengths and not piece by piece, to the level and depth required for a true bone or grade and care should be taken that the floor or bottom of the trench is dug to the exact depth, otherwise same would have to be filled in and is always liable to settlement which would break the joints or pipes and allow the sewage to

SIMPLIFIED BOOKKEEPING FOR PLUMBERS

(Continued from page 20)

one in that folder. Paste is cheap and you will find that this method gives you a system of filing your invoices that is very handy. At the end of the year lift out the whole of the folder and without disturbing them at all place in the bottom drawer. You will thus be able to place your hand in a second on any firm's total invoices for the preceding year. You can take the firm's invoices out of the folder and they will be in the form of a book and not likely to be lost or scattered about. You will readily see that each of these bunches of invoices will agree with your ledger account with the firm, and in case of an audit there will be no difficulty in checking up.

The top drawer of your cabinet file should have three sets of folders:

The first one for general correspondence.

The second for copies of orders.

The third for copies of tenders.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

St. Johns, Que. — Marchessault & Frere, plumbers, have dissolved partnership.

NEW FIRMS.

Sturgeon Falls, Ont.—Depatie & Roche have commenced plumbing and tinsmithing business.

Reston, Man.—H. G. Coleman is commencing plumbing and tinsmithing business.

A newcomer in the tinsmith and plumbing field is O. J. Muntz, Dundas Street, Woodstock. Although in business three months he is being kept very busy. He has three men on tinsmithing and has work for four weeks ahead.

Mr. Muntz has been in this line of work here for eleven years.

PERSONAL

David K. Trotter, secretary of the Montreal Master Plumbers' Association, was in Ottawa last week attending the Builders' Conference under the chairmanship of the Minister of Labor.

MONCTON PLUMBERS AGAIN AT WORK

Moncton, N.B., union plumbers are again at work, having received an increase in wages.

PLUMBERS ON BORDER STRIKE

Windsor, Ont.—Plumbers of the Border Cities have laid down their tools in protest against a wage reduction of from \$1.06¼ to 95 cents an hour.

HAVE MOVED OFFICES

The Port Hope Sanitary Manufacturing Company, Ltd., have moved their Montreal sales office from 234 Beaver Hall Hill to the Southam Building, at 128 Bleury St., Montreal.

PLUMBERS' DISPLAY WINS PRIZE

Toronto.—Lillie Plumbing Co., Roncesvalles Avenue, won second prize for display of equipment in a contest among all merchants in connection with a recent event staged by district business men.

AMEND CHATHAM WATER BY-LAW

Chatham.—The waterworks by-law will be changed at the next meeting of the Water Board to permit the laying of water mains under the Local Improvement Act. The question of putting in extensions to water mains has been under discussion for some time, and ac-

tion was taken as a result of a communication from Kitchener, where the plan has already been adopted.

WESTERN ONTARIO NEWS

Alex. Ross, 32 Railway Street, St. Thomas, Ont., wants prices on hot air heating, plumbing and electrical work for two new residences to cost \$7,000.

R. Kitchen, 19 Hemlock Street, St. Thomas, Ont., has commenced excavating for a \$3,500 residence and wants prices on heating, plumbing and electrical work.

T. Trotter, 470 Egerton St., London, Ont., will start work immediately on new residence to cost \$3,500 and wants prices on hot air heating, plumbing and electrical work.

The town council at Leamington, Ont., has awarded contracts for new sewers on Robinson St., Victoria Ave. and Orange St. to F. Smithson.

Reeve Allan McPherson, of Glencoe, Ont., is preparing plans for new \$6,000 residence and wants prices on heating, plumbing and electrical equipment.

Plans are being prepared by Engineer R. W. Code, of Windsor, Ont., for new sewers at Kingsville to cost \$52,000 and tenders will be called for the work about June 1.

The ratepayers of Sarnia, Ont., are to vote on June 6 on a by-law to provide \$95,000 for extensions and improvements to the waterworks system.

Crane Limited, who recently purchased property at London, Ont., for a new warehouse for Western Ontario, plan to commence building operations early in June.

Williams and Roberts, Tecumseh Ave., London, Ont., were awarded contract for plumbing and heating for new residence for L. Smart.

The Mason & Risch Piano Co., Chatham, Ont., plan installation of a new steam heating system. Truman Dillon, manager, wants prices.

Eggett & Co., London, have contract for plumbing and heating for a new residence being erected by T. R. Wright.

Alex. Sutherland, 35 Clark St., has been awarded the heating and James Haslett the plumbing for new \$8,000 residence at London, Ont., for Lee Walden.

TENDERS WANTED

Montreal.—Tenders will be received for six residences, also prices on plumbing and temporary heating for G. Clermont, 303 St. Denis St. General contract for the project, twenty-six residences costing \$130,000, is placed with Brunet & Vezina, 601 Mount Royal Ave. East.

Tenders will be received until May 17 by W. A. Tanner, secretary of the board of education, at London, Ont., for steam heating system, plumbing, ventilating system and electrical work in connection with new fourteen room school to cost \$160,000.

The Wright Teale Co., London, Ont., have been awarded contract for heating and plumbing for new \$5,000 residence for Thomas E. Walsh.

The Jackson Manufacturing Co., Durham, Ont., are preparing plans for two-story addition to factory and want prices on heating equipment.

Charles George, Glencoe, Ont., will receive tenders until June 1 for installing hot air heating system in the town hall.

Thomas Jenner, of Harrow, Ont., is preparing plans for six room addition to the public school at Kingsville, Ont., and for remodelling large residence to be rebuilt into high school. Estimated cost \$60,000. Tenders will be called early in June and prices are wanted on heating, plumbing and electrical equipment.

Ingram & Davey, of St. Thomas, Ont., hardware and plumbing, expect to commence work in a few weeks on extensive alterations and additions to their premises.

Gideon Litt, Mitchell, Ont., wants prices on heating, plumbing and electrical work for three new residences which will be erected at a cost of \$12,000.

W. Leaming, Corunna, Ont., is preparing plans for new summer hotel to cost \$25,000 and is interested immediately in prices of bathroom equipment and general plumbing.

Willard Ingram, Mitchell, Ont., will commence work shortly on three new residences to cost \$15,000 and wants prices on heating, plumbing and electrical work.

* * *

Work will be commenced in a couple of weeks on a new \$5,000 manse at Paisley, Ont., for the Presbyterian congregation, Rev. H. D. McCuaig, pastor. Prices wanted on hot air heating, plumbing and electrical work.

* * *

George Sutherland, Mount Brydges, Ont., wants prices on heating and plumbing for new \$4,500 bungalow.

* * *

Albert Doyle, 1073 York St., London, Ont., has been awarded the plumbing and heating contracts in connection with new \$15,000 meeting hall for the Salvation Army.

* * *

J. C. McNiven, Dorchester, Ont., wants prices on heating and plumbing for new \$4,000 residence on which work is just starting.

* * *

J. P. Pearce, 201 Cheapside St., London, Ont., is preparing plans for new residence to cost \$9,000. Prices wanted on hot water heating, plumbing and electrical work.

* * *

Hamilton & Stott, of St. Thomas, Ont., have contract for steam heating for new Presbyterian church at Dutton, Ont.

* * *

John Eggett, of the plumbing firm of Eggett & Co., London, Ont., is preparing plans for a new residence to be erected this summer.

MONTREAL PLUMBERS TO ATTEND QUEBEC CONVENTION IN MONTREAL

Montreal.—At the regular monthly meeting of the Montreal Master Plumbers' Association, the following members were officially nominated to represent the Montreal Branch. This enables them to vote as representatives of Montreal: D. A. Bethune, T. Latourelle, A. Charrette, H. Lavigeour, John Watson, James Buchan, J. E. Walsh, P. C. Ogilvie, W. G. Borland, R. R. McCauley, Walter Ryan, James Griffin and John A. Gordon.

GODERICH MUST IMPROVE ITS WATER SUPPLY

Goderich, Ont.—The town clerk, L. L. Knox, has received an order from the Provincial Board of Health requiring the town council and carry out certain improvements in the water supply. The immediate installation of a water filter plant and also the installation in connection with the water works filtration plant of a chlorinating apparatus for the further protection of the water supply, same to be arranged for the administration of liquid chlorine.

W. H. Cunningham & Co. Enlarge Business

Incorporation Secured Under Name of W. H. Cunningham and Hill, Ltd.—T. H. McLaren, Formerly With the Galt Brass Co., Joins New Firm

THE firm of W. H. Cunningham & Co., Toronto, will in future be known as W. H. Cunningham & Hill, Limited. This company was established five years ago by W. H. Cunningham,

W. H. CUNNINGHAM, President

ham, who was formerly for sixteen years with the James Robertson Co., Toronto, and the Ideal Manufacturing Co., of Detroit. Three years ago W. F. Hill was taken into partnership. Mr. Hill for many years was Canadian representative

for the Good Manufacturing Co., of New York. One of the directors of the new organization is T. H. McLaren, known in the trade as "Bert" McLaren, who was for many years with the Galt Brass Co., Galt, Ont. Mr. McLaren is to have full charge of the valve department. Harry Baxter who, prior to going overseas, was with the James Roberston Co. and who recently has held an important office position with Crane Ltd., Toronto, will have charge of the accounting of the new firm.

The old firm has been for some time dealing in several plumbing specialties;

W. F. HILL,

for many years Canadian representative for the Good Mfg. Co., New York, and since 1918 in partnership with W. H. Cunningham, Toronto. Mr. Hill is a member of the incorporated firm which has just been formed under the name of W. H. Cunningham & Hill, Ltd.

they now are going into the specialty lines extensively and will carry well assorted stocks of all plumbers' specialties, such as rubber goods, etc. The specialty business will be under direct supervision of Mr. Hill.

They are also carrying large stocks of "Ubel" semi-rotating pumps and advise us that within a short time they will have a complete stock of other "Ubel" products, such as brass valves, stop cocks, etc.

Until August, 1920, the business of W. H. Cunningham & Co. was carried on at 183 Church Street, Toronto. Larger quarters were subsequently secured at 269 Richmond Street West, where plenty of floor space is provided for expansion.

T. H. McLAREN,

known among the trade as "Bert" and formerly with the Galt Brass Co., Ltd., Galt, Ont., who has joined the firm of W. H. Cunningham & Hill, Ltd., Toronto.

TO MANUFACTURE SANITARY MOIST AIR FURNACES

Ottawa, Ont.—Beeby & Aikins, Ltd., Jackson Bldg., Bank Street, were recently incorporated with an authorized capital of \$500,000. They intend to put a new line of stoves upon the market featuring the new patented Beeby "Unity" burner for gas. They will also manufacture a line of sanitary moist air furnaces and hope to begin operations in the old Marine Signal Building early in July. As a beginning some sixty men will be on the payroll, but the firm have high hopes that before long a total far in excess of that number will be necessary to make the number of stoves and furnaces required to fill orders.

NEW SCARBORO OFFICIAL COM- MENCES HIS WORK

W. J. Hamilton, recently appointed superintendent of Scarboro township water system, has commenced work. The work on the new waterworks system in the Birch Cliff section is proceeding rapidly. The public utilities commission s doing its best to locate offices for the water works department, but as yet has been unsuccessful.

MUNICIPAL STEAM HEATING

North Battleford.—North Battleford believes it has worked out a scheme for municipal steam heating that will work. Steam heat from its electric power house is offered for sale as a commodity at a reasonable rate.

Steam is a "by-product" of such electric power plants as we have in this country. The elements in our electric power are coal and water, the latter turned into steam by combustion of the coal and driving the engines which develop electric power. After the steam has so been used, to the fullest extent, it is allowed to escape.

North Battleford finds that it can, and is turning this by-product, formerly allowed to escape, into a source of profit which must go to reduce the cost of power there. It is advantageous in many ways. There is complete absence of dust and dirt, the expense and the wastefulness of individual heating plants is eliminated, the heat is uniform, and

there is reduction of fire hazard. In contrast with the plan of heating by electricity, which adds to the load upon the power plant at the very season when it is normally heaviest, the steam heating system requires and uses most steam at the time when the electric power load is at the peak and most steam is available.

BUREAU OF HEALTH DESCRIBES WAYS TO DISPOSE OF SEWAGE

With a large number of farmers modernizing their homes by the installation of sewage disposal systems, the Saskatchewan bureau of health has received a number of inquiries as to the regulations governing the treatment of sewage on farm homes. To meet this need for information a bulletin has been prepared and is just issued by the bureau.

The bulletin deals with the question in a very comprehensive manner and contains a number of diagrams illustrating the construction of various systems suitable for differing conditions, together with instructions concerning their installation and hints on successful operation.

During the past year systems of sewage disposal in actual use at 72 farms in different parts of the province have been investigated by officials of the bureau, and the conclusions arrived at following this investigation are incorporated in the pamphlet.

"Experience has shown," said Dr. Seymour, commissioner of public health of Saskatchewan, "that a system of sewage disposal which could be left to run itself on a farm in the eastern provinces will not prove so accommodating if installed in Saskatchewan where the subsoil is for the greater part a still, non-absorbent clay, where creeks or water-courses are almost unknown and where the frost can be relied upon to penetrate six feet into the ground each winter."

NEW PUMPS AT WATERWORKS

Montreal.—Two new 30,000,000 gallon electrical pumps have been installed at the low level pumping station of the Montreal waterworks. With these added to the electric unit that has been in operation for the past two years, 75,000,000 gallons will be delivered daily. It may be necessary to use some of the steam units, but the majority of the steam pumps will be held in reserve, and used only in case of emergency. At present the filtration plant has a capacity of about 50,000,000 gallons per day, and when new additions are installed, at a cost of about \$2,000,000, it is expected that about 120,000,000 gallons will pass through the beds daily.

TIMMINS SEWAGE DISPOSAL

Timmins, Ont.—J. F. Henderson, town engineer, will visit a number of centres, including Brampton and Woodstock, to inspect the sewage disposal plants there, in connection with the installation of a similar system in this town.

NEW PLUMBING GOODS

"SPECO" FOR SOLDERING

The Special Chemicals Co., Highland Park, Ill., are manufacturing and are shortly placing on the Canadian market a new form of sal ammoniac for cleaning and tinning soldering irons, called "Speco." It is said to be the only completely fused form of sal ammoniac. The makers claim that it is supplanting the crystalline form of lump sal ammoniac with its dirt, waste and inconvenience. In Speco the crystals are

"Speco" for Soldering

made into a solid block without binder or undesirable foreign substance, it is stated, and one pound of Speco is said to go as far as five times as much lump sal ammoniac.

It is put up in $\frac{1}{2}$ and 1-pound cakes in individual cartons and is claimed to be unaffected by atmospheric conditions, to keep indefinitely, is odorless and can be carried without danger of rusting tools.

POST DRILL CHUCK

A new post drill chuck has been put on the market by the manufacturers, E. C. Stearns & Co., Syracuse, N. Y.

This chuck (styled No. 1) has a regu-

No. 1 Post Drill Chuck

lar $\frac{1}{2}$ inch straight shank to fit blacksmith's post drills. A square milled socket takes regular bit shank twist drills, which are kept from falling out by a friction spring.

INVENTS REFRIGERATOR MACHINE

An invention of an artificial refrigeration system which is said to have been pronounced by experts to be of great value, has been perfected by a young Toronto engineer, Forbes Keith, of Keith's, Limited. Mr. Keith is said to have received very attractive offers for the American rights from two big United States corporations.

The new machine uses what is known technically as the "absorption" principle and its action consists in the alternate evaporation and condensation of ammonia gas. The gas given off through the evaporation is absorbed in a tank of water. When all is evaporated a tilting of the machine through the action of gravity closes an electric switch controlling an electric heater in the tank of water, the heat from which drives the gas out of the water back to the evaporation chamber, where it condenses into liquid, the machine tilts automatically back to its original position and the process starts over again.

With weather of 80 to 90 degrees, the inventor claims that his machine will maintain temperatures in the refrigerator ranging from 38 to 46 degrees.

BIG BUSINESS IN PIPELESS FURNACES

Big business in pipeless furnaces is reported by L. H. Eckardt, plumber, of Ingersoll.

METAL WORKERS OPEN CONVENTION

Hamilton, Ont.—The Amalgamated Iron, Steel and Tin Workers of America have opened their forty-sixth convention. This is the first time it has been held in Canada. About 175 delegates from various parts of Canada and the United States were present, and the session was featured by addresses by Mayor Copley; W. R. Dryman, president of the Chamber of Commerce; Hon. W. R. Rollo, Minister of Labor in the Ontario Cabinet, and G. Fester, representing the Trades and Labor Council.

ANNUAL MEETING OF MARITIME BRANCH C. M. A.

The annual meeting of the Maritime Division of the Canadian Manufacturers' Association was held in St. John, N.B., for one day, concluding with a complimentary dinner tendered J. E. Walsh, manager of the C.M.A., by the Maritime members. W. S. Fisher was nominated for election to the presidency of the C. M.A. the annual general meeting to be held in Quebec on June 7, 8, and 9. L. W. Simms, T. S. Simms Co., Ltd., St. John, was elected chairman; vice-chairmen include: C. S. Sutherland, J. A. Marven, J. E. McLurg; secretary, H. R. Thompson. Mayor Schofield, of St. John, president of the Schofield Paper Co., selling agents for the E. B. Eddy Co., Ltd., was a speaker. Mr. Walsh traced the development of the organization which will celebrate its fiftieth anniversary at the forthcoming general meeting, with a membership of 4,200.

DETAILS FOR VENTILATION

(Continued from page 21)

The tee bar can be made similar as at A with part of the lower web cut so the other part can be bent up in riveting to the pipe as shown in the sectional side view.

If there should be a tendency to sag, angle iron braces as at B can easily be added. The end view and plan give additional views of the damper and its operation by means of the pulley bracket E which acts as a stop for the damper, and for attaching the pulley.

If necessary a counterbalance weight can be easily arranged for. To prevent the damper from twisting an angle iron F can be stretched to the curve of the pipe and riveted on as shown in plan. Other tradesmen may have other ideas on this subject, but it all hinges on the question of working satisfactorily.

For a square or rectangular damper 7 by 8 feet a similar treatment can be followed by making the damper in two pieces. If desired two extra pivots can be used in place of one pivot as in a full damper.

This would be nothing more than two dampers on a pivot in the one pipe, and set so they will close and still not interfere. At times, a lifting bar, as at N, is found satisfactory. But for a heavy damper, this would be rather hard in raising and lowering unless a double block and tackle arrangement is used. The lifting bar N is made of angle iron with a curve bent on the end. This prevents the bar from sticking as it lowers. A hinge is riveted to the top and to the damper.

The damper ordinarily would be encircled with angle iron reinforcement. But this makes a rather heavy job for raising and lowering, but still it must be reinforced to prevent the metal from sagging.

CATALOGUES AND BOOKLETS.

BLOW TORCHES

A folder issued by Joseph Breeden & Co., Ltd., Birmingham, England, illustrates and describes the gasoline blow torch made by this firm. Simplicity is the key note claimed for this torch, and it is stated to give a powerful and efficient flame that will stand high wind pressure. No wind screen is used. The folder shows all the replacement parts which can be supplied separately. The Canadian agents are W. H. Cunningham & Co., 269 West Richmond St., Toronto, Ont., from whom booklet and particulars can be obtained.

A. B. JARDINE & CO., LTD.

A new catalog and discount sheet has been issued by A. B. Jardine & Co., Ltd., Hespeler, Ont., manufacturers of blacksmiths' and machinists' and boiler makers' tools and machinery. New lines have been added since the previous catalog was issued and included in these are automobile sets of taps and dies, grinders, and disc sharpeners. Particular attention is called to the alteration or change in threads and all sets of taps and dies as well as separate dies and separate taps are now supplied in U.S. standard thread unless otherwise ordered. A copy of catalog and list will be sent on request.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

A DOWNWARD trend is evident on prices of many plumbing and steamfitting supplies. Chief among the declines noted are new quotations on corrugated sheets, conductor pipe and eavestrough. Lapweld boiler tubes and standard compression work are also reduced.

Some price cutting is indicated in certain districts on range boilers, but a revision in quotations is expected shortly. A firmer tone in lead is evident but no changes are reported on the primary lead and zinc products. Pipe fittings remain steady

and wrought pipe is also quiet. Sheets and plates still hold at previous levels, but bar iron and steel show an unsettled state, with a slight tendency to reduce.

Soil pipe and cotton waste are unchanged in price. Some revision in waste material quotations have been noted, but the market continues dull. Lead features the ingot metal situation, with a firmer tone. Business is reported to be improving; collections are fair and wholesalers are generally adopting a more optimistic outlook.

MONTREAL MARKETS

MONTREAL, May 13.—Price tendencies on many lines of plumbing supplies are downward, chief among them being a drastic cut on range boilers. The 30-gallon standard boiler is now quoted in some quarters at \$8.75. A new price list is expected in the next few days with a readjustment on present quotations as they are considered much below value and are the result of recent price cutting. Eavestrough, conductor pipe and corrugated sheets also feature lines of galvanized sheet manufacture. Eavestrough, etc., has new lower discounts, while corrugated sheets are now selling under a new list with a reduction made. Enamelled ware continues unsettled and an extra 10 per cent. is given on practically all lines. Standard compression goods also show a reduction and are quoted at 37 per cent. off. Lapweld boiler tubes have been revised and lower prices are obtainable. Pipe, pipe fittings, bar iron and steel, sheets, soil pipe, and cotton waste are unchanged, while lead products are very firm. Lead also features the ingot markets.

Range Boiler Prices Withdraw

Montreal.

A price list on the different sizes and weights of range boilers is not obtainable at time of going to press, but it is understood that a drastic cut has been made in quotations, with the 30 gallon standard boiler quoted by some dealers at \$8.75. This price is considered much below the value, and a readjustment is expected in the next few days. Undoubtedly the recent unsettled market on boilers, especially on this size which is the big seller, has resulted in the extremely low levels now reached. The new list will in all probability be given out within the next week.

Sheet Quotations Unchanged

Montreal.

Prices on all sheets remain unchanged, and little improvement in business is noted. The United States mills still report very little new business from the recent adjustment in prices. The new tariff changes burden the importer with approximately an extra 5 per cent., but

this will have little effect on present prices other than causing the chances of further declines to be more remote. A steady market is looked for with the following quotations ruling:

24 gauge	8 15	8 60
22 gauge	8 80	8 15
18 and 20 gauge	8 10	8 00

NOTE.—These prices are full bundles, an extra charge of 25c to 35c per 100 lbs. is made for broken lots. These quotations are nominal.

Soil Pipe Unchanged

Montreal.

No change has been made in the discounts on soil pipe or fittings, the following prices ruling:

SOIL PIPE (medium and extra heavy)—

2, 3, 15%; 5 and 6-inch, 20% discount.
4-inch, 25% discount.
8 inch, add 20% to list.

FITTINGS—

2 to 6 inch fittings, 40 per cent. discount.
8-inch, net.

Pipe Held at New List

Montreal.

No further change has been made in wrought iron and steel pipe since list No. 51 came into effect. Stocks are now in good shape throughout the different warehouses, and sales are said to be irregular with little improvement shown. Following is the selling basis:

Price List No. 51. April 25th, 1921.

No Change in Oakum

Montreal.

Quotations on plumbers' oakum re-

main unchanged this week at \$3.75 per 50 pound bale, and 10 cents per pound for less quantities.

Radiation and Boilers

Montreal.

Lists and discounts are holding on both radiators and boilers, with little change noted in sales. Hot water is quoted at 48 per cent. off list, steam 49 off, wall radiators 45 off. Boilers are quoted according to shape and fittings. Any advance in sales will depend largely on building construction in the following summer months, and at this time dealers would prefer to see a much stronger tone develop. Quotations are as follows:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
45 in. to 38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60. Discount. 48% for hot water and 49% for steam.

Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 45%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 55% off list.

Square or sectional hot water or steam boilers, 15-in., 5%.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in. to 36-in., 5% off list.

Square or sectional steam boilers, 19-in. to 36-in., 5%. Ontario Government trimmings, net list.

Round steam boilers, standard trimmings, 15 per cent. off. Ontario Government trimmings, 10%.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

Waste Prices Hold

Montreal.

Cotton waste remains unchanged in price on all lines, with the demand slowly improving. Following are quotations: Cream, Polishing 0 22

Wares Unsettled: Lower Price

Montreal.

Very little improvement in the situation on enamelled ware is reported, and one wholesaler states they are selling on an open market. However, the general quotations are 10 per cent. off prices quoted below. It is evident that price cutting still exists among the wholesalers. Whether extra business is being obtained through these cuts seems doubtful, as buying continues light. A new price list may be obtainable in the near future, depending of course on a settlement being made. Following are the old net prices less 10 per cent.:

Sinks, roll rim, 18x30 in.	18 40
Sinks, flat rim—	1 only 2 only 3 only
16 x 24	\$6 00 \$5 92 \$5 84
18 x 30	6 96 6 88 6 80
20 x 30	7 92 7 84 7 76

17x19" Roll Rim, F241 or P4345	10 08
Less 10%.	

Closets Also Easier

Montreal.

Although the discount of 10 per cent. is not shown on closets, the condition on these is much the same as on enamelled ware, with lower prices given by the different jobbers. Following are quotations:

Closet, standard outfit	32 00
Do., with post hinge seat	33 00
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	17 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover	4 75
Do., add for bar hinge	0 25
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies, less seat	19 00

Boiler Tubes Revised

Montreal.

A revision is made on practically all sizes of the lapweld boiler tubes, lower quotations resulting. The reduction is variable, the best selling tubes suffering less than others. This is done in an effort to move the slow sellers, as repair work seems to be the only factor causing a movement in these. Following are the revised prices:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00	25 00
1¼ inch	27 25	26 00
1½ inch	26 25	27 00
1¾ inch	29 75	27 00
2 inch	29 25	22 90
2¼ inch	33 00	26 00
2½ inch	44 75	28 00
3 inch	49 25	35 00
3½ inch	63 50	40 75
4 inch	85 00	51 75

New Discounts on Eavestrough

Montreal.

Eavestrough, conductor pipe and conductor pipe elbows have been reduced approximately 5 per cent. through a change in discounts. Troughing and conductor pipe is now quoted at 60 off list, elbows 55 off. The former discounts were 50/10 and 50 respectively. These lines are now selling well, with stocks in good shape to meet the increased demand. The list with new discounts is as follows:

EAVETROUGH—			
O.G. Square Bead—			
	Per 100 ft.		Per 100 ft.
8 in.	15 90	15 inch	28 80
10 in.	17 70	18 inch	36 80

4 in.	29 60
5 in.	40 00
6 in.	49 00
Discount 60% off list.	
CONDUCTOR ELBOWS—	
Plain round or round corrugated—	
2 inch	5 25
3 inch	6 00
4 inch	10 50
5 inch	24 00
6 inch	29 00
Discount 55%.	

Iron and Steel Bars Slow

Montreal.

Iron and steel bars are held unchanged, and buying continues light. It is stated that some lines of steel products can be laid down 50 cents a ton cheaper from Belgium than from the United States mills, considering the present rate of exchange. Local stocks are ample, with little change looked for at present. Following are quotations:

Common bar iron, 100 lbs.	3 70
Refined iron	5 20
Iron finish machinery steel	3 75
Mild steel	3 70
Single reeled machinery steel	5 75
Band steel	3 70
Spring steel	5 00
Sleighshoe steel	3 70
Tire steel	3 90
Toe calk steel	4 60
Harrow tooth steel	3 85
Mining tooth steel, per lb.	0 23
Black Diamond tool and cast steel, per lb.	0 23

NOTE.—Refined iron is approximately \$1.50 per 100 pounds over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

Flats, iron and steel, 3-16 and thinner, 50c per 100 lbs. extra.

Compression Goods Lower

Montreal.

Standard compression work, also standard flat and round way stop and wastes, are now quoted at 37 per cent. off list; the former discount being 34 per cent. Other lines of brass bibbs, valves and cocks are holding unchanged, although an unsettled feeling still exists and lower prices are not improbable on many other lines. Following are quotations:

Compression work, standard	37%
Fuller work, standard	30%
Bath cocks, compression	25%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard	37%
Roundway stop and waste cocks, standard	37%
Brass steam cocks, standard	10%
Radiator valves, standard	23%
Do., removable disc	38%

Globe, angle and check valves, standard	5%
Gate or straightway	Net
Jenkins globe	10%
Jenkins gate valves	10%

New List on Corrugated

Montreal.

Corrugated sheets are now selling under a new list, showing reductions on all gauges. The best selling weight, 28 gauge, was formerly \$9.50, and is now listed at \$8.50 with the same discount. Heavier gauges show a bigger reduction. Following is the new price list:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	8 50
No. 26 gauge	9 25
No. 24 gauge	15 00
No. 22 gauge	16 00
No. 20 gauge	18 00
No. 18 gauge	24 00
Less 1½%.	
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.	

Waste Materials Listless

Montreal.

Little actual business is being done in scrap metals, although recent inquiries coming to hand have offered some encouragement. All metals are more or less listless, with no actual changes with the exception of lead. This metal is slightly higher, no doubt following the exception of lead, which is at present very strong on the primary markets. Quotations are as follows:

Dealer's Buying Prices.	
Automobile tires	0 75
Yellow brass	0 05
Red brass	0.08½
Light brass	0 04
Scrap zinc	0 04
Lead, heavy	0 04
Lead, tea	0 02
Light copper	0 07¾
Heavy copper	0 10½
Wrought iron, R. Rd., No. 1 per gr. ton	12 00
Malleable scrap (ton)	11 50

Heavy melting steel	8 50
No. 2 busheling,	4 00
Boiler plate	0 08
Boiler plate	0 10
No. 1 machinery cast	24 00

Lead Products Firm

Montreal.

No price changes are made on the different lead products this week, but the market is very firm and higher prices on most lines would not be surprising in the near future. Pig lead in the primary markets continues to show strength, with a substantial advance made this week. Present prices are as follows:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	40% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 11
Lead sheets, 3 to 3½ lbs, sq. ft., lb	0 10¾
Do., 4 to 8 lbs., sq. ft.	0 10
Cut sheets ¼ lb. extra and cut sheets to size, ¾ lb. extra.	
Solder, guaranteed, lb.	0 27
Do., strictly, lb.	0 25
Do., commercial, lb.	0 22
Do., wiping, lb.	0 22¾
Do., wire, lb.	0 35
Zinc, sheets, casks	0 13
Do., broken lots	0 13½

Pipe Fittings Hold

Montreal.

No change has been made in quotations on the different lines of pipe fittings since the decline of a few weeks ago. Sales are rather irregular, one week showing a fairly heavy demand, while the week following sales are reported small. Stocks are in good shape in all sizes. Quotations are the following:

Cast iron fittings	20%
Bushings, cast	30%
Do., malleable	30%
Flanges	27%
Plugs	22½%
Flange Unions	20%
Maleable Unions	40%
Dart Unions, black	29%
Do., galvanized	8%

Do., long	50%
Do., 4½ to 8" close and short.	30%
Do., long	40%
Couplings, 4" and under	20%
Do., 4½" and larger	Net list
Pound Goods—	Blk. Galv.
Class B	0 20 0 28
Class C	0 13 0 20
Add 10%.	

Lead Features Ingots

Montreal.

The chief feature of the ingot metal markets this week is the further advance in lead, which continues strong with indications of going higher. There is not much change in the other metals, the list generally remaining firm.

TIN.—The market on tin in London is somewhat irregular, but holds very well considering the continued strike. It is felt that when this is settled there should be an upward movement. The market here is firm with no change in quotations at 40 cents.

COPPER.—Copper is slightly firmer both in London and New York, standard having touched the same level as electro in London. While the market is steady no immediate advance is looked for. Electro is quoted at 18 cents, casting at 17½ cents.

SPELTER.—This metal seems to be marking time for the present, with

prices practically unchanged both in London and East St. Louis. Until the situation with regard to German spelter is a little clearer, there will not likely be much change. Local price unchanged at 8½ cents.

LEAD.—Lead has been very firm both in London and the U. S. A.; the trust price was again advanced 5 cents, East St. Louis, this being one per cent per pound above the low point. London has also touched the highest point since early in the year and the situation appears very strong at present. There is no scarcity of lead in this country, and the market has advanced in line with foreign prices, now quoted at 7¼ cents.

ANTIMONY.—Antimony is slightly more active with little change in prices. Chinese is quoted at 7¼ cents, high grade English 8½ cents.

ALUMINUM. — This metal remains dull on the market, with no change in price, quotations being 34 cents.

TORONTO MARKETS

TORONTO, May 13.—Reductions are the outstanding feature of the markets, but the changes are generally not large and are chiefly confined to revisions in discounts. Prominent among the declines are the lower prices on corrugated sheets and standard compression work.

Lower quotations are also announced on eavestrough, conductor pipe and conductor elbows, and also in lapweld boiler tubes. A firmer tone in lead is evident, with no change in the prices of the primary lead or zinc products.

Wrought pipe is quiet following the reductions recently announced in list No. 51, and no change is shown in sheets or plates. Bar steel remains unsettled, while improved sales in range boilers are reported and some revision in quotations is expected shortly. Pipe fittings remain steady, and there have been some price changes noted in waste materials, but these are still very dull. Ingot metals are generally at previous levels, with lead slightly more active.

Enamelled Ware Steady

Toronto.

The reductions recently made in enamelled ware lists have resulted in a slightly better demand. But sales are generally below expectations, and much lower than this time last season. Some improvement is anticipated, however, should any marked building activity become apparent within the next few months. Following are the present lists.

Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
All Steel Enamel Baths, 4, 4½ or 5 ft., net	\$16 25

All above list except lines marked net.	
Discount 20/10% off these prices.	

Oil and Turps Higher

Toronto.

Activity is apparent in white lead in oil, but no change has been reported in quotations. Red and dry lead show no change; but turpentine and linseed oil have both advanced. Turpentine is especially active, now being quoted at \$1.15 per imperial gallon on one barrel lots. Linseed oil shows an unsettled state, the price now having reached 85 for raw, and 88 cents per gallon for boiled on one to two barrel lots.

Closet Prices Unchanged

Toronto.

Very little new business is reported in closet fixtures, and no changes in prices have been announced. Nominal quotations remain as follows:

Closet, standard outfit	\$32 00
Do., with post hinge seat	33 00
Do., white vitro, vitreous china or enamel-iron, with wash-down bowl and oak or mahogany post hinge seat	35 00
Do., add for reversible trap bowl	1 25
Do., add for siphon jet bowl.	7 00

Do., for 3/4 in. valve on supply pipe.....	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	11 50
Do., reversible trap bowl, less spud.....	12 75
Do., siphon jet bowl, less spud.....	19 00
Do., "Richelieu" bowl	10 50
Do., extra for spud	0 80
Do., oak, or oak-vitro tank, with fittings, less seat	16 50
Do., white vitro, vitreous china, or enam- eled iron tank, with fittings, flush elbow and supplies	18 50
Do., wood strip seat and cover	3 75
Do., post hinge seat and cover.....	4 75
Do., add for bar hinge	0 40

Radiators Unchanged

Toronto.
The demand for radiators remains practically unchanged, and the active promotion of new building is needed to stimulate sales. No changes in lists or discounts are reported—48 per cent. for hot water and 49 for steam are still current quotations, with 45 per cent. off wall list. Prices are as follows:

Revised radiator list prices are for 1, 2, 3, 4, and 5-column radiators per square foot.
38 in., \$1; 32 in., \$1.10; 30 in., \$1.15; 26 in., \$1.20; 23 in., \$1.26; 22 in., \$1.30; 20 in., \$1.36; 18 in., \$1.40; 16 in., \$1.50; 14 in., \$1.55; 13 in., \$1.60.
Discount 48% for hot water and 49% for steam.
Wall Radiators—5 ft., \$1.15; 6 ft., \$1.10; 7 ft., \$1.05; 9 ft., \$1.05; 12 ft., \$1.05. Discount 45%.

Cotton Waste Steady

Toronto.
Cotton waste remains unchanged this week, with just a slight increase in the demand. Present quotations follow:

Above lines subject to trade discount for quantity.	

Asbestos Products Firm

Toronto.
A little better movement in asbestos products has been reported; but the asbestos situation is practically staple, with no prospect of any immediate reductions. Dealers generally are now developing a more optimistic tone.

Cutting Evident in Boiler Price

Toronto.
General unsettlement in prices on range boilers is evident on local markets. Reports indicate some cutting in various quarters, with quotations much below previous figures. The 30 gallon standard boiler was reduced last week to \$12, but some dealers are now reported to be quoting as low as \$9. This is stated to be below normal value, and a revision in quotations is expected to be announced shortly. The current list has been withdrawn.

Bar Steel Unsettled

Toronto.
Even the recent wage reduction announced by the United States Steel Corporation has not stimulated any marked activity among local buying centres in bar iron and steel; and it is considered problematical whether this result will immediately be apparent, as some little time must elapse before price adjustments can be made effective. In some few cases dealers have been inclined to quote lower prices on a few grades, and a range is shown. Reductions are stated to be in effect in some quarters, but anticipated price changes of this nature are not generally in order. The labor and political situation in Britain has had the effect of further unsettling the metal markets, and some purchasers are inclined to hold off in the expectation of a corresponding drop in the scale of quotations. Following are the average prices at present:

IRON AND STEEL	
Common bar steel, 3-16 in. and lighter ...	\$ 4 50
Do., 1/4 in. and heavier	5 75
Common bar iron, 3-16 in. and lighter ...	4 50

Norway iron	15 00
Toe caulk iron	5 40 6 70
Hoop steel	6 00

Corrugated Sheets Lower

Toronto.
Reductions of a fairly substantial nature are evident in the prices of corrugated sheets. Business is still reported as showing a gradual tendency toward seasonable improvement, and the brighter vein is expected to continue. The new quotations are as follows:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	8 50
No. 26 gauge	9 25

No. 18 gauge	24 00
Less 7 1/2%.	

Lapweld Tubes Reduced

Toronto.
Some slight reductions on lapweld boiler tubes are announced this week; the changes being variable on sizes from 1 3/4-inch to 4-inch. Prices on seamless tubes remain unchanged. Following are the revised quotations:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00
1 1/4 inch	27 25
1 1/2 inch	26 25
1 3/4 inch	29 75	25 00

Brass Goods Reduced

Toronto.
The expected readjustments and reductions in some lines of compression work have been made. These changes consist of increases in the discounts on current list, and affect standard compression work, compression bath cocks and

some lines of valves and basin cocks. Signs that business is inclined to open up a little have not been wanting, and it is expected that these reductions will help in stimulating activity among brass goods. The new quotations are given as follows:

Compression work, standard	37%
Fuller work, standard	30%
Bath cocks, compression	29%
Do., Fuller	25%
Flatway stop and waste cocks, standard	40%
Roundaway stop and waste cocks, stand.	34%
Brass steam cocks, standard	10%
Globe, angle and check valves, standard	5%
J. M. T.	20%
J.M.T. C.	25%
J.M.T. Gate Valves	15%
Gate or straightway	16/10%
Jenkins Globe	10%
Radiator valves, standard	23%
Do., removable discs	38%
Emco J. D. Valves	10%
Emco Check Valves	10%
Webber Gate Valves	15%

Pipe and Eavestrough Lower

Toronto.
New quotations showing a reduction in the prices of conductor pipe and eavestrough are announced this week. Elbows and shoes are now 55 per cent. off list, while conductor pipe and eavestrough, ridge roll and valley, are now 60 per cent. off. list The previous quotation was only 50 per cent.

Reports indicate that there is a fair demand for these products, but this is generally considered as seasonable and chiefly due to spring building activity. Prices are as follows:

TROUGH (Eave)		
O. G., Square Bead and half round. Size in girth:	Per 100 ft.	Per 100 ft.
8-in.	\$15 90	15-in. \$28 80
10-in.	17 70	18-in. 36 50
12-in.	21 20	
Less 60%.		

PIPE (Conductor)	
Plain, round or corrugated.	
	Per 100 ft. in 10-ft. lengths
2 in., list	\$18 40
3 in., list	22 30
4 in., list	29 60
5 in., list	40 00
6 in., list	49 00
Less 60%.	

Firmer Tone in Lead

Toronto.
The lead market has evidently developed a firmer tone during the past week and local lead quotations advanced a little.

Zinc is also on the upward trend, and the market promises to continue steady, while business is reported as showing a fairly strong activity.

Prices of the primary lead and zinc products, however, continue unchanged, as follows:

Lead pipe, list, per lb.	0 12 1/2
Lead waste pipe, list, per lb.	0 13 1/2
Do., over 8 in., list, per lb.	0 14 1/2
Lead pipe is subject to discount of 10%.	
Lead traps and bends	10%
Lead sheets, 4 to 6 lbs. sq. ft., in rolls, lb.	0 09 1/2
Cut sheets 1/2 c to 3/4 c lb. extra and cut sheets to size 1 c lb. extra.	
Solder, wire, lb.	0 34
Do., 40-60	0 26 1/2 0 28
Do., 50-50	0 29 0 31
Do., strictly, lb.	0 24
Do., commercial, lb.	0 22
Do., guaranteed, lb.	0 27
Do., wiping, lb.	0 22
Zinc sheets, per lb.	0 16
Calking lead	0 08 0 09

Wrought Pipe Quiet

Toronto.
Quietness continues to be apparent in the pipe market, and prices for both

wrought and steel tubing remain at the reductions recently announced in List No. 51.

Jobbers are reported to be doing a larger business, but pipe mill operations are rather irregular, and the outlook for future activity appears to be in doubt.

No Change in Plates

Toronto.

Buying in plates and sheets is still reported to be light, with sales fairly numerous but small. Quotations continue to show a range, with prospective signs of brightening in the future. The opinion has been expressed that the development of buying power is necessary before an improvement in present market conditions, or decided increase in volume of transactions, will be produced.

A gradual development along such lines is expected to produce improvement in many primary lines, and among the principal, of course, are sheets and plates. The following are current local quotations:

BLACK SHEETS		
14 gauge	5 10	6 10
16 gauge	5 20	6 20
18-20 gauge	5 75	6 75
22-24 gauge	5 80	6 80
26 gauge	5 85	6 85
28 gauge	6 00	7 00
PLATES		
10 gauge plate	5 00	6 00
12 gauge	5 05	6 05
14 gauge	5 10	6 10
16 gauge	5 20	6 20

GALVANIZED SHEETS		
Premier and Apollo		
10 3/4 oz.	8 60	9 60
U.S. 28 gauge	8 20	9 20
U.S. 26 gauge	7 90	8 90
22 and 24 gauge	7 35	8 75
18 and 20 gauge	7 60	8 60
16 gauge	7 45	8 45
12 and 14 gauge	7 40	8 40

An extra 40c per 100 lbs. is charged for Keystone brand copper bearing sheets.

An extra is now charged on galvanized sheets, 10 3/4 oz. and 28 ga., when shipped out in sheets 8 feet wide. The extra charged over prices shown above is 20c per 100 pounds. Other gauges show no change for different widths.

Prices shown are for full cases. An extra charge of from 25c per 100 lbs. is made for less than case lots.

Pipe Fittings Steady

Toronto.

Quotations on pipe fittings again remain unchanged, and the same remark can be applied to general conditions. No marked increase has been recorded, but an expectant attitude has been adopted by the more optimistic dealers. Current prices follow:

Cast iron fittings	20%
Plugs, cast	27 1/2%
Do., solid	10%
Do., countersunk	Net list
Bushings	30%
Unions, 1/4 in. to 2 in.	40%
Do., 1/2 in., 2 1/2 in. to 4 in.	35%
Dart-Unions, blk., 1/4 in. to 2 in.	29%
Do., 1/2 in., 2 1/2 in. to 4 in.	14%
Do., galvanized, add to black	30%

MALLEABLE FITTINGS	
Class A	0 60 0 75
Class B	0 23 0 32 1/2
Class C	0 15 0 25

Revision in Waste

Toronto.

In the waste market some brighter signs have been evident but very little improvement is generally shown. Nominal changes in some prices have been made, but conditions generally remain the same, with nothing of a special nature to record.

Local activity has been chiefly confined to the buying of cast iron scrap by foundries, who, it is reported, are not operating up to 50 per cent. capacity. The lower prices in pig iron have resulted in dealers being adverse to offering as much for cast scrap as formerly.

White metals have been firm, and the demand has slightly improved. The scrap rubber situation is at a standstill at present. Local dealers report conditions to be very quiet. Prices for fair-sized quantities, which contain a few revisions, follow:

WASTE MATERIAL

No. 2 busheling	13 00
Stove plate, per ton	18 00
Scrap pipe	8 00
Yellow brass	6 50
Red brass	10 00
No. 1 machinery cast	2 250
Heavy melting steel	13 50
Heavy copper	10 50
Light copper	8 00
Scrap zinc	4 00
Light brass	4 00
R.Rd. wrought iron, No. 1, per gr. ton	13 50
Heavy lead	4 00
Old rubbers, boots and shoes	2 00
Overshoes, lumbermen's rub. boots	2 00
Bicycle tires	0 75
Automobile tires	0 50
Tea lead	1 75

Ingot Metals Steady

Toronto.

The general situation in ingot metals remains the same and a dull outlook is the prospect here. United States and British markets have recently shown a revival of activity in copper and tin, with lead and zinc movements remain-

ing around previous levels. Some slight changes have been recorded in local prices but are not of sufficient degree to indicate market conditions.

TIN.—The upward trend of the market is still apparent and this feeling is reflected in a one-cent increase in local quotations, the price now being 38 1/2 cents. Local business is generally reported small.

COPPER.—The foreign copper market has taken on a more active appearance, and with Japanese, British and French purchases pending, the United States dealers are looking for an advance. In some quarters prices are reported to be a little higher, but local quotations still remain at 18 cents.

LEAD.—Activity in the lead market is the keynote of the ingot metal situation at this time. An increase in quotations from \$6.25 to \$6.50 has been recorded here, while foreign markets interpret conditions to mean another advance in the near future.

SPELTER.—Outside markets in this metal continue to be a little erratic. Buying is again reported to be very light and the quiet spell generally continues. Prices locally advanced to \$7.50, an increase of 25 cents over last week's quotation.

ANTIMONY.—This market is still firm, but generally less active than was previously reported. Quotations here remained unchanged at from 8 to 10 cents.

ALUMINUM.—The steady improvement in the automotive industry has been productive of a better feeling in aluminum circles. More inquiries have been received, and the price of 30 cents is still holding on local markets.

WINNIPEG MARKETS

WINNIPEG, May 13.—Reductions in wrought iron pipe form the outstanding feature of this week's market. Soil pipe and fittings also have lower revised prices. Cotton waste remains at the same figures, and lead products are also holding firm.

Galvanized range boilers are still held at the recent decline, and reductions have also been recorded on candle wick packing, sheet zinc and tin plate.

Business in plumbing and steamfitting lines is reported to be improving, and wholesalers are generally hopeful for the future. Collections are coming in fairly well.

Tin Plate Reduced

Winnipeg.

The prices have been lowered on tin plate and following are the new quotations:

In Full Boxes—		Per Box
IC 20 x 28		\$23 75
IC 20 x 33		28 50
IX 20 x 28		27 00
IX 20 x 33		33 50

In Half Boxes—		
IC 20 x 28		\$12 50
IC 20 x 33		14 75
IC 20 x 39		18 00
IX 20 x 28		14 00

Sheet Zinc Unchanged

Winnipeg.

The reduction of 7 1/2 cents per pound in the price of sheet zinc, announced in the last issue of Sanitary Engineer, is still in effect and the present quotation is 17 1/2 cents per pound.

Candle Wick Packing Steady

Winnipeg.

No change has been reported in the price of candle wick packing and the present market quotation is still 48 cents per pound.

New Discounts on Soil Pipe

Winnipeg.

Prices have recently been revised on soil pipe and fittings, and the new quotations are on a somewhat lower scale than previously. Following are the new discounts:

SOIL PIPE—	
2 and 3 in.	7 1/2% off
4 in.	25% off
5 and 6 in.	12 1/2% off
8 in.	7 1/2% adv.
SOIL PIPE FITTINGS—	
2 and 3 in.	25% off
4, 5 and 6 in.	40% off
8 in.	7 1/2% adv.

Cotton Waste Steady

Winnipeg.

No changes have been made in waste prices and the demand is stated to be improving. The following are present quotations:

Credit Men's Association in St. John, N.B., Hold Banquet

Business is Fundamentally Sound in the Maritimes, And The Few Failures That Have Taken Place Represent Only Small Amounts
—Board of Governors Elected For Two Years

ST. JOHN, N.B., May 3 (Special).—The keynote sounded at the annual banquet of the Maritime division of the Canadian Credit Men's Trust Association, Ltd., held in St. John on Friday evening, April 29, was one of caution to the business man. H. W. Rising, the president, was in the chair and an informal talk was given by W. J. Ambrose, manager of the St. John branch of the Bank of Montreal. Several members made short speeches, and the annual report of the manager, T. H. Sommerville, was received.

Increase in Membership

Mr. Sommerville presented the ninth annual report of this division for 1920-1921. The membership increased from twenty-eight full and four associate members to thirty-three full and four associate. Instead of increasing membership fees, it was decided to charge for an excess of reports between branches, which would bring in the needed revenue. The financial statement showed a good balance on the year's operations. Failures that had taken place during the last few months were few and unimportant in amount. There was a feeling that business interests were not suffering severely from depression. The report strongly urged that adequate accounting was necessary to success. While the business of the Maritime Provinces was regarded as in a healthy state, expenditures should be limited to absolute needs. The unemployment situation was affecting trade and collections to some extent, but it was urged that creditors should give consideration to worthy debtors. The report was received and adopted.

Want Loyalty of Members

The president, H. W. Rising, said that while collections were good members did not use the association as much as when they were bad. Consequently members had dropped out. He asked that all be loyal to the organization, as

it was useful to all merchants and manufacturers.

The following were announced as elected to the board of governors for two years: T. N. Campbell, of Moncton, N.B.; J. F. Edgett, of Moncton, N.B.; H. W. Emerson, W. A. Harrison, C. P. Humphrey, F. W. Roach and E. M. Smith, all of St. John; elected for one year, E. J. Murphey, of Halifax.

Business Is Sound

In his talk on business conditions in the Maritime Provinces, W. J. Ambrose said that the bankers' viewpoint sometimes differed from that of the merchant. The banks had been preaching caution and prudence. They had advised that only such purchases be made as were necessary for actual business in view. Those that had followed this advice were now reaping the benefits. Business in the Maritime Provinces was fundamentally sound, he said. He described optimism as having faith in the future. He said that this spirit prevailed in the Maritime Provinces. With a reasonable amount of prudence and co-operation between the debtor and creditor merchants could be assisted and eventually become successful.

Lack of Good Faith

W. Matthews, of Moncton, N.B., agreed with the former speaker's policy of caution. R. T. Hayes, M.P.P., said one cause of depression was the lack of good faith by those they dealt with in cancelling orders. J. G. Harrison said that the advice given was sound. Most of the merchants were overstocked and while grocers had liquidated stocks pretty well, other lines had not. Need of co-operation was voiced by F. W. Roach. It was in the best interest of debtor and creditor. The debtor should not be forced too much, but given a chance to turn round. E. L. Rising attributed the setback to business to the luxury tax, but expected better conditions during the next six months.

WASTE—Cream, polishing, 24 1/2c; White, XXX extra, 21c; XX Grand, 20c; XLGR, 19c; X Empire, 17 1/2c; X Press, 16c. Colored, fancy, 17 1/2c; Lion, 16c; Standard, 14 1/2c; Popular J, 13c; Keen, 11 1/2c.

The Finest One-Register Furnace on the Market

Jewel Pipeless Furnace

A Successful Heating Appliance

The success is very natural, based, as it is, on exceptional merit, and following where the reliable Jewel Furnaces have already blazed the trail. The efficient Jewel Pipeless has the same splendid qualities that have made the name "Jewel" famous throughout the Dominion.

Real Serviceable Heating

is the primary requirement for homes, schools, churches and other buildings. The Jewel Pipeless gives real, serviceable heating. The Furnace has two casings, the outer casing acts as a Cold Air duct, the inner casing as a Warm Air Flue.

The Duplex Register is directly over the furnace. The Outer Section is for admitting *Cold Air*, the Inner Section for delivery of *Warm Air*.

The casings can be made suitable to any cellar.

A postal request will bring full information and prices.

To Your Advantage

It is certainly a valuable support, and assistance in business, to be protected against costly errors and mistakes in prices. You cannot be in touch, all the time, with markets, but Allpriser can be, and is. Allpriser Service keeps you and your clerks always informed of fluctuations in the cost and selling price of the goods you handle. It may save you hundreds of dollars per year. We all make mistakes, and the greatest source of loss is the fact that it is only in a few cases that we know we have made them! It pays to be protected.

Allpriser Service consists of a flexible, leather-bound book 7x9, of 150 loose-leaf pages. The service includes a list of net prices of all staple articles, and a regular service of new sheets revised to the latest changes. It only costs you about 7 cents a day—isn't it worth that to be sure—to be protected against mistakes?

It only costs a Postage Stamp to investigate. It may cost many dollars to pass this up. I want you to choose!

And Now— Toronto Printers May Strike

THE present agreement between printers in book and job offices and employers in Toronto expires May 31. The minimum wage paid is \$35.20 per week (increased voluntarily a year ago by the employers from \$32.00, although the agreement had a year then to run). This wage covers a 48-hour week.

The International Union is demanding a week of 44 hours as the basis for all wage scales, and the Toronto unions are demanding a wage of \$44.00 per week of 44 hours, \$8.80 more per week for 4 hours less work.

This means an increase from 73 cents per hour to \$1.00 per hour, or over 36%.

Publishers and other employing printers feel that under present conditions of business and the admitted decreasing cost of living, the increased wages and shorter hours demanded by the International Union are unreasonable.

This is acknowledged by many of the thoughtful, loyal printers employed in the Toronto offices, who believe that the International Union has blundered in its demand that local unions shall not sign new agreements except on the basis of the 44-hour week.

The position, however, may be that these local men may not be able to make the International officers in Indianapolis see that to force a strike now on these unreasonable demands would be an act of folly—and a strike may be called on June 1st.

The facts of the case are presented here, for the information of the sections of the public—subscriber and advertiser—reached by this publication.

The attitude of the employing printers is shown by their voluntary action in giving a 10 per cent. increase last year while the agreement calling for the minimum wage of \$32.00 a week had still a year to run.

They feel strongly now, however, that this is not a time when an increase of 36 per cent. in the labor cost of production should be permitted.

If publishers are forced to pay \$44.00 a week instead of \$35.20 and get only 44 hours of work instead of 48, it is inevitable that subscription and advertising rates must advance. No business can stand an increase in its wage bill of 36 per cent. and absorb that increase. The extra cost will have to be added to the sale price of the product.

Publishers sincerely hope that the great body of sane opinion among the local printers may prevail and that the Indianapolis officials will be induced to withdraw their unreasonable demands so that Toronto printers may continue to find well-paid, congenial employment.

If this sane, thoughtful opinion does not prevail, a strike seems inevitable, with its equally inevitable result of loss to the printers and publishers, and inconvenience and loss to the public.

An expression of the opinion of readers of this paper on the Union's proposals, involving an increase of 36% in the labor cost of printed matter, is asked. Will you not write a letter to the editor (not for publication) telling him your view of the situation?

This statement is published by and has received the endorsement of the Toronto publishers who are members of the

Canadian National Newspapers and Periodicals Association

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

The Easiest Thing to Sell

In these days when everything is said to be hard to sell, it is a treat to get hold of something that is easy to sell.

The Westco Tankless Water System is actually easy to sell, and we would gladly prove it to you.

In the first place, the dealer knows what a boon running water is to every farmer, and his family.

The farmer and suburban resident does not have to be *sold* on the idea of running water on the farm or in the home, but what they do hesitate at is paying high prices for a system that is mainly a collection of tank, wheels, gears, valves, belts, etc., a multitude of moving, wearing parts.

Now the **Westco**
Tankless Water System

has NO TANK
NO GEAR
NO VALVE
NO BELT

Its quality and durability are guaranteed.

It has only one moving part—the impeller, and this, with its outer casing, is all bronze, so it is absolutely wear proof and rust proof.

It is automatic—and self-lubricating.

Where it is being advertised it is in heavy demand. It has been advertised in your territory. It is easy to sell to those without running water in their homes because it is so perfect in construction, so efficient in operation, so low in cost, slow in wear, and free from troubles.

Write us for particulars of our Dealer's Co-operative Plan.

B-M Gas Water Heaters are made in Canada

Buy Canadian-made goods and refuse to buy any other, even to the extent of doing without—is our loyal duty now.

This applies — whether it's food, luxuries — or whether it's gas water heaters.

B-M Heaters are Canadian-made Gas Water Heaters with a reputation for high heating-efficiency and low operating-cost. Combining range boiler and heater in one they are installed with fewer connections, more easily and at a lower cost to your customer.

They save the plumber's time, at the same time give him a generous profit. Investigate B-M Heaters. Send for literature and prices.

The Farmer Needs City Comforts

IN Ontario alone it is estimated by the best authorities that there are over 150,000 farmers who have no bathroom in their homes. Look at the big lot of prospective plumbing work there is for you. The question of sanitation on the farm is one of the most important. The sanitary fixtures of a bathroom and modern kitchen must be discharged into something. The septic tank takes the place of city sewers and every septic tank must be fitted with something that will ensure a positive intermittent discharge. This discharge must flow into a large number of sub-surface field tile, and nature does the rest.

ONE of the main reasons why the average farmer has not had his home fitted up with a modern kitchen and bathroom is because he was skeptical about the final disposal of the sewage. The cesspool proved to be not only insanitary, but also unsatisfactory, and the farmer is realizing this more now than ever.

EVERY agricultural college in Canada is telling him about city conveniences and this makes it easier for you to sell him a bathroom outfit. We are advertising our syphons in farm journals so that the farmer will know about them, thus again making sales easier for you. *Your jobber can supply your needs.*

"Emco" Gate Valves *For High or Low Pressure Duty*

A-861

The "Emco" Webber Pattern, Solid Wedge, Non-Rising Stem, Gate Valve is of heavy construction and made from the best Steam Metal.

It is designed and registered in the various Provinces for Steam Working Pressure of 175 pounds and Water Pressure of 225 pounds per square inch. It has a Packing Gland and its workmanship and finish are outstanding features.

Our Standard Pattern Gate Valve, with Solid Wedge and Rising Stem is of lighter construction and designed only for Steam Pressure of 125 pounds and Water Pressure of 175 pounds per square inch.

It has the Solid Gate Feature of our Webber Pattern, which insures good shut-off. The Solid Type of Gate is universally acceded to be the best in the smaller sizes of Valves, where the Split Wedge Pattern with its intricate small parts wears easily and it becomes difficult to obtain a complete shut-off.

Quality

is an essential in the upbuilding of any business with permanence. Quality is one of the three legs of the Tripod of Business. This Tripod is as necessary to the stable support of business as is the Famous Tripod of Life—the heart, lungs and brain—to human existence.

Efficiency

represents the second leg of the business tripod. Without efficiency there can be no success, because efficiency signifies a satisfactory relation between the result obtained and the effort invested. We burn so much coal to obtain a certain horsepower in steam. We invest a given sum of money in business; if the business is efficient it produces a satisfactory return.

Service

is the positive complement of Quality and Efficiency, without which they could no more stand alone than could a three-legged stool with one leg lacking. The amount of our service to society at large is practically the measure of our receipts from the world—especially in business.

The Pilot Superior Pipeless Furnace

Don't Take Our Word For It! Read This Letter From An Impartial Third Party

The Hall-Zryd Foundry Co.,
Hespeler, Ont.

Gentlemen:—

In reference to the No. 844 Pilot Superior Pipeless Furnace installed in my residence, would say that I have found this to give perfect satisfaction, heating my residence upstairs and down with practically no difference in temperature. I have found this furnace to have many advantages over the steam plant which I also have installed in my residence, the particular benefits being that in Spring and Fall we can have almost instant heat after starting a fire in the furnace, and I find it takes considerably less fuel as you get the benefit of every pound of coal burned in the living rooms, while with the steam plant a great part of it is wasted in the basement. On account of it being necessary to install this furnace in the north-west corner of my residence, the efficiency of it seems remarkable.

R. McKie,
c/o The McKie Buggy Co.,
Plattsville, Ont.

Pilot Superior Pipeless Furnaces cost less to install; they do not block up the cellar with a lot of costly pipes; no remodelling of the house is needed, merely one hole cut in the floor.

In this effective, pipeless system, the heated air leaves the central portion of the one large register, circulates through the house, because lighter than cold air, and, having warmed the rooms, cools, and returns to the lower levels of the house. There it enters the outer portion of the register into an exterior casing of the furnace. It is then reheated by passing over the hot castings of the furnace. Ask for literature, to-day. This Pipeless Furnace is going to pay you!

EFFICIENCY FACTS versus BIASED OPINION

Made-in-Canada

SPENCER WATER-TUBE STEAM BOILER
Capacities 1,000 to 10,000 sq. ft.

MODERN boiler construction versus antiquated types, IS positively demonstrated in the construction and operation of the SPENCER Self-feeding Boiler.

It is the only type of boiler on the market that will successfully burn all of the various sizes and grades of fuel in a positively smokeless manner, with minimum attention and the greatest economy.

Every owner of a Spencer Boiler is privileged to purchase the lowest priced fuel in his particular district. These facts were conclusively proven during the memorable months in which the fuel rationing ordinance was in vogue, especially in Eastern Canada. REMEMBER, the name of the Spencer Self-feeding Boiler stands for the best heating service known at this age, either for Hot Water or Steam in any type of building.

A few installations will drive home to you these **EFFICIENCY** facts

"JARDINE" and "TOLEDO" Pipe-Threading Tools

Interesting Features

The Jardine and Toledo have no cams or gimcracks to get out of order, and the dies only cut with the mouth of the cutter. Also, as the tool advances on the thread the dies open out so as to make the proper taper. This means there is no friction on the pipe and every ounce of strength is used in making the cut, so saving time and labor. These are only a few of the valuable features of these tools.

Which?

*Mistakes That Cost Money or
A Service That Saves You Money?*

Mistakes in cost and selling are of frequent occurrence. The worst of it is that the mistakes that come to our knowledge are but a small percentage of those that occur in a business.

With Allpriser you are safeguarded from mistakes of yourself or employees. Allpriser keeps in touch with the markets better than you can possibly have time for.

Allpriser Service consists of a flexible, leather-bound book 7" by 9", of 150 loose-leaf pages. The service includes a list of net prices of all staple articles and a regular service of new sheets revised to the latest change. It prevents mistakes by giving accurate pricing; reduces overhead by money saved on mistakes; saves time and worry; makes estimating easy, and costs little.

Plumbing Trade's Views on New Taxes

Manufacturers Will Endeavor to Find Means of Effecting Economies to Offset Higher Costs Due to Increased Sales Tax on Purchases of Materials—Encouragement to Foreign Firms to Locate Branches in Canada

"ON our particular line we do not expect the new measures imposed by the budget to affect our prices except in change of Sales Tax from 1 to $1\frac{1}{2}$ and 2 to 3 per cent. charged on all sales," said A. J. Dickey, Vice-President and General Manager C. A. Dunham Co., Toronto, in discussing the new tax and tariff legislation with Sanitary Engineer.

"Our aim will be to discover ways and means of effecting economy that will offset the increase in sales tax that will apply to purchase of raw materials entering into the manufacturing costs, of our finished products.

"The revenue measure is designed for consumers to pay their respective share of the budget, in proportion to their consumption of goods, and contractors will naturally have to take this item into consideration in making up their tenders or prices.

"Whether the sales tax will prove an effective instrument in the raising of necessary revenue remains to be seen. It is more equitable than the Business Profits Tax, and the elimination of the latter will eventually result in more favorable sales prices of commodities.

"One of the greatest benefits that will be derived from the budget will be the encouragement of foreign industries to establish themselves in Canada if they hope to cultivate Canadian business. The new measure for raising revenue as outlined in the budget will favor Canadian made products, where quality is the same as imported goods. This is, as it should be."

Will Increase Prices

"We have not looked into this matter very carefully yet, but we think the new taxation will increase prices to some extent on both domestic and imported supplies," said C. A. Lushy, secretary and treasurer Amherst Foundry Co., Amherst, N.S. "We believe however, that this is a better way to raise revenue than by an Excess Profits Tax, and as the government certainly must have the money, it is probable that this is as good a manner as could be devised for raising it."

Changes Are Very Fair

"We think the present tariff changes are very fair in every way and should have a tendency to reduce the imports from United States to Canada; especially if people would have to pay duty on the exchange in addition to the invoice value of goods," said C. Stevens, secretary Empire Brass Manufacturing Co., London, Ont.

"There is also the fact that American manufacturers,

even if they are selling goods in the United States at cost, cannot import the goods into Canada at their cost. They have to show a margin of profit over cost before selling the goods in Canada.

"The increase in Sales Tax, we think, is a very fair way of raising a revenue."

Duty on Materials Unchanged

"The new taxation has affected our line of products very little," said G. A. Walker, advertising manager H. Mueller Mfg. Co., Sarnia, Ont.

"So far as we have been able to judge the only difference it will make to us will be that our Sales Tax, as in the case of other Canadian products, will be slightly increased but the duty on raw materials used in the manufacture of our brass goods remains unchanged."

Prefer Even Percentage

Brass manufacturers in discussing the budget and its new tax and tariff regulations voiced the opinion that they would prefer to see the sales tax increased to 2 per cent., rather than only 1-2, as the odd split would no doubt cause many trivial irregularities. The even cent would be much easier to handle when applied to small sales, especially where these are numerous. It was apparent that the budget comprised a very fair attempt at impartiality.

A. C. Leslie & Co., Ltd., express themselves as being well satisfied with the new budget taxes. Although importers of galvanized and black sheets, copper, lead and lime sheets, and other lines of which there are Canadian competitors, the handicap exists with the extra tax to 2-1-2 per cent., on imports, yet the taxes are considered fair and it is realized that some must needs suffer more than others, no matter what proposals are brought down.

"We have heard very little complaint but naturally no one 'hollers before he is hurt' and it may be that some one will be pinched in the working out of this and you may be sure if such is the case there will be a loud wail go up," said A. T. Enlow, president Dominion Sheet Metal Corp., Hamilton, Ont., discussing the new tax and tariff legislation.

"It would appear to us that the proposition is worked out on a very fair basis as proposed in the new budget and the main difficulty from our viewpoint will be to enforce the dumping clause if it is made effective, due to the fact that it is difficult for the customs authorities to get proper information when the market is changing frequently but nevertheless the clause is to our mind a very good one, as well as the clause adding the United

States exchange to the valuation of duty, because the exchange is a part of the cost.

"It is all well enough for those who never wander from their own fireside to view with complacency the conditions which have made the exchange rate so favorable to the United States brought about largely by purchases unnecessarily on our part, but their attitude might

change if they went to the other side occasionally and attempted to pass Canadian money.

"It is a fact to-day that in Cleveland Canadian currency is not only unacceptable but is a source of ridicule and the butt of jokes and will not be taken by the average business man at even 50 per cent. discount, while the larger merchants arbitrarily deduct 20 per

cent. regardless of what may be the ruling rate of exchange at the time.

"I think we should back up the Minister of Finance to the extreme limit and, however painful it might be to curtail foreign purchases at least for a few years, we would find that Canadian currency would be at a premium instead of a discount because there is no country so blessed with all the fundamental elements of prosperity as Canada."

Interesting Points in Retailers' Test Case

Recent Hearing of Case to Determine Status of Various Branches of Trade Decided in Favor of Retailers—No Steps to Have Refund Made to Tinsmiths.

THE judgment in the test case which was taken by the Dominion Government against Messrs. Pedrick and Palen, merchant tailors, Bank Street, Ottawa, to compel them to take out a manufacturer's license and pay a sales tax, was rendered in favor of the defendants, and incidentally in favor of thousands of retail merchants throughout Canada, including tinsmiths.

The decision is vastly important, because it settles once and for all the question of what constitutes a retail merchant. It will be a precedent for other courts throughout Canada in settling questions of a like nature. This case was defended by the Retail Merchants' Association of Canada, and it took up a lot of time and attention, but it was well worth both the time and the expense because it practically covers every case that has come up in every section of the retail trade since the War Revenue Act came into operation, and it proves beyond doubt that the association's contention was right. The question of what constitutes a manufacturer, a wholesaler and a retailer has been one that has caused contention and discussion over a period of forty years. Latterly when governments have undertaken to put restrictions on any of these classes, the clerks in the various departments of the government, who are not familiar with commercial conditions, have placed their own interpretation on it. For instance, not so long ago the department of statistics was asked by the department of labor to gather certain facts concerning manufacturers. This department immediately took it upon itself to classify certain retailers as manufacturers, with the result that the retailers in question were put under the inconvenience of filling out forms, which caused them an immense loss of time and much expense. When such cases as these arise in the future there can be only one basis of settlement.

The decision will likewise be a precedent for the other courts when questions

arise, such as under what class, in the Assessment Act, a merchant would come. For instance, the assessment in Ontario is 60 per cent. on manufacturers; 70 per cent. on wholesalers and 25 per cent. on retailers. The decision will help the revision and county courts of each province to settle this question, which has been a most contentious one for years.

The Judgment

In referring to the word "manufacturer" the judge states that it is an elementary rule of statutory construction that every word ought to be construed in its ordinary or primary sense, unless a secondary or more limited sense is required by the subject matter of the context. He then goes on to say what is the primary and natural meaning of the word.

SALES TAX MUST BE SHOWN SEPARATELY

Some amendments have been made to the original budget as outlined in the May 15 issue of Sanitary Engineer. One of these provides that the purchaser will be furnished with a written invoice of any sale stating separately the amount of the tax to at least the extent of 1½ per cent., such tax not to be included in the manufacturer's, producers or wholesaler's costs on which profits are calculated.

Asked why the whole tax should not be shown Sir Henry Drayton said if the manufacturer made a sale direct to the retailer and if he had to show the whole tax he would show twice the tax shown by the wholesaler. The manufacturer desired the opportunity of showing the same tax as the wholesaler and it was given in the amendment.

"From its etymology the word obviously means to make by hand. Under this primary signification every human being, it must be conceded, is a manufacturer in the sense that, owing to the rigor of the punitive dispensation to which our race was condemned after the fall of Adam, he has to use his hands. But that is not the meaning that is to be attached to this word 'manufacturer' in the present issue. The object of the act cannot be to weld into the class of manufacturer all classes of men who manufacture, who make or do any work, or part thereof, with their hands.

"Apart from any legal rule of construction would it not seem to submit the word to an undue straining, to do violence to the English language to hold for instance a humble seamstress, dressmaker, making a few dresses for consumers, to be a manufacturer—or, as in the present controversy, a humble merchant tailor making suits for consumers to be a manufacturer. If a meeting of manufacturers were called to discuss matters relating to their business, neither dressmakers nor retail merchant tailors would be expected or even allowed to attend such a gathering. There is but one sane conclusion to be arrived at, if one is to be guided by common sense, and that is the retailer is not a manufacturer in the general acceptance of the word."

Costs Large

Commenting on this judgment, E. M. Trowern, secretary of the Retail Merchants' Association of Canada, said: "It is a disagreeable position for any association to take—that of opposing any government legislation, but the case which has just been settled was one of such importance to the retail trade of Canada that we found it could not be settled in any other way. We were forced to take it to the courts. The costs have been large, but the result of the action means that every line of the retail trade will be benefited and the result emphasizes the importance of all

retail merchants being united in one big organization, and not divided into separate groups, or separate single lines of trade associations.

"The head office being located in Ottawa, and having the facilities for giving the Act close study when it was first prepared, and following its passage through the House of Commons and the Senate, enabled us to understand its intent and meaning, and we were certainly surprised when we found the Department of Customs and Inland Revenue endeavoring to classify all retail merchants who do a small amount of assembling and manufacturing in almost every line of retail trade as manufacturers.

"We presented our views to the Department and also to the Government, but we secured no redress. We then engaged the best counsel obtainable in Ottawa and explained our case to him, and a suit was commenced in the Exchequer Court. We asked our members not to take out manufacturers' licenses, or to collect or pay a sales tax, pending the result of this suit. A very large number of members in all parts of Canada stood loyally behind us in our request, and by doing so they have been saved considerable annoyance as well as a great expense, which should show them once more the value of being members of one big, united organization such as ours.

"A few of our members, and many who are not members, who took out manufacturers' licenses and paid the sales tax have asked our opinion as to the advisability of their requesting the Government to have the sums so paid returned to them, but we have advised them that we do not feel that we should be called upon to take this matter up with the Government, especially as we requested the retail trade generally not to take out a manufacturer's license or to collect or pay a sales tax.

"There is another suit still pending in another court in Ottawa against retail confectioners, which was instituted by the Government and which is being defended by our association. There is a slight difference between the two cases, as this one involves the question of the luxury tax as well as the question of the sales tax, but we have every reason to believe that we will also succeed in our contention in this matter."

Jack Frost Ice Machine Co., Ltd., has been incorporated in Ontario with capital of one million dollars and head office in Toronto, to manufacture laundry machinery, refrigerating machinery, refrigerators, pumps, furnaces, stoves, ranges, boilers, lavatories, baths, heaters, sinks, toilet wares, pipes for water, gas, sanitation and drainage, household implements and utensils.

Programme

Twenty-Fourth Annual Convention

of

The Canadian Society of Domestic Sanitary and Heating Engineers

June 6th, 7th and 8th, 1921
City Hall, Quebec, P.Q.

Delegates Headquarters - - Ste. Ursule Hotel

MONDAY, JUNE 6th

- 10.00 a.m.—Organization Meeting of Quebec Provincial Association.
- 2.00 p.m.—Canadian Society Executive Committee Meeting.
Appointment of Special Committees.
- 4.30 p.m.—Auto Drive around City and National Park.
- 8.00 p.m.—Conference on "Possibility of Promoting Increase of Construction Through Advertising."
Addressed by Mr. E. C. Smith, manager of Quebec Daily Telegraph.

TUESDAY, JUNE 7th

- 10.00 a.m.—Official opening of the Twenty-fourth Annual Convention. Address of Welcome by Mayor of Quebec City.
Officers' reports.
- 2.00 p.m.—Report of Special Committees.
Selection of next meeting place.
Nomination of Officers.
- 3.30 p.m.—Conference with Manufacturers and Wholesalers.
- 4.30 p.m.—Promenade on river around Harbor to Dry Dock and Quebec Bridge.
- 8.30 p.m.—Conference on the best means to raise the efficiency of the industry. Addressed by Mr. Thos. J. Minnes, Brantford, President Canadian Trade Extension Bureau.

WEDNESDAY, JUNE 8th

- 10.00 a.m.—Election and installation of new officers.
Study of by-laws regulating sanitary plumbing.
- 2.00 p.m.—Unfinished business.
Grand wind up. Vive la Canadienne, Canada for ever.
- 4.30 p.m.—Drive to Ste. Anne and Montmorency Falls.
- 8.00 p.m.—Banquet at Kent House, Montmorency Falls, tendered by Wholesalers and Manufacturers.

GOD SAVE THE KING.

Pattern for Furnace Boot

By O. W. Kothe, Principal St. Louis Technical Institute and Instructor in the David Rankin, Jr., School of Mechanical Trades, St. Louis, Missouri

Question.—Will you please show us how to draw a pattern for a half off set or straight boot or furnace bullhead?—Webster & Van Male, Welwyn, Sask.

Answer.—The terms used to designate this particular boot must be somewhat local, since the writer is unable to define exactly what is meant by them. Local expressions have different names for various fittings and we would therefore suggest that readers having problems

should make a small sketch drawing of what they have in mind. That gives a definite outline and shape of what the correspondent has in mind and does not require so much guess work on this end of the line.

In this case we have selected a problem that may possibly approximate what the subscriber has in mind. We first draw the elevation, drawing the sides of rectangle for stack as D-C, whose half

section would be as T-H-h-t in true lengths diagram. Then make the length C-D quite short, possibly an inch and a half or two inches wide. After this draw the heel D-A and bisect the angle of heel D-A-1 as in point a. After this add the body of round pipe by drawing 1-7 to the diameter of pipe and to the angle you wish the boot to point to. Describe the semicircle and divide in any

Problems of Sewage Disposal in West

Investigation and Recommendations of Commissioner of Public Health in Saskatchewan Reveal a Solution of Intricate Problems of Sewage Disposal Found in Western Canada Where Subsoil is Nonabsorbent, Where There is Scarcity of Watercourses and Where Frost Penetrates Deeply Into the Ground

Report presented by M. M. Seymour, Commissioner of Public Health, Saskatchewan, and Hon. G. Langley, Minister in Charge of Public Health

A FEATURE in the development of rural Saskatchewan during recent years has been the construction throughout the province of modern farm homes. These residences are in almost every

perience in constructing and operating sewage disposal plants in Saskatchewan, an investigation has been made by officials of the Bureau of Public Health during the past year of the systems of sewage disposal in actual use at 72

Necessity for Treatment

Each of these methods of disposal requires some form of preliminary treatment to remove a proportion of the solids, otherwise a serious nuisance will be created.

Cesspools

The cesspool is an attempt to combine treatment and disposal of the sewage and it accomplishes neither. A cesspool, as one usually finds it, consists of a covered hole in the ground, the sides being cribbed with wood or lined with concrete or brick but with nothing but earth for a bottom, the purpose being to allow the liquids to soak away into the ground. The solids in the sewage settle to the bottom of the cesspool and choke any porous soil that may be available for absorption and the cesspool quickly becomes stagnant and offensive. The construction of cesspools as above described is no longer authorized by the regulations issued under the Public Health Act.

Septic Tanks

The septic tank is the simplest and most practical form of treatment to reduce the suspended matter and to render the sewage capable of final disposal with the minimum of nuisance.

What the Septic Tank Does

The function of the septic tank is to expedite the natural processes of decomposition and putrefaction.

case equipped with electric light and power and all the labor-saving devices and conveniences which were at one time thought to be available only for the urban population. There has, however, been a tendency to postpone the installation of modern plumbing fixtures pending more definite and reliable information on the type of sewage disposal system best suited to the local conditions.

Experience has shown that a system of sewage disposal which could be left to run itself on a farm in the eastern provinces will not prove so accommodating if installed in Saskatchewan where the subsoil is for the greater part a stiff nonabsorbent clay, where creeks or water-courses are almost unknown and where the frost can be relied upon to penetrate six feet into the ground each winter.

The conclusions arrived at as a result of this investigation are embodied in the following pages and in the revised plumbing regulations. Such provisions of the latter as concern the disposal of sewage are appended to this bulletin.

Sewage Treatment

Sewage from a farm house, that is, the waste water from water closets,

In the "Plumbing Regulations" issued under the Public Health Act reference is made to the construction of sewage disposal systems for isolated buildings. It is with a view to supplementing these regulations and to meeting the repeated requests for information concerning the principles, construction and operation of a sewage disposal plant for a rural home on the prairie that this bulletin has been prepared.

In order that the information which follows may be a true statement of ex-

perience in constructing and operating sewage disposal plants in Saskatchewan, an investigation has been made by officials of the Bureau of Public Health during the past year of the systems of sewage disposal in actual use at 72

farmhouse. The conclusions arrived at as a result of this investigation are embodied in the following pages and in the revised plumbing regulations. Such provisions of the latter as concern the disposal of sewage are appended to this bulletin.

Sewage from a farm house, that is, the waste water from water closets,

baths, sinks and wash tubs, may be disposed of in one of three ways:

- (1) By discharge into a watercourse.
- (2) By discharge into the subsoil.
- (3) By discharge on the ground surface.

Two simple changes take place in such a tank. The first is the settlement of the solids to the bottom, the grease and lighter particles floating to the top.

The second is the rotting of the settled solids.

This is brought about by the action of a certain type of bacteria which multiply in the solids and in the scum which forms on the surface of the tank.

These bacteria thrive without oxygen and break up the solids into liquids and gases. The above is all the septic tank does or claims to do.

The statement has often been made that sewage after passing through a septic tank has under gone "a ninety per cent. purification" and responsible citizens have averred that the effluent from a septic tank should be fit to drink.

Let these illusions be once and for all dispelled.

The effluent from a septic tank is just as dangerous to health as the raw sewage which is discharged from the house.

A septic tank removes the greater

in some cases be constructed close to the house. (See figures 2 and 4.)

The basement or foundation wall of the house must under no circumstances be used as a wall of the tank, but the tank wall, if it has a minimum thickness of 9 inches of concrete may be built against the basement wall.

In such cases every precaution must be taken to make the tank absolutely watertight.

The inside of the tank should be finished with a coating of cement mortar in the proportion of 1 of cement to 1 of sand.

The tank should not be situated under a window or near to a door.

Construction of Septic Tank

The dimensions of the septic tank should be 4 feet 6 inches in length by 3 feet in breadth by 4 feet in depth. See figure 5.)

Wrought iron steps let in to the walls of the tank should be placed immediately below the manhole.

Final Disposal of the Effluent

Three methods of disposal have been referred to and these will be discussed separately.

Discharge of Effluent Into a Watercourse

The surface water supplies of Saskatchewan are very limited and they are all liable to be used as sources of domestic water supply.

It is contrary to the provisions of the Public Health Act to discharge any liquid wastes, including the effluent from a septic tank, into a stream, river or lake unless a certificate has been issued by the Commissioner of Public Health stating that the effluent in question may be discharged without injury or danger to the public health.

Such a certificate would, generally speaking, be granted subject to the construction of filter beds or some form of secondary treatment which would render the effluent free from offence.

Any person contemplating sewage disposal by this method should communicate with the Bureau of Public Health when a special investigation will be made of the circumstances.

Discharge of Effluent Into the Subsoil

This method is the most common form of disposal of a septic tank effluent. It is applicable only to a limited quantity of liquid, such as that represented by the flow from a residence of average size.

Its success depends almost entirely on the porosity of the ground.

The subsoil throughout the greater part of this province is a non-absorbent clay, and the general adoption of this method of disposal in Saskatchewan must therefore be attended by difficulties.

The discharge of sewage or of a septic tank effluent into the subsoil within the limits of any city, town or village in Saskatchewan is contrary to the provisions of regulations issued under the Public Health Act.

The Use of An Absorption Field

The effluent from the septic tank overflows into a "dosing" or syphon chamber which gradually fills to a certain level and discharges its contents at intervals by means of an automatic syphon into a series of open-jointed field tiles laid under the surface of the ground.

The liquid is thus gradually absorbed by the subsoil or soaks through to the under-lying strata.

It must be obvious that if the ground is not porous, that is, if there are no indications of sand or gravel, or if it is already waterlogged, this means of disposal cannot be adopted with success.

It has frequently been asserted that a clay subsoil may be made to absorb a septic tank effluent by placing the tile pipes in a bed of broken stone or other coarse material.

FIGURE 3.

part of the solids from the sewage but it does not necessarily remove or destroy any disease organisms which may be present in the sewage as it enters the tank.

Nor is the effluent free from offence. If allowed to pond on the surface of the ground it will create a nuisance.

A septic tank will not continue to operate indefinitely without attention.

Although the purpose of the tank is to liquefy the solids, a certain amount of solid matter and residue will accumulate in the tank and will require removal once or twice yearly.

Location of Septic Tank

The excavation necessary for the tank may be greatly reduced if advantage is taken of any fall which there may be in the ground surface.

The soil pipe should be led from the house at the point nearest to the site of the tank.

Too frequently the plumbing is completed without any consideration being given to the location of the tank and disposal area, resulting in the latter being sited to suit the soil pipe.

In view of the low temperatures of our winter it is necessary to consider every means by which the contents of the tank may be protected against frost and for this reason the septic tank may

This size of tank should be used in all installations for 12 persons or under.

For larger installations the capacity of the tank should be equal to 24 hours flow of sewage estimating the latter at 30 gallons per head per day.

The depth of the tank below water level should never be less than 4 feet.

The length of the tank should be in the direction of flow and should be about one and one-half times the width to give uniform flow through the tank and to ensure that the outlet is reasonably distant from the agitation caused at the inlet.

The inlet to the tank should be baffled by discharging the sewage through a T pipe which should extend 15 inches below the water line.

The effluent from the tank should be drawn off at a similar depth below the surface, through a T pipe, to prevent the discharge of any scum.

The gases which are formed by the bacterial action in the tank escape through the inlet T piece along the inlet pipe and through the soil pipe to the roof of the house.

An airtight cover must be provided for the tank. This should be a concrete slab with cast iron manhole cover and frame of sufficient size to permit of the tank being inspected and cleaned out.

Statements like this are entirely misleading.

If the ground is sandy and will absorb a certain amount of liquid, its ability to absorb the effluent may certainly be increased by surrounding the tile pipes with broken stone or gravel. But if a 6 inch diameter hole drilled in a bed of clay were filled with water and it was found that the water did not soak away it would be futile to enlarge the hole to 18 in. diameter and to line it with stones as a means of making the water soak into the ground. The effect would simply be to increase the capacity of the

of the treated effluent—and in the absence of a porous subsoil it is only throwing away time and money to construct an absorption field.

Design of Syphon Chamber

If the ground is suitable for an absorption field a syphon chamber should be built to discharge the effluent of the bed intermittently. The syphon chamber should be constructed along with, and should form a second chamber to the septic tank (See Fig. 5). The capacity of the syphon chamber should be such as to cause the field to be flushed about

syphon overcomes the pressure of the column in the short leg and part of the sewage in the latter is forced out.

This starts the full flow through the syphon which continues until the sewage in the syphon chamber falls to the under side of the bell, when air is again admitted, the pressures are equalized and the flow ceases.

An overflow pipe from the syphon chamber is necessary in case the syphon should fail at any time. This even flow acts also as a vent pipe to provide air for the syphon. Vent pipes should also be left in the wall, which divides the septic tank from the syphon chamber, if this wall is carried up to the roof of the tank. A manhole similiar to those specified for the septic tank is required in the cover of the syphon chamber and wrought iron steps may be provided to facilitate inspection.

Construction of Absorption Field

If the effluent were to be discharged into the subsoil directly it left the tank the ground surrounding the house would be fouled. A fire-clay pipe with tight joints should therefore be laid with a fall of 1 in 100 from the syphon chamber to a point at least 35 feet from the house, where a distribution chamber or manhole should be constructed. From this manhole the effluent is run through open-jointed tiles and absorbed by the ground (See Figs. 1 and 2). As a general rule 50 feet of field tile should be provided for each person in the house or 300 ft. for a household of six. In subsoils of sand or gravel the amount of tile per person may be reduced to 40 or even 30 lineal ft. The lines of tile should be laid 4 ft. apart, with a fall of about 3 inches in 100 ft. The field may be conveniently excavated by means of a team and scraper.

Open tile drains should be laid on and surrounded by a 9-inch bed of broken stone, brick bats, gravel or other coarse material to facilitate the absorption process and to prevent the entrance of sand

hole for holding water. Similarly the construction of an artificial absorption bed in a clay sub-soil is equivalent to providing a reservoir to hold the sewage and it will only be a matter of time until the trenches become water-logged and the sewage backs up into the septic tank.

Underground Filtration

In other parts of the Dominion where nature has been more generous with her watersheds the system of sub-surface distribution is used extensively in conjunction with a surface outlet for the effluent. In such cases the field tiles are underdrained and the subsoil is used as a filter instead of as an absorption bed. The septic tank effluent, after filtering through a few feet of sand or gravel, is collected by underdrains, the action of the bacteria which are present in the subsurface layers of soil oxidizes the sewage before discharge and an inoffensive effluent is discharged into a watercourse or on the ground surface.

Unfortunately this method is incapable of general application in this province, owing to the difficulty of obtaining a surface outlet.

Absorption Field Useless in Clay Subsoil

The treatment and the disposal of a septic tank effluent are two distinct and separate problems which must not be confused. The treatment effected by the action of the nitrifying bacteria in the soil does not solve the problem of disposing of several hundred gallons of liquid daily.

This is the real difficulty which presents itself on the prairie—the disposal

three times in the 24 hours. Taking the daily flow at 180 gallons this would mean flushing capacity in the syphon chamber of 60 gallons or 10 cubic feet or a chamber 3 ft. long by 3 ft. wide by 17 inches deep.

A syphon chamber of these dimensions will be suitable for systems constructed for 12 persons or under. The action of the automatic syphon which doses the sewage on to the field is as follows:

The U trap is filled with water and as the sewage flows into the syphon chamber air is entrapped in the bell which covers the long leg of the U.

FIGURE 4.

FIGURE 5. DETAIL SECTION OF SEPTIC TANK SHOWN IN FIGS. 1, 2, 3 & 4 AND OF SYPHON CHAMBER SHOWN IN FIGURES 1, 2 & 4.

The sewage is prevented from discharging by the weight of the liquid in the short leg of the syphon. When the surface of the sewage has risen high enough in the syphon chamber the resulting head on the bell end of the

or earth at the open joints of the pipes. If gravel is available locally the whole excavation may be covered to advantage with a nine-inch layer before the field tiles are placed in position. Care must (Continued on page 29)

Relation of Physiology to Ventilation

Some Theories of Interest to Heating and Ventilating Engineers
—Alteration of Few Per Cent. of Carbon Dioxide in the Air
Breathed Cannot Have Much Effect on its Suitability for Breathing

HERE are few subjects on which it is easier to theorize than ventilation. Theorizing is easy because experimental work is extremely difficult. Only those who have spent a great deal of time in endeavoring to obtain self-consistent and definite results from experiments on matters connected with ventilation can realize how difficult it is to lay down any definite laws on so complicated and nebulous a subject, said A. H. Barker, B.Sc., at a meeting of the Institution of Heating and Ventilating Engineers, London, England.

Most well-informed ventilating engineers are now aware that the theory of ventilation has during the past few years undergone some very striking and almost revolutionary alterations. I propose in the present paper to discuss some

guard to the fact that expired air is unquestionably deleterious, one is apt to jump to the conclusion, which indeed appears at first sight obvious, that the carbon dioxide in expired air is the poison which is to be guarded against by free ventilation of spaces inhabited by human beings.

Further reflection on the physiological aspect of the matter led to the enquiry how this presumed poisoning of the human mechanism takes place. Analysis of air found in the inside of the lungs revealed the fact that it never varies very greatly from 500 parts of carbon dioxide in 10,000 of air, and that the CO_2 in the blood only varies by a minute fraction, and that CO_2 of animal origin is in no way different from the chemically manufactured article.

In the light of these undoubted facts

already in the lungs. Here it became necessary to formulate some other theory. Various such theories were adopted in succession, only to be disproved; for instance, that the diminution in the quantity of the oxygen in the air had anything to do with the matter. This was shown to be impossible.

It was also proved that there are no organic poisons, bacteria or particles of any kind in the expired air of a healthy person. Naturally diseased persons do disseminate their own specific pathogenic bacteria in their breath, but this fails to account for the undoubted fact, which should never be lost sight of, that it is actually generally deleterious and debilitating to a human being to live in a shut-up space, and so breathe the same air over and over again, even though no specific disease is communicated.

That, however, is perhaps not a perfectly accurate way of expressing the fact. It is not the fact of living and re-breathing the same air which is deleterious, but living in air which is in an unsuitable condition, whether the same air has been previously breathed or not.

The outstanding point to observe is that it has apparently been definitely proved that it is not the alteration in the chemical, nor the bacteriological, nor the particulate composition of the air which produces these generally deleterious conditions, but something else.

So far as its chemical action is concerned, the exact quality of the air appears to be of little moment. The operation of breathing, and the effects produced in the body by that vital function are, of course, chemical in character.

The chemical quality of the air in the sense of its oxygenating power is its important characteristic. The oxygen becomes dissolved in the blood, and this is carried by the circulation to all parts of the system. The food is thereby oxidized, and the energy liberated. But it is easily shown that there is quite enough oxygen, even in extremely bad air, to satisfy the needs of the body in this respect.

For the process to be carried out quite satisfactorily almost any form of air will serve which contains much less oxygen even than extremely bad air itself, and which is not charged with poisonous gas.

Carbon dioxide is not a poisonous gas, as, for instance, carbon monoxide is. The essential reason then why air must be fresh, if it is to be satisfactory for living in, is not that if it is otherwise,

(Continued on page 29)

of these theories in outline, and to point out the effect on design and cost which they would effect if they were adopted.

The alterations in the view taken of the function of ventilation originally proceeded from a consideration of the fact that carbon dioxide, at any rate when not of animal origin, and in moderate quantity, does not appear to exercise any deleterious effect whatever upon the human organism. The discovery itself is not of recent date. It is at least fifty years since it was pointed out by an eminent Frenchman that carbon dioxide is not a poisonous gas except in great concentration.

Up to the time when this view penetrated the consciousness of physiologists it had been customary to regard the carbon dioxide in expired air as the essentially deleterious product, and the introduction of that gas as the cause for the undoubtedly bad effects of living in vitiated air.

The theory was that since a person who is immersed in air having a large proportion, say above 300 parts in 10,000 of air, of carbon dioxide, cannot live, he contracts what is called carbon dioxide poisoning, and as undoubtedly the effect of breathing air is to add to the amount of carbon dioxide in it, and having re-

it appears obvious that the alteration of a few per cent. in the air breathed cannot have such an enormous effect on its suitability for breathing. I show in Fig. 1 a proportional diagram to illustrate these figures.

It was found also that however bad (in reason) the air which one breathes may be, it has no perceptible effect on the composition of the air as maintained in the lungs by the process of breathing. It was shown that the only effect of an increased quantity of CO_2 in breathing air is an automatic one, namely, to cause a person immersed in air in which there is an abnormally large proportion of CO_2 to breathe more deeply as that proportion increases, the degree being somehow regulated automatically in such a way that the proportion of CO_2 actually in the lungs is kept perfectly constant, and that until the concentration of CO_2 in the breathing air becomes so great as to get beyond the capacity of the proper working of this automatic mechanism, no ill effects can be detected.

Analysis of the air in some of the most grossly overcrowded buildings ever found in practice reveals the proportion in 10,000, which is less than one-tenth of the degree of concentration of the air

Heating and Ventilating

Combination Heating Systems

Written exclusively for Sanitary Engineer by N. A. Kearns

(Continued from last issue)

Underground Ducts.

When air ducts are run underground they should be made of permanent materials. If the installation is not very large, these ducts may be made of glazed tile pipe, well cemented at the joints. However, it is only in a small plant when tile pipes may be used. In the majority of cases the underground ducts

must be built of brick or of concrete.

An underground duct of brick is shown by Fig. 8.

The thickness of the side walls must be in proportion to their depths. For a duct not over 3 inches deep, the walls may be four inches thick. When the depth is more than 13 inches, and less than 36 inches, the thickness of the walls should be nine inches.

Before the side walls of the duct are started, the trench bottom should be well

water, field tiles with open joints must be provided and set so that the earth surrounding the duct will be kept perfectly dry. These "weepers" must not be connected to the house sewer; a separate outside drain must be provided.

The concrete floor of the duct is to be built of concrete. The walls of the duct are to be built of hard-burned brick, smoothly plastered with water-proof cement. After the walls are set, the pavement slabs, of concrete, are placed in position and the basement floor finished over the top.

Manholes, or some other means of access to the duct, should be provided so that the duct may be inspected at intervals.

When an underground duct is built in damp ground, or when it is difficult to install a suitable drain, the outside walls

Fig. 6

of the duct and the underside of the trench bottom must be water-proofed.

Size of the Duct.

The area of the cold-air inlet must not be less than three-quarters of that of the combined areas of the warm-air leaders. In fact, it is well, when possible, to provide for an area in the cold air duct equivalent to that of the warm-air outlets.

When an air-supply duct is too small it is often found that some of the lower hot-air registers are acting partly as return air faces. The air which returns by way of the register faces does not pass down to the bottom of the casing; it simply mixes with some of the warm air in the upper part of the bonnet and thereby absorbs no heat from the hot castings.

Return Ducts.

An inside-air-supply duct should always be provided so that the building

may be quickly heated when no ventilation is required.

It is rather difficult to design a combination inside and outside cold air supply because of the difference in temperature of the two currents of air. The outside air being colder than that of the inside is apt to have a velocity

Fig. 7

high enough to fill the entire area of the supply duct and in this way retard the flow of air in the return, or inside, air duct.

Fig. 4 shows a combination return and cold-air supply. The cold air from outside enters by way of the duct "C.A." The return air flows through the floor register. A damper closes the passage "R.A.," while it opens the passage "C.A.," and vice-versa. The damper should be made perfectly air-tight with its edges faced with rubber or felt.

The cold-air duct "C.A." should be covered with mineral wool, or some such insulating material, otherwise the floor above will be chilled by the cooling surfaces of the galvanized iron intake pipe.

Equalizing Valves.

When a cold air intake is situated so that it is subject to much variation of

Fig. 8

wind pressure it is necessary that some form of equalizing valve be installed. Fig. 5 illustrates a suggestion for a valve of this nature.

In this drawing a screen (A B) is shown pivoted at P. At either end of (Continued on page 26)

Fig. 5

graded and tamped down. Broken stone should then be set to form a solid bottom for the floor and footings of the duct.

If there is any evidence of subsoil

Sanitary Engineers on Boards of Health

WHATEVER may be the general view regarding the presence of sanitary engineers on local Boards of Health it is certainly important that more responsibility should be placed on the shoulders of the sanitary engineer and an improved status given to the profession. Plumbing, garbage and refuse disposal, water-supply, sewerage and sewage treatment are problems primarily in sanitary engineering, and require constructive engineering capacity to deal with them.

The encouragement of the sanitary engineer by enlarging his functions and putting him in direct charge of the correction of defective sanitation is necessary to secure the improvement of sanitary conditions. He should be the official responsible for a great deal of the preventive work that is needed so as to overcome the growth of evils that are so difficult and costly to remedy. Most of the defects in housing in Canada are due to neglect of control of sanitation. Sanitary inspectors are too often chosen without regard to their fitness as engineers. If we are to have a better trained profession in sanitary engineering we must give more scope for the men who enter it and the higher standards of pay and responsibility that will attract skilled men. This is no reflection on the important part played by the medical profession in municipal work, but a suggestion that their work should be supplemented by engineers having a special training and knowledge in sanitary work. Certainly the present system of control of sanitation is not satisfactory, and the time is opportune for considering whether greater responsibilities and improved status should be given to engineers on provincial and local boards of health.

Important Sanitary Measures

AT the annual proceedings in the meetings and conventions held by the Master Plumbers of Canada and the United States since they organized, the most important subject discussed was the sanitation of the interior of houses and structures connected with public sewers. It was unanimously held that the end and object of systematic system of plumbing and drainage of a house is to endow it with a good system of water supply, and also with discharge for waste water, and to reg-

ularly flush the interior of house drains with clean water of sufficient pressure.

And it was further resolved that the following essential rules be strictly observed which will free homes from deleterious gases and accomplish the object in view: to exclude from the interior of houses all foul air which arises in sewers; to avoid pollution of the soil by fecal matter, sub-soil and waste waters; to prevent dangerous gases in the soil and in the air below and around the houses; to discharge as rapidly as possible into public sewer all waste matter produced.

The application of these essential rules necessitates a proper plumbing and house drainage system of sewer, waste and ventilation pipes that are air and water tight and which will exclude from the house noxious gases generated in the public sewer; employment of proper material for the pipes of proper dimensions and thickness of all pipes used in this connection. Flushing and accessible cleansing junctions with very obtuse angles should be provided; proper construction of water closets, baths and lavatories free from porous defects, and highest porcelain nonabsorbent grade and finish and other sanitary measures incorporated, as well as facility for access to all interior of house drains, soil and waste pipes for inspection, flushing and testing them with clear pressure water; and in order to lawfully enforce these rules covering the sanitary construction of plumbing and house drains system.

Willing to Take Advice

EVEN the critics of the Minister of Finance and his Budgets are compelled to admit that Sir Henry Drayton is not above accepting the advice of competent business men and altering regulations to comply with their suggestions. True, he was slow to accept the advice of retail merchants concerning the luxury tax as outlined in the 1920 Budget, but that was his first effort along this line, and to make radical changes immediately after issuing it would seem to give evidence of weakness or lack of thought. However, it was adjusted satisfactorily and Sir Henry still contends publicly that the luxury tax served its purpose.

Much the same situation has arisen with the 1921 Budget as recently outlined fully in *SANITARY ENGINEER*. A number of the obvious difficulties of the first proposals were the subject of vigorous protests and this has resulted in a number of changes being made. The plan to allow wholesalers and manufacturers to absorb the sales tax and not show it separately would lead to great confusion, and it has now been definitely ruled that at least 1½ per cent. will be shown on each invoice from the manufacturer or wholesaler. This was the plan early agreed upon by wholesalers and manufacturers in Toronto. The decrease in the sales tax on lumber should also be of assistance in encouraging construction, or at least in removing additional burden on an industry which requires careful nourishing at this time, and this should help the plumbing industry.

Too Many Gas Poisonings Say Plumbers

Plumbers' Union in Toronto Appeals For Investigation of Gas Poisonings—Health Department Takes no Responsibility

"IN the interests of humanity," the Plumbers' and Steamfitters' Union of Toronto has appealed to Acting Chief Coroner George W. Graham to investigate cases of gas poisoning, which the union-officials claim are getting far too numerous of late.

W. J. Storey, writing to Dr. Graham on behalf of the union, points out that these deaths are due either to "poor workmanship, low gas pressure or carelessness," and demands that a full inquiry be held into each death of this nature.

The acting chief coroner instructed Coroner Julian Loudon to make a full investigation.

Dr. Graham has thanked Mr. Storey for his letter, asking him to get into touch with Coroner Loudon and furnish the Crown with any evidence in his possession.

Officials in the Medical Health Department deny any responsibility for gas leakages which have caused a number of deaths in the city recently, stating that inspection of gas pipes by that department is beyond their jurisdiction.

The by-law placing inspection of "plumbing and drainage" under the M.O.H. does not contain a single word about inspection of gas pipes, but officials declare that there is a bill at the Parliament Buildings, which, by the way, has been up there for five years, which would bring gas pipes in houses under the jurisdiction of the Department of Health.

The attitude of the Health Department is that gas pipes, a fruitful source of death, are not inspected by it because the Legislature or the Provincial Cabinet refuse to give it the necessary powers.

One official stated, in reply to a question, that if an occupant of a house complained of a gas leakage the sanitation branch of the Health Department always made an inspection and issued an order on the owner of the property to effect the requisite repairs, such complaints being handled on the ground that the leakage constituted a serious danger, not only to health, but to life. Unless advised of the leakage, the department, of course, would be unaware of the danger.

New Method of Sewage Disposal

Sewage Flows Through Channel Three Quarters of a Mile Long—In Contact With Highly Oxidized Mud

ALMOST every town of any considerable size is saddled with a heavy annual outlay for the disposal of its sewage. For obvious reasons, the town sewers cannot be allowed to discharge their contents into the nearest stream or river; while even on the seacoast shell-fish are destroyed or contaminated by the discharge of untreated sewage. The aim of all methods of treatment is to remove the solid matter and purify the liquid, or effluent, as it is called, so that no damage or unpleasant results follow its discharge into streams. The essential portion of existing sewage-works consists of a number of enormous filters, over which the effluent is sprinkled by means of perforated revolving pipes. These filters are composed of clinker, slag, or coke, to the thickness of five or six feet, and arrangements are made at the bottom so that air can circulate freely through them. The actual purification process is performed by bacteria which grow, in the form of a gelatinous mud, on the material of which the filter is formed; but a plentiful supply of air is needed to

enable them to carry on their function. This process takes up a large amount of land, involves a big outlay for machinery, and entails heavy charges for labor. Consequently efforts have been made in recent years to cheapen and simplify the process. These efforts have resulted in an improved method which has been greatly developed by Mr. John Haworth, F.I.C., F.C.S., the manager and chemist of the Sewage Disposal Department at Sheffield, says Chambers' Journal (England). The method consists in causing the sewage to flow through a channel with an effective length of nearly three-quarters of a mile. During its passage through this channel the liquid is agitated by means of paddles in such a way as to prevent the settlement of the solid matter, and to bring the fluid content in contact with the air at the surface to a sufficient extent to ensure its absorption of the necessary amount of oxygen from the atmosphere. It is also brought into intimate contact with highly oxidized mud containing the purifying organisms, and is thus effectively purified. At the end of the course the purified liquid is

run off continuously. Mr. Haworth compares the action to that of a river containing a very large number of oxidizing organisms capable of purifying putrescible matter. Some of the advantages of the process, compared with existing methods, are: (1) the capital cost is reduced to one-quarter or even one-sixth; (2) the area of land required is reduced to one-third; (3) the degree of purification is greater than that demanded by river authorities; (4) there is no nuisance from smell or flies.

number of equal parts as from 1 to 7. From each point in this semicircle, draw lines to the base as 2¹-3¹-4¹-5¹-6¹. From each of these new points, draw triangular lines to the corners A and B. This divides the elevation into triangles. It does not matter what shape, size or angle you design this boot to, the lines will work themselves out to what you are going to make, by following this treatment.

The next step is to develop the true lengths, and so for this we pick these elevation lines as A-1, 2-2¹, A-3¹, A-4¹ and set as T-1-2-3-4 on the horizontal line. From these new points on the horizontal line square up lines equal to the half sectional line of semicircle as 2-2¹, 3-3¹, 4-4¹, and this gives points 1-2—3-4 in diagram. When lines are drawn to H you have the true length for the lower half of boot. To get the upper half pick those lines as B-4¹, B-5¹, B-6¹ and B-7¹ and set as t-4-5-6-7 in diagram on horizontal line. Then from these points erect lines to suit those half sectional lines 4-4¹, 5-5¹, 6-6¹. After this draw lines from each of these points to h and you have the true lengths for the upper half of elevation.

To set out the pattern draw any line as A-A¹ equal to twice the length of H-T of section per stack. Then pick the true length h-1 from diagram and using A and A¹ in pattern as center, strike and cross arcs in point 1. After this pick one of the spaces as 1-2 from semicircle of elevation and using point 1 in pattern as center, strike small arcs as at 2. Then pick true length H-2 from diagram and using A and A¹ as centers, cross arcs in point 2. With the radius of 1-2 and using point 2 as center, strike arcs as at 3. Pick true length H-3 and using A and A¹ as center, cross arcs in point 3. Repeat and strike small arc 4 from center 3 and then cross this with line H-4 of diagram.

After this, pick the miter line from elevation as A-B and using A and A¹ as centres, strike arcs as at B. Then pick true length h-4¹ and using point 4 in pattern as center, cross arcs in point B. After this repeat the development, using B as center until point 7 is established, and use those true lengths as

NEW PLUMBING GOODS

ANOTHER ADDITION TO LIST OF CANADIAN MADE PRODUCTS

The C. A. Dunham Co., Ltd., Toronto, have placed on the market a condensation pump unit, especially adapted to low pressure steam heating.

The unit consists of a centrifugal pump direct connected to an electric motor, mounted on a cast iron base with receiver and automatic float switch for "Stopping" and "Starting" the Motor.

These units are built in two sizes for 16,000 or less and 30,000 square feet capacity of direct radiation, and for maximum discharge head at the pump of 20 pounds.

The switch is enclosed, of sliding contact type and approved by the Ontario

Dunham Return Pump

Hydro Power Commission, Laboratory License No. 361. This addition to the line of Dunham Specialties is claimed to fill a pressing need, for satisfying the demand for better and more economical heating.

Many steam heating installations have been made when faulty piping or lack of head room between return mains and water line of boiler resulted in poor circulation of steam to the radiators. Many times, the return pipes are so low that it is impossible to return the condensate to the boiler by gravity and has been allowed to waste away to the sewer.

The application of this unit is said to overcome such difficulties and avoids the waste.

NEW FLUID SOLDER

What is claimed by the manufacturers to be an entirely new product for the soldering of all kinds of metals is Wyatt's fluid amalgam. This preparation is being handled and placed on the market by Wyatt's Products, of 225 Richmond street, Toronto, Ont., and the following are some of the claims made for it by the producers.

Amalgam is free from acid, is non-corrosive, non-explosive and non-inflammable. It has no poisonous fumes and will solder any metal or combination of metals, with the exception of aluminum. With it, in conjunction with solder, repairs of any kind can be made. It is

said to be specially adaptable for repairing leaky pipes, boilers (domestic), radiators, farm implements, automobile parts, electric and other wire connections.

The mending of band saws has generally been considered a difficult task to properly perform. This the manufacturers claim amalgam will do without affecting the temper of the steel. Being practically harmless, it may be handled with impunity. The product is put up in bottles up to 8 oz. sizes, and in tins from pints to gallons. Free samples are being distributed.

SUGGESTS BETTER LIGHTING FOR DISPLAY WINDOW

Merchants' lack of taste and foresight in window illumination was emphasized by an electrical engineer in a recent address in Toronto. His principal criticism was that the apparent objective of the business man was to create a glare which would outshine that of his neighbor.

He criticized the strong, unprotected nitrogen lamp window illumination as so dazzling as to repel customers. The source of illumination, he said, should not be seen at all, the light being gently reflected on the goods from above.

COMBINATION HEATING SYSTEMS

Continued from page 21

the screen there is placed a shutter (S). The area of the screen is greater at A than it is at B. Now, when wind drives in with some force it will depress the screen at A, and this will partly close the openings by the shifting of the shutters. A movable weight is shown at W. This weight may be adjusted to suit the pressure that should exist before the area of the openings need be reduced.

Back Check Valves

When a return-air duct is used in connection with a cold-air intake it will be necessary to plan a back-draft damper in the return-air duct. This damper is to prevent the cold air entering the house by way of the return-air duct.

A back-draft damper may be arranged as shown in Fig. 6.

In this drawing the letter S indicates a screen of galvanized wire stretched on a light wooden frame. The letters "d" indicate narrow strips of oiled silk with overlapping edges.

When the air is passing in the proper direction its force will hold the oiled silk checks away from the screen. A back-draft will close the silk checks against the screen.

Air Filters

Where there is danger of dust entering the cold-air inlet, some arrangement should be made whereby some of the dust may be removed from the air.

A screen of cheese-cloth may be set in a wooden frame, whereby provision is made for the easy removal and frequent washing of the cloth. A cloth screen must be washed very often as otherwise the dust in a short time will entirely close the pores of the cloth.

The area of the screen should be at least ten times that of the fresh air inlet.

Fig. 7 shows how a dry filter may be installed.

The cold air enters the room by way of the screened opening A. It then passes through the filter B.

The filter cloths are set in a wooden screen backed with galvanized wire screens. The purpose of the screens is to prevent the bagging of the cloth.

The filters are set diagonally to the fresh air intake so that a greater area of filter may be provided than would be possible were the screen placed at a right angle to the line of direction of the air current.

PRACTICAL HELP FOR TINSMITHS

Continued from page 23

h-5-6-7. When this is done, pick the half length of stack as H-T and using B as center, strike arcs as at B¹. Now pick the elevation throat line as B-7 and using point 7 in pattern as center, cross arcs in point B¹. This enables drawing the outline of pattern as shown. After this, we add the collar above the miter, as A-D and B-C, by using these distances as radii, and describing arcs from A, B and B¹ as at D-C-C. By drawing lines tangent to these arcs and squaring out your miter lines you have the entire lay-out finished.

The 2 piece angle which fits to this round end, can be made to anything or preferably 2 pieces of 4 piece elbow are generally used, but this is an after consideration and the workman will have to adjust this to suit his ideas of installation.

TIN.—Activity in foreign markets, which followed the favorable outcome of the reparation negotiations, led to a further advance in the price of tin. This is reflected in Toronto by another two-cent rise, the quotation now being 40½. Although the tone is stronger, activity is reported to be quiet.

COPPER.—United States sources report that a strong tone prevails in the copper market. Prices still trend upward under an improved sentiment and strengthening conditions. The foreign situation is reported as decidedly better, with domestic consumers relaxing. Toronto indications are practically unchanged, with many inquirers reported, but few actual buyers. Quotations remain at 18 cents.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights—Keep the Entire Series Where It May be Referred to and Studied

Article No. 32 of Series—Illustrations No. 38, 39, 40

(Continued from last issue)

ALL vitrified pipes should be well jointed, the utmost care being taken in order to obtain a thoroughly watertight joint. The cement used should be of the very best Portland, free from excess lime.

The cement may either be neat or in the proportion of one cement to one sand—never more—and the joint should be carefully cemented, not only on the top, but all around, including the invert, as the lower part of the pipe is usually carrying off the sewage, consequently should be perfectly watertight. Especial care and attention should be given by the workman before making the next joint that none of the cement has been forced into the interior of the pipe, otherwise it will always interrupt the proper flow of sewage and lead to obstructions. A pipe scraper made of wood struck to the radius of the pipe should always be used by the pipe joiner for scraping out all surplus cement that has oozed through the jointed pipe.

All pipes, when laid, should be well inspected and examined by some competent person and the various lengths

occurs) to cause fracture to either the pipe or joint. There are various patented joints on the market composed of bitumen, asphalt, etc., which can be utilized in wet soil, running sand, etc., and which undoubtedly give better results in bad grounds than the rigid cement joint, as the latter will not give in the least and any movement of the pipe after laying means the cement

above the water line, and will in time lead to a blockage of the pipe. These junctions are made and carried in stock for all standard sizes and can be easily obtained. Under no circumstances whatever should a connection be made by knocking a hole in the main drain.

Pipes, whenever possible, should run in a direct straight line and if possible all bends should be avoided. In the majority of cases this cannot be carried out in practice and then the curves should be made as easy as possible by installing standard regular bends and it is very poor construction to use the straight pipes for overcoming this difficulty. Same can be used by the space left in the socket but it makes a very bad joint, both internally and externally,
